I found this one channel on 454.300MHz. Day and night I always have an image(my scanner stops), but its just a high pitched whistle. Every 10 seconds or so I hear digital beeping and buzzing and static then back to the whistleeeee.
What is this?

Also, how come sometimes in the fire dispatch channels around 46.00 I hear strange humming which even if I turn squelch to the highest it can go, the humming is still there.

And what are thoes horizontal antennas on fire and EMS building? I see them sometimes on towers too. The radiating little antennas are sticking up and down and the actual poll is supported on its side (u get the picture)

Thanks
Dave

Most likely you are exceeding your bandwidth that you are allotted with the free site. Allotted bandwidth can be quickly drained when providing files for download, especially... It would be best to host the software aspect of your site somewhere else, like http://www.5megs.com or someplace similar...

Here are a few lists of places:
http://www.freewebspace.net/guide/diskstorage.shtml
http://useful.webwizards.net/wbfs.htm

i mean does anyone have a program that decodes DTMF into numbers or know where to get one. Also i ment punched, not punced.

7. FS VU21m surveillance receiver

Newsgroup: rec.radio.scanner
Date: 2002-07-01 01:50:57 UTC
From: Richard <translations@qdnet.pl>
Message-ID: <afoci9$60f$1@news.tpi.pl>
Source record: 46545

I have stumbled across a VU21m surveillance receiver made by ML of Hungary that covers 20-100Mhz that was used by the secret police in the old communist regimes (poor old radio Solidarnosc, a few of them were busted with these rigs !). It is all mode, made in about 1982, all transistor, complete with PSU 220-24v, fully working.

Asking price is 190 GBP, which will include shipping over land (7-21 days). It is a
base type of unit about 30cm by 40cm by 20cm high, 20kg. This is the surveillance type, not the e-warfare type of receiver. Tuning is obviously analogue in 10khz steps. I am sorry I do not have a picture, but those who know about this rare receiver, know about it!

Yes. Indeed, I was actually talking about voice inversion. Where can I
get the hardware/software for voice reversing that can be used with
Icom R2?

Thanks

Hey, smart-guy! You want your lawyer to contact someone? Have him contact me! I'm a lawyer too. I'd be glad to find out just what he thinks your position is in this matter. Don't make cheap threats you can't back up, pal. And while your talking to your lawyer have him read you the stuff on cyberstalking, threats, harassment and invasion of privacy. If I were you, I'd be a good deal more concerned about that than I would about Glenn's characterization of your efforts on behalf of Antenna Warehouse.

I have downloaded the voice descrambler
http://iz8bly.sysonline.it/VoiceDescrambler/index.htm.

How do i go about descrambling the inverted voice from my Icom R2
scanner.

Which part of the computer should my scanner input be connected?(I

actually don't see anywhere in my computer where my scanner can be
plugged

in)

Thanks

In order to do what you want, you will need a patch cable (simple mono mini-plug on each end available at Radio Shack or similar for about $4 to $5) to go from the headphone/earphone jack of the scanner to the mic or line-in on the sound card in your computer. You will be listening to the scanner through the speakers you have connected to your computer...

I have a Microtek scanner at work.....and need to scan a logo cut from a magazine.

The logo has been carefully cut with scissors so that it follows the exact shape of the image.

However.....when I scan it.....alll I can do is draw a rectangle around what i want scanned....as a result it has a black background behind....whereas all I want is the exact shape of the logo.

What do I need to do to get the results I want?

Hello "The Wizard" Wizard@walesuk.net

You might enjoy reading the attached emails from June 13.
"Might sell" is not mentioned, but "will sell" is.

Also, could you please post the Gazette Reference for the new law
that says eBay is the only place to make legally binding contracts.
"Offer and Acceptance" predates eBay. Look it up.

Why is he a cry baby? It's pretty clear you said you you'd sell him
the antenna. I would definitely think twice before trading or buying
anything from you. You might decide to back out again.

Yes I changed my mind. He wanted me to ship it to Canada for $10 and I
wasn't interested in selling anyway. My original ad was to trade the Sony.

>
> Any ideas??

Such a connection probably won't work. The headphone output from your
scanner
has been processed and no longer has the bandwidth to decode digital
transmissions.

You will need to tap the discriminator from your scanner then feed it's
output to the
mic input of your soundcard. Discriminator tap points for a large number of
scanners
are at:

http://www.hoka.com/discriminators.html

Second, it would help us to know exactly which digital mode you are trying
to decode.
A list of digital samples is at:

http://www.kb9ukd.com/digital/

Third, you'll need software - for pager decoding try this:

http://home.nikocity.de/go/poc32/

For decoding police mobile data terminals (MDT's), try this:

http://chroot.ath.cx/fade/projects/decoding/

Look down the page for "mdtmon.zip".....

Good Luck!

Ken

DeWayne

The last time I heard the term "cry baby" was in the second grade.

For the record, you responded to my offer to buy the AN-LP1 and
stated your price as $80US, which I agreed to.
It doesn't matter what your original ad said.

I waited from June 13 to June 20 for you to respond
with the amount for shipping.

On June 16 I sent a followup note inquiring about the amount for shipping.

No response.

On June 20, after receiving no response from you, I suggested $10US for shipping.
Remember, this is $10 for US Parcel Post, not FEDEX.

I received a return receipt indicating that you read my email on June 20
at 9:35pm.

Still no response from you.

Finally, on June 29 you put an AN-LP1 up for trade on Usenet, and I called you on it.

Your response was to call me names. How old are you DeWayne?

Now DeWayne, let's roll the clock back to June 13 when you changed your mind.

You could have done me the courtesy of an email indicating you changed your mind.
I would have responded, "Gosh DeWayne, I'm sorry to hear that".
End of story. Your reputation pretty much intact.

Instead, you continue to act like one of these cuddly forest creatures...

I have a spot for one more antenna and thinking of another Discone.
I've had the AntennaWarehouse and the older RadioShack (both without the
vertical element as my primary freq range is 138 MHz and above). Both
these antennas preformed well however the RadioShack fell apart during a
storm and the AntennaWarehouse is in the attic and being used for local
Civil Aircraft.

Now my question is this, what is the best discone money can buy
remembering that I don't care about the anything less than 138 MHz?

George

Seems to start scanning after a signal appears on freq. AFC is off.
Most strange, 1 week ago it was fine.

Two things come immediately to mind.

First, who has something to say that is fascinating enough to go to
the effort?

Second: The "security" code used in low-end cordless phones is,
typically, used only to make sure that the handset from one unit cannot
access the base from another unit and vice-versa. If you're really bored
enough to want to monitor the traffic, any good scanner should be able to
do it for you.

Hello,

One of my favorite programs for decoding digital signals is PDW v1.10F
available at http://home.kabelfoon.nl/~pdw/alp/.
It's freeware and it decodes POCSAG/FLEX/MOBITEX/ERMES and ACARS signals
through the soundcard or serial port. About a third of the way down the
page you'll see the download link for it. To decode pocsag 512/1200 and
ACARS with this program you do not need a discriminator tap. The
earphone jack connected via cable to your sound in on the computer will
work for the slower POCSAG speeds and ACARS. The ACARS frequencies are
in the help manual with this program. ACARS transmissions are digital
signal from aircraft. There is another digital mode which you can also
receive with your setup (no tap required) and that is Amatuer Radio
Packet which is primarily in use between 144MHZ and 146MHZ. There is
freeware available for this also.

The help file that is included with PDW v1.1.F is very very good,
especially for a beginner.

What about the 65536 combination security coding on 43/46 cordless ?
Aren't they digital? How to decode them ?

Thanks

I love my Yupi MVT 7100. Had it for many years and thousands of miles.
It could use a new case, it's been dropped, banged up and the battery
cover is broken (duct tape works...) but it keeps on working.

It's great for camping / hiking since I can check on the weather, listen
to the forest / park rangers and my favorite SW, FM, AM and TV (audio)
stations. It's a great bargain for the price too.

For local around the town scanning I use my Bearcat BC245XLT for
trunking and the Yupi for other freqs.

Cons: No PC interface, no ferrite antenna (for AM) and the scanning
speed could be faster.

I'd buy another (I'm planning to...) in a heartbeat.

CUL,
-barryc

Then for an omni-directional antenna what would you suggest for someone
who spends 99% of his time monitoring 138 - 400 MHz? (mostly MilAir band).

Exactly, scantenna in the USA sell a "nest of dipoles" which looks very interesting - esp tuned for scanner frequencies at the cost of broadcast bands hence, in theory less interference from broadcast bands. I bought a skyband discone which was hopeless. At great expenses I order the scantenna beam aerial. Maybe some shop wants to stock these aerials ? They are cheap and look half decent. If there is sufficient interest maybe a group of us could invest several at one time to cut costs?

There are different kinds of trunk codes. Motorola type II uses
Talkgroups while EDACS use fleetmaps. You have to program in the
frequencies for the area you want then you can search for the fleetmap
you desire or type them into a list for later scanning. Look at the
site www.trunktracker.com to learn the basics and to get some
frequencies. Radio Shack has book and CD of frequencies. Hope this is
of some help. I am just learning and right now I am not pleased with
trnking because it is so much harder.

Here is a very nice PRO2006 scanner (mine!). This one does not have the frequency limitations of later PRO2006's. The display is bright and the unit is in "like new" condition. Includes all original accessories, manuals and even the carton. Also includes the rare PRO2006 service manual.

Go to the following link and cast your vote for unrestricted access to frequencies by bidding it up! (I have no shame!)

Go to this site and see if your location is listed.

http://www.trunkedradio.net/

If your city is listed put in the frequencies first then the fleet maps or
talkgroups.
I have used this for the Denver area and both Motorola and Edacs systems work
perfectly on my Pro-93.

Did you program the frequencies by logical channel number starting with 1
and leaving channel 0 empty?
Unlike Motorola, which starts with channel 0, Edacs never uses 0, and
always starts with channel 1.
Confused yet?
Lots of info on Riverside Ca. here;

Yes, very confused...I have a PRO-93 that has 30 channels per bank. I
understand you to say that I should leave channel 700 unprogrammed and
start in 701. I entered the freqs in the order in which they are
listed in Police Call. Riverside SO apparently has three systems, but
I only hear the first one. Do I need to program each system into a
separate bank? I didn't do that.

Thanks

From the manual :
1.Turn off the scanner.
2. While you press and hold down the 2 and 9 keys, turn on the scanner.

This procedure clears all the information you have programmed in to it.

It worked the last time I tried it. Hope it works.

My opinion, for what it's worth.
Pro-94 made by Uniden (I think). No alpha tags and No computer
programming.
2- No, answers
Pro-2053 made by GRE, has Alpha tags and computer programming.
2-good points to have.
Pro-2067 also made by GRE, has Alpha tags, LTR (Johnson) capabilities,
computer programming and CTSS/DCS decoder built in.
4-good points to have.
Two more scanners to consider. Pro-93 is the handheld version of the 2053
and the Pro-92 is the handheld version of the 2067.
I bought the Pro-93 as I did not need LTR or the CTSS/DCS decoder and
wanted a handheld.
I an very happy with it.

Ok, here goes.
I also have the Pro-93 and it works very well scanning the Denver Edacs system.
I used this site for info and don't know anything good or bad about Police Call.

http://www.trunkedradio.net/

About half way down the page choose your state and then Riverside is listed on the next page.
Put in the frequencies for the closest transmitter site to your location starting at 701 in bank 7.
Go ahead and test it at this time to make sure it captures the Data channel and trunks. You don't need to put in the Fleetmaps or Talkgroups yet.
Once it is working and showing Talkgroup numbers when it stops on a transmission, then it is time to put in the Talkgroup info. You won't be able to put them all in as you only have 100 spaces per bank for Talkgroups and there are way more then that for Riverside. (I hope you have a computer programming cable)
There is also forum for you to go to if you need to ask more questions from others that might help you from the Riverside area.
Hope I helped a little.

I have two PRO-94's and love them. As I have other scanners for Military monitoring (were Alpha tags

come in handy) I found Alpha tags really aren't needed for most of your typical Police/Fire or Trunk systems. However that is personal preference.

Regarding the PRO-92. I know when it first came out there were ALOT of people who did not like the scanner and were really putting it down. If I remember it has something to do with it did not follow trunking systems very well and would drop a lot of conversations. The PRO94 is rock solid in this respect.

If I remember it correctly the first issue of the Pro-92 had a different way of scanning then by reading
the Data channel.
The next software version corrected that.
If I am wrong someone will correct me.
I am not saying that the Pro-94 is a bad scanner, I am just saying that it does not have alpha tags and
computer programming which for a lot of large trunked system is nice to have.

I reviewed the Alinco DJ-X3T in March 2002 Monitoring Times
magazine.

The one I tested had better audio than the thinner
DJ-X2T, but both suffered from an annoying squelch tail
noise.

The internal bar antenna gave the DJ-X3T an edge over
the ICOM IC-R2 and Yaesu VR-500 for AM broadcast reception.

I found the "bug detector" of little value. Personally, I
prefer the ICOM IC-R2 because it has CTCSS squelch,
uses only 2 AA cells (instead of 3) and is smaller
and lighter.

Alinco offers one free cloning program, but there
is a wider variety of both free and commercial software available for the
IC-R2.

Suggest you also consider a Yaesu VR-500.

That brings me back to asking what's more important, alpha tagging or having 1000 channels. Would I be better off waiting for a unit that has both? Maybe there is one and I'm not aware of it. If so, please let me know where I'd get more info on it. Thanks.

Yes, in general, each system needs to be in a separate bank.

If you could only hear one systen at a time, then you could probably put
several systems in the same bank. But if you can hear more than one
system at the same time, they need to be in separate banks in order to
work properly.

What is your primary type of listening?

Unless you do a lot of traveling or do a lot of Military Listening I
really won't find a need for 1000 channels.

I do a lot of Military monitoring, have 10 scanners infront of me with a
total combined channel capacity of 7000 channels and 130 banks. Now I
don't have 7000 freqs to monitor but I do have stuff programmed into ALL
130 banks and at times finding myself where I could use a few more
scanners. But again, it all has to do with what type of listening you do.

If I were just interested in Public Saftey and only traveled between a
few cities I would only need a few banks with about 50 channels per bank....

It is unlikely that you would ever use 1000 channels. Even if you did,
how do you keep track of them without alpha tags? And how long does it
take to program that many channels without a computer interface?

In my location, I fine the CTCSS is extremely useful because we have
many neighboring agencies on the same frequencies. For example, a
neignboring town and the state police from the neighboring state 40
miles away share a frequency, but with different CTCSS tones.

The PRO-92 and 2067, and Bearcat 780, have the CTCSS.

The PRO-93 and 2053 do not.

Durham Radio's sale price is $395 Canadian funds and when you add taxes to their price, it comes to $454.25, not factoring shipping, I'm asking $300 Canadian funds, private sale, so the buyer saves $154.25 if they were to purchase one from Durham Radio (http://www.durhamradio.com/bc895.htm), I really only want to sell to someone in Ontario to save both the buyer and the seller shipping hassles across the border etc. I think my price is fair, but I appreciate the input.

Jason

I was thinking MOT systems here. EDACS systems definitely need to be in
different banks. LNC1 has to be in channel xx1, LCN2 in xx2, etc.

If I remember it correctly the first issue of the Pro-92 had a different way of scanning, then by reading
the Data channel.
The next software version corrected that.
If I am wrong someone will correct me.
I am not saying that the Pro-94 is a bad scanner, I am just saying that it does not have alpha tags and
computer programming which for a lot of large trunked system is nice to have.

Get a 2 meter ham omni, it will amaze you, unless your radio doesn't take
a big signal very well, then it will totally overload it. I have a
Cushcraft ARX-2B, a big antenna, and it hears really well. It's not the
greatest, strength wise though, but it's been up there 10 years now.

IMHO, 1000 channels is overkill. It becomes difficult to work with that many channels, especially as the number of channels per bank increases. Here's my personal feelings: 300-500 channels with computer control including alpha tags and CTCSS. The computer control allows you to upload/download customized channel layouts, which effectively gives you many thousands of channels. If you are trying to keep track of 300 to 500 channels, then alpha tags is almost a necessity (it is for me). CTCSS decode allows you to thin out the traffic on frequencies with multiple users. Hope this helps.

If you don't need digital capability, and are only interested in trunked systems,
there's really no need for 1000 channels.

I have both, along with several other models. I use my 2053 as a base.
Others for mil freqs. (R2 or Pro 26) I never use my 94. I may give it to my
ex as she enjoys scanners, also.
Does that help?

Is it possible to export a radio signal from my stereo receiver to the line-in input on my PC sound card? As far as I can tell, the radio tuner feature of my receiver outputs only to the speaker wire. Must I jack the speaker wire directly into the sound card input or can I do something else? Thanks.

Subj: Delta II launch From Cape Canaveral this morning.

It is 2:12am. The Delta II is supposed to launch at 2:47am.
In prep for the launch, Weather One is up on 133.8, 125.9, and 118.625. He has been in comms with Cape Control and with Range Weather.
Bat 2 and Bat 4 (security/surveillance acft) are up on 126.65 and 133.8. They have been in contact with Variety (RSO) and with Cape Control. A couple of fishing boats and barges were near the launch danger zone, but no major intruders so far. The barges have since been identified as part of the dredging activities going on at Cape Canaveral.
Moments ago the acft were warned about a weather balloon that has been sent aloft from Cape Canaveral AFS.

Which of these two radios would you suggest is better? Particularly if I am connecting it to a wideband antenna on a mast?

Thanks,

Hello,

I have some question referring to the YUPITERU models,
As far as sensitivity, selectivity and other technical parameters,

Is the MVT-7300 better than the MVT-7200 and MVT-7100? <== I already
know that the MVT-7300 covers a frequency range more wide.

The MVT-7200 is better than the MVT-7100 and MVT-7300?
or simply, the MVT-7100 is the better handheld from YUPITERU
and finally,

That you say to me of MVT-9000 MKII?

Thanks & greetings,

Trondheim

> Ever hear of an isotropic antenna?

It's all quite relative isn't it? You would need instruments to hear the gain difference between a quarter wave monopole and an isotropic (if you could make one). From memory, a quarter wave ground plane is about 1.5dB better than the isotropic radiator.
Discones, well made, fall right around the gain of a 1/4 wave G.P.- not at all bad when you consider the VSWR BW.

The ICOM software I saw for the R3 was the worst I have ever seen.
Does anyone else offer programming software for the R3? I think there
was Dutch(?) company that had a program but it looks like it hadn't
been updated in years.

118. Ute Listening and decoding on R75

Newsgroup: rec.radio.scanner
Date: 2002-07-03 13:50:04 UTC
From: "Keith D. Thomas" <bikealot@erols.com>
Message-ID: <0uv5iugstsbloamu8o8adh4itct9paseii@4ax.com>
Source record: 46409

I have had my R75 for about three weeks now and am having a blast. The DSP filter offer was still in effect when I purchased it, so I sent off the card. Hopefully it will be here soon.

I have been listening to quite a few shortwave broadcasters while I work at my desk. However, I have become very interested in Ute's and other digital transmissions. I have managed to decode a little bit of RTTY and PSK31. I need to get a better outside antenna and am working on that.

I have been looking at the ute loggings on the www.wunclub.com site and am impressed. It looks like they decode ALE and a bunch of other stuff to the point of where they can ID the sender etc.

What do people use to decode signals? Is there a good hardware device that makes it easier? So far I have used MMTTY and DigiPan along with the soundcard in my computer to do a little bit..but it seems hit and miss.

All thoughts on this aspect of listening would be appreciated.

Keith

I think the gent who posted the query is Spanish? Maybe his literature is in English and he can't quite grasp it? Maybe he is not familiar with what the specs actually mean? Etc Etc?

If you can't be helpful then I suggest you don't reply at all you asshole...rather than smart alec sarcasm like your above comment.These newsgroups are for experienced users and novices alike. I note you didn't answer his questions...presumably because you don't know that much either?

I don't pretend to be an expert on scanners or specs. But for my money I would get a Yupiteru 7100. That doesn't answer the gentleman's original questions but I hope its better than the arrogant reply that ' MK ' made.....

The 7200 is regarded as better than the 7100 as it had, among others, slightly better filtering, but is a fairly rare scanner - never seen a new one for sale. Once you go above 7100 do not "waste" money on the next sexy looking model, but go for a real base scanner than has filters and stuff built in so it resembles a comms receiver like an ICom R7000 or 7100, as for 300-400 quid you will not get a better buy.

Yeah, but on recieve the SWR doesn't really matter unless it's really out
of whack, and I've never seen any ground plane, even one I made out of an
SO-239 and some junk wire that wouldn't blow a discone line the
Icom/Diamond one out of the water, and one of the Ringo Ranger types and
others will easily beat a ground plane.

If you aren't in a BIG metro area, 300 is probably enough. Any of the
big cities, and you will eventually want more then one radio anyway, so
300 is probably a good choice, by the way, the 93 is a great radio, for a
newbie, the alpha tags are a real help...

I agree with Richard, the 7200 is brilliant scanner, with better filtering
etc than the 7100, but, as he says, getting hold of one is a different
matter. I, like a fool sold mine, I wish I hadn't. but isn't that mostly the
case. Mind you, the 7100 is still a very good scanner, just that the 7200
has the *edge*
good luck

I like the PRO-93 for one major reason. It allows me to scan
conventional and trunked systems all in the same bank. I was told
that the -92 and -94 didn't have that capability. This is very
helpful to me, as I have agencies in my local area that are not
trunked.

I also enjoy being able to see which agency is transmitting. It makes
it less confusing when 10 police agencies share the same trunked
system.

Don't know anything about the UBC3000XLT, but I use a VR-500 with a discone at 25' on a mast. I have to use the built-in attenuator to avoid overloading it...without the attenuator, it is almost useless. Fortunately it does have that feature...and it's sensitive enough to get a lot of performance out of a decent telescopic whip antenna (forget the stock antenna; it's not very good). You'll also need a proper HF antenna for any reasonable HF performance.

Whenever i connect the BC780 external speaker to my computer line in, i get a loud humming noise on the computer. It also does this with the tape record jack. Volume level on the scanner has no effect on the hum. Anyone else have this problem? My pro-2050 headphone jack to line in works fine.

I prefer the Yaesu. It appears more sensitive on VHF and UHF in particular, the drawback being that the controls are not straightforward due to the use of the 'function' key at the side for a lot of things. In particular it makes it hard to use one-handed (no ribald comments thanks!). I don't use an external antenna with my VR-500 as I have an IC-7100 on the bench, and the VR's antenna is adequate in the car. However there's no reason why the mast antenna would make it a great set-up.

All up though I am really happy with mine, having sold off my 3000XLT to the brother-in-law, which made the Yaesu that much cheaper!

Cheers.

Ken

I have a military AT-197/GR discone that is built like a tank. It has 12
elements on both the cone and the disc. I will put this antenna up against
any other discone in a hailstorm. This one survived golfball-sized hail.
The hail just shattered against it.

With all the Race Drivers and fans flying into Daytona International I'm
broadcasting live audio of Approach and Tower. Its been non-stop!
For the live audio go to http://www.MilAirComms.com

On July 6th I will be broadcasting live Driver/Crew In Car audio of the
Pepsi 400.
To listen to the Crew and Driver comms during the race adds to the
excitement
while watching it on TV.

????

If the "Tape Record/Out" jack is not for connecting to other audio
equipment (i.e., a computer sound card) what the hell is it for?

"Ext Speaker" is for connecting to speakers.

"Headphone" is for connecting to headphones.

"Tape Record/Line out" is for connecting to audio level inputs, like
sound cards.

Yes! I then switched to a shorter cable (just long enough to reach the computer from the 780). Also I used Shielded cable and that fixed my problem.

In fact I have my live broadcast running right now with that combination on my 780. You can hear how it sounds at http://www.MilAirComms.com

My stereo receiver has a tape output that would work, it also has jumpers to seperate the tuner and pre-amps from the power amps and the pre-amp outputs would work to feed a soundcard. Of course that's a 30+ year old Kenwood and I don't know what you have available on your receiver.

On Wed, 03 Jul 2002 05:14:24 GMT, "SmarSquid" <smarnado@hotmail.com> wrote:

the 7200 is worth it if you can get it,but if on a tighter budget then the Yaesu VR500 and Jup 7100 are the 2 choices,the 7300 is reasonable,but not worth what you pay extra over a 7100.

the 7100 does suffer on 160-170 Mhz pager breakthrough in the UK,but with the use of the right aerials in the right situatiuon and individual attenuation on each memory channel,then most of this can be dealt with.

the filtering is pretty good and on birdie freqs in vhf airband for instance,there is a birdie on 129.400 Mhz for example,by retuning to 129.399 on 1 Khz steps the problem is solved and the audio from Air traffic is recievable again,most scanners do not allow this and the birdie freq would still be radiating on 129.399/398 etc.

this i used succesfully on virtually every problem freq on the 7100.

handhelds like the AOR8200 Jup 9000 and Alinco DJ-X2000 are certainly worth going for,base stations are not very portable hence there name,the scanning features are generally less well thought out,not enough memories etc,not easy scan bank links,on the more expensive handhelds memory bank and search bank links are well thought out.

filters,i have loads on one i have,but switch between the filters and i do not notice any differance.

depends whether you want scanning features or monitoring features.

best handy at the moment for a real proffesional scanner handheld,good perfomance low band to 800 Mhz then the Alinco is the one.

2000 memories
ctcss as standard
3 mins of recording for those vital catches
variable delay and pause times
variable priority sampling times
freq counter
flash tune
alpha tags and alpha tag search
computer variable bandplan allowing duplex on vfo a and vfo b

you set up correctly for your country

i type in 456.450 on vfo a and on vfo b 461.95 the split appears.

bad points

audio a bit hissy but you get very much use to it
scanning a bit slow but improved with freqs placed in freq order.

_____

software free of charge and extrememly good.

Hi all

I might be new to reading this newsgroup, but had to say something about
this response.

In a nutshell if he couldn't figure out that ENGLISH is NOT this persons
first language, then maybe they ought to go back to school or correspond
a little with people from other countries instead of stupid
unintelligent demeaning remarks.

A hint may lie in their grammar or maybe in the email address.

Hopefully in a couple of years from now we will all be able to scan digital signals (APCO25 anyway) as we do today with analog, but will happen when those digital signals are encrypted? Will our home PCs at the time be able to decrypt 64 or 128 bit encryption? Is anyone working on this problem now?

Just curious.

Hi,

I wonder what handheld would be best suited for use with air traffic, trains, and police/emergency listening. I assume a trunking scanner is a must. So what is the best buy considering both quality and price. I will check back to the group, as I have the return address masked.

Thanks in advance,

Ed

From StrongSignals.net

Cortland Richmond, KA5S, sent in the following link to a Stars and Strips article which highlights how US troops are using FRS radios in the field and are very well paying the price for it. As Cortland put it:

Ther are reasons why using FRS radios are a bad idea. One is that peple forget they are being listend to -- operational security. Another is that theyr'e not allowed by the military. A third is that they are not permitted by European governments. (Europe apparently has a similar service at 446 MHz.)

I've written a Letter to the Stars & Stripes which I'm told will run next week.
I'm also told that soldiers who talked to the Stars & Stripes about this got in hot water, either for talking, or using non-regulation radios -- or both.

Thats right.

European service is like this:

All 446.XXXXX MHz

1: .00625
2: .01875
3: .03125
4: .04375
5: .05625
6: .06875
7: .08125
8: .09375

Regards from Brian.

Yes, Uniden has a limited digital scanner that will or should be on the market by the end of the year. See http://www.snowcrest.net/marnells/uniden-digital.htm . The trouble with the inscription system that the police use up here is that they change the codes twice daily from the e-com center. They also change the trunk hops regularly. They also send data and voice on the same system so you would have to be able to separate them. One other neat thing that they can do is if a radio gets stolen they can shut the radio down from the center and make it useless. I think it will be a long time before you will see a scanner that will be able to do all of that and switch channels as fast as a scanner does now. The good thing with this system is that it is only good for short range so High-way patrols will still have to rely on the old analogue system for a while.

175. Need help getting aircraft Frequency

Newsgroup: rec.radio.scanner
Date: 2002-07-05 03:27:18 UTC
From: Topflight70env@yahoo.com
Message-ID: <3d251003.95227738@news.lig.bellsouth.net>
Source record: 46315

Hey Guys,
I live about 35-40 miles from GSP and Greenville Down Town (GMU) airport. I have a base and a handheld that will pic up the frequescies. 119.9 for GMU, but I can only hear the aircraft coming in and not the tower itself. I have am omni directional antenna on my roof which puts it at about 25 to 30 feet (base) above the ground. Around 50 feet of Tandy RG-58 cable from antenna to scanner. I know the towers antenna is at least 75-100 feet above the ground. I'm wondering why I can't pick it up. I would think that the high would be enough to take care of the "curve of the earth" stuff. I can pick up the 135.35 freq out of owens with out any problem for atlanta center. It;s about 25 miles from me. I get comtroller and pilot talking on it.

Anyway, anyhelp getting this freq (119.9) to come in would be appreciated.

Thanks
Top

Message-ID: <3D251869.460FCBB0@optonline.net>
Source record: 46316

TX antenna height = 75 ft
Distance to "radio horizon" = SQRT(2 x 75) = 12 miles

RX antenna height = 25 ft
Distance to "radio horizon" = SQRT(2 x 25) = 7 miles

"Line of Sight" Reception range = 12 + 7 = 19 miles

Very unlikely you will be able to receive the tower.

Walt

And if the radio is not properly encrypted, it is still a violation of
DoD policy and regulation, wherther local laws are being adhered to or
not.

The fact is, if its a COTS radio, its wrong.

(Soldier Intercom *should* be wrong too, per the encryption issue.
Still looking into how that came about.)

>the 135.35 freq out of owens with out any problem for atlanta center.
>It;s about 25 miles from me. I get comtroller and pilot talking on it.

Please remember that these tower to aircraft communications generally
use antennas that avoid transmitting too much energy toward the
horizon. This is different from most land mobile applications.

Also remember that they try not to use too much power because they
already have line of sight communications and the frequencies need to
be reused without excessive skip or interference.

So to answer your query on why you can't hear the tower: It's too
weak, and you're too far over the horizon. If you still wish to give
it a shot, try building at least a 4 element yagi antenna and pointing
it at the airport. You should also try using a better transmission
line. The RG-58 stuff is really only useful in short runs. I suggest
using RG-6 (better) or Belden 9914 (better still) or if you can find
it, some surplus CATV hardline or Andrew LDF4-50.

Good Luck!

Can I have any problem with the reception of the aerial band with a YUPITERU MVT-7100? or is better buy the YUPITERU MVT-7300?
The YUPITERU MVT-7100 doesn't have the 8.33 step for the aerial band.

Thanks, Danish

I recently went thru the process of obtaining the best value-for-money
versus performance handscanner and settled on the Yupi7100.
The 7200 would be better if you could obtain one - it allows the backlight
to be left permanently on and has a ferrite rod for broadcast AM reception -
a feature I would like. Other posts say there are reception benefits also.
It seems the whole scanner world is in a state of change with the roll-out
of digital systems, so I figured it was better to make a relatively small
investment in the Yupi 7100 now and, when the future becomes clearer, to
spend significant money on a modern unit.
Scanners generally seem to take some time to "learn to drive" so, like
automobiles, I think it's better to practice on something cheap and
reliable.
I'm very pleased with my 3 week old 7100 and I know I've got a lot more to
learn before I consider spending megaeuros on another scanner.
We don't have widespread trunked systems in Ireland - if u have in ur
country, disregard most of the foregoing!

sorry. ADSL modem puked. Was without internet for 2 weeks. damn provider would not replace the modem. took talking to the supervisor to get a replacement.

Anyways. I will post another invert program in alt binaries soon. that security coding. what is funny. if you have a modified 6 meter or a cordless phone that will tx on a specific channel. If you record a persons databurst that you hear on a scanner back on that cordless frequency of that phone. it will think you are the base. You could actually make a persons phone ring. If you record the ringing databurst from your scanner. But the phone cannot be sitting on the base. That is one proof that these security codes are not at all digital.

well it takes common sence. Never ever ever mention cell band. just say yes. or say 29 - 956 or something. if someone has a ? they will email you. Posting models like this in a NG or other places will almost always get a ebay kill. Just say like 1994 or something. since it is not illegal in canada. We do not have to say pre ban. since htere is no ban on cells here yet. all our radio's are unblocked except for uniden made ones. radioshack etc.

get wintone. www.steaksandwich..com

If you read their faq's they sorta suck. I found a easy way to get rid of that error when the program loads. some machines will get this error. It has to do with sound. Anyways. I used to use a dial up modem years ago. and had to recently. the error comes when there is more then one audio device. ex. 2 soundcards. 1 soundcard and 1 voice modem. If you make sure you have only 1 audio device. You will not get this error. or just do like their FAQ tells you. but disabling the voice options in multimedia for a voice modem will fix it. or 2 soundcards and such.

Wow... ebay sure can cost you... I'm sure you don't want to hear this, but I bought mine for around $15 back in 1994 from a ham in NC. It cost nearly as much to ship it, since it wieghs 8 lbs.

A modification I did to it was to take off the odd military connector and put a barrel connector on the end of the big coax inside the mast. You'll need to file down the center conductor of the coax a bit in order to fit the barrel connector on, then just solder the shield braid to the outside of it. A short piece of PVC pipe around the coax helps fill the gap and keeps the coax from flexing too much.

Ah, I don't think that constitutes a "proof" of anything. Other than
that the phone will respond to the correct security code, be it digital,
analog, or whatever.

Many phones/bases change the security code after each call to prevent
the type of thing you are talking about from being used to circuvent the
security. This type of security is designed only to prevent you from
using your handset and someone else's line to make calls. It is not
designed to prevent monitoring of the conversation(s).

In the NFM mode the Yup7100 will step in 1 kHz increments, so you can get to
8.33kHz channels, 0.33 kHz off channel is negligible.
Regards.

OK, I admit it - this is really before my time.

I've been in radio since the 70's but my memory is failing me.

I've "acquired" a BC-12 10 ch. crystal Bearcat with a few rocks. I rearranged the xtals by frequency and screwed everything up. I'm sure it has something to do with the colored "jumpers" for VHF Hi and UHF T, but I don't understand how they're supposed to be configured, as there are 10 "posts" (one by each xtal holder), yet only 2 wires......

Anyone remember how this works, or have the docs for a BC-12? Please rely off list!

THANKS and 73 from Michigan!

It is illegal to divulge on-going Law Enforcement activities. Someone might forward this to the Daytona Beach Police Dept, and then all hell would break loose.

The cable is just two wires and there are diagrams at www.pro-92.com. All the info is there including how to build a cable, where to buy one, and where to get the best software (Win93). The 2053 can be programmed from a PC but it cannot be PC controlled like some of the Uniden radios can.

a yagi is a beam. well. that is if you heard of a beam. you probably seen
these on houses of amateur radio users. a easy way to describe them would be
that they look like a ladder with a bar in the middle.
search online for .... yagi, Yagi Uda, Beam, and so on. someone should have
a design somewhere.

Hi there,
I am looking at getting a Yaesu VR-120 scanner, can anyone give me any info on this scanner...good and the bad?..I realise it's small and isn't a trunk tracking radio but I am just looking for a secondary toy.I have the R-2 but saw the reasonable prices on these and thought it would make a good backup radio?
-Is it very sensitive?....
-does it have a built in charger?..
-Where is the best place to buy one?..
Thanks any info would help, please e-mail me directly at the below address-Thanks-Russ

At exactly noon time today, I will shut every radio in my house and observe a minute of silence in honor of Ted Williams.
As a child I watched the Splendid Splinter many times. I would sit in left field at Fenway Park and never take my eyes off of him for the entire game. I cried when I heard him criticized, and I thrilled at every homer. I despised the pitchers who walked him and a covered my eyes if he struck out. I could not bear to see him walk away from the plate toward the dugout.
That wonderful man achieved things that will probably never be equalled in baseball. And in two of his season, he only batted a total of 24 times, because of the amount of time he spent as an active duty Marine fighter pilot, serving in both World War Two and the Korean War. I have never heard him gripe about the lost at-bats and home runs that he would have added to his career statistics had he not sacrificed his batting records for his national duty.
God Bless the soul of this wonderful man.

I would (DID) splurge and spend the extra bucks for the VR-500.
You get a LOT more radio. But, like the R2, it isn't much of a scanner.
It's pretty slow compared to the R.S. and Unidens...

The US marines bought a bunch of ICOM commercial FRS
radios according to the ICOM web site
(http://www.icomamerica.com/). It's a PITA frame web
```

site. Click on "what's new". You have to scroll way
down to find the item, but it's there.

From the site:

June 1, 2000 - The U.S. Marine Corps has selected a
special, modified version of ICOM America's IC-4008A
FRS radio for use as their new intrasquad radio
(ISR). This new model will be known as the IC-4008M.

They don't say what the mods are. Stuffing crypto
in the little package would seem kind of difficult.

It's actually a two pin mini plug, not three. There is circuitry in the cable to convert between RS-232 and TTL levels. The cable for the 93 is the same as for the 92.

For software, go to

http://www.pro-92.com/software.htm

Look for Win93 at the bottom of the page.

For cables, follow the "PC Interface" link on the left.

If you build a cable, the most popular one is the "Simplified Two-Way Cable." If you want to buy one, Purple Computing's is the way to go.

If you comb the discussion board archives at www.pro-92.com, and at the pro-92 and pro-93 Yahoo! groups, you'll find info on cables from other devices work that work.

The modification may make them no longer truly COTS radios.

The trick is if they meet MILSPEC 810C/D compliance. In any event *I*
don't like even this (meaning that we've left the realm of legal and
within reg to my opinion). Its not *true* encryption and that's the
only thing that will keep troops safe.

George.....

Sat --- 1:10 pm
I just connected to your scanner and it sounds great here in Dover,
Delaware.

By the way, my wife is in love with you for broadcasting the race
tonight.

I have been reading the stuff on Live365 about broadcasting and I may
try to figure it out to do it here.

Thanks

Actually since the raceway is next to the airport a lot of the Drivers and Owners fly home each evening. During speedweeks (Daytona 500) its a constant stream of jets and planes out of here cause most of the drivers sleep at their homes and fly back for the next day.

Small world, up til 14 months ago I lived in Lancaster, PA and drove to Ocean City, MD every weekend. Loved the fishing down here. Drove through Dover nearly every Thursday evening and Sunday night. In fact when thinking of moving we had considered Dover since it was much closer to the Atlantic....

Make sure you get a European version, the US version is full of gaps because
of poor receiver design..

VR120 does not have ctcss, and you need to charge the batteries externally.
It is not a better scanner then the R2, it has 2 advantages: memory tags and
bank link. The build in 'counter' is very poor. So no real reason to swap
the R2 for a VR120..

Would like to trade Radio Shack Pro 2021 200 channel base scanner for hand held scanner - trunking - Pro 90, Pro 91, BC 235. Non trucking - Pro 51, 62, 64 or Pro 67. Or any othe hand held scanner.

The 2021 is in excellent conditon. Backlight is bright, scanner looks brand new. Includes antenna and mobile mounting bracket. The 2021 receives up to 512 kHz and is a great base scanner for someone who doesn't need 800 mHz coverage.

Thanks,

Dan Schopp

237. PCR1000 receive problems?

Newsgroup: rec.radio.scanner
Date: 2002-07-06 21:40:08 UTC
From: DP <damonp@ev1.net>
Message-ID: <hhoeiucacjc5o5i9eoe9j66p5hegnvpotf@4ax.com>
Source record: 46278

Need assistance with figuring out why my PCR1000 does not receive very well. I am comparing it to other scanners in use here such as a pro-93, pro-43, and pro-2004. I am using TalkPCR and the Icom program but signals sound a little noisy compared to the other scanners. Plugged in a MFJ external speaker but not much improvement except audio wise.

I have tried two antennas, one is a telescoping and the other a diamond RH77CA. Frequencies are 120's Aircraft , cell and 900 Mhz. I am using thr correct steps etc. Maybe the problem is program related (settings) or other. Not sure where to go next. The reciever is a Eurospec with serial 053xx.

Also, Is there a way to setup a limit search using TalkPCR or other program for the PCR-1000?

Thanks for any suggestions.
Damon

239. NASCAR Pepsi 400 - Live Crew/Driver Communications Online

Newsgroup: rec.radio.scanner
Date: 2002-07-06 22:06:26 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3D2769E2.6020109@licensed4fun.com>
Source record: 46280
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Today I will be broadcasting live Crew/Driver in-car communications from the Pepsi 400 at Daytona Beach. Since I live only 2 miles from the track I pickup the comms on my scanner so I'll put it LIVE on the internet for everyone to enjoy.

The Pepsi 400 race begins at 7:30 PM EDT however I'm already broadcasting live Comms from DAB International Airport.

I did this during the Daytona 500 and it worked out very well. It adds to the excitment when you're watching it live on TV and can hear the driver comms.

To hear the live audio goto http://www.MilAirComms.com

Before the race starts I'll be broadcasting other live Scanner audio, either from the Police/Fire comms or Daytona International Airport Tower/Approach freqs.

Happy Listening
George

I just purchased an ICOM IC-R3 a couple of weeks ago and I am generally happy with it overall... however, the unit does appear to be basically deaf in the Civilian and Govt. high band (150.8 to 174) where most of my local police action is... and it is pitifully slow in scan mode...

Does anyone have any recommendations for improving scanning performance?

Any antenna recommendations?

Does anyone have the serial control codes for this unit?
I am considering reverse engineerig the codes with a serial sniffer but if anyone has already accomplished this I would appreciate the pass on...

Otherwise a very cool little unit... the TFT rocks!!!

From: auction30 <auction30@msn.net>
Message-ID: <uifd3nbf5iqf70@corp.supernews.com>
Source record: 46294

The PCR-1000 is not known for superior performance below 30 MHz, but does a fair job. You should be getting good results especially in the 800 MHz band even with the stock antenna. If not and your scanners are blowing away the PCR-1000 in this area, then it has a problem.

PCR-1000s are fun to play with, especially with all of the third party software out there, but by far they don't take the place of good quality dedicated shortwave and scanner receivers and appropriate antennas. Remember the PCR-1000 is a wideband receiver. Unlike dedicated receivers widebands normally receive everything, but nothing particularly well...

Thanks to all who responded. Cable is on order. I basically want to backup the programming
I've done. I don't want to have to program over 100 frequencies, trunk ID's, text tags by
looking everything up. It takes too long ;)
If the software, and two way cable won't allow for controlling, at least I'll have a backup
database.
So far, it's a nice scanner. This one stays inside, my BC245XLT goes with me in the car.
(911 dispatcher) We are activating our TRS in August. Pitty the "scanner buffs" who don't
know about it and have to scratch their heads figuring out why they can't receive anything ;)

You can enter a trunk system freq just like any other and you scanner will pick up any traffic on that freq.

As far as *tracking* a trunk system, that's a differant story. A BC80XLT won't do that. Listening to a trunked system requires more than just being able to recieve 800 mhz signals. You need a radio that is capable of decoding the control channel and following the various talkgroups as they jump from freq to freq. Scanners capable of doing this usually proudly state this and cost much more than your scanner did. What you need is a BC245XLT.....

Good luck and 73's

Ken KG0WX

Hi Troy,

I got my AR8600 MKII 2 weeks ago and I'm stoked with it. It has excellent VHF performance and it's probably the best air band receiver I've owned. I'm picking up frequencies I've never heard before!.

It has very good HF performance as a bonus, so you can use it to monitor the Pacific in-bound aircraft frequencies as well.

Mike

You can call me a liar but when I clicked to hear the race coms it gave an audio commercial for sex toys and lubes along with grafics of a blow up sex doll. I mean if you think that is proper for children go right ahead and deny it. I'm sure others saw and heard the same thing.

BTW, I really liked the feed from the scanner but you can lay off the x rated stuff next time ;-)

Uniden made a few... Let me see... BC-350A, BC-700A, BCT-7 were the
older ones... They make a few DIn mountable trunking scanners too I
think.

I have a BC-350A if you are interested.

Thanks,

Andrew.

Well guys I have had a "hustler" discone up at 35 feet with the same coax since 1984 and it's connected to a BC9000 this time and it continues to work better than any newer antenna from RS or another company I can't remember the name. By the way this is a cheep hustler discone and I would buy another if I could. I use a hustler mor on my vehicle, the same one for the past 15 years. Hustler antennas just don't quit.

Good luck and happy scanning.

and did you know.on most scanners that do the 2 and 9/ power on reset thing. You can actually do more things with 2 and 9 with power on. The 2045 if you press the 2, 9 and power, plus another key. It will shut off the display lights. I went thru every single key and got some fun stuff or annoying things. but it has to be at least 2, 9, another key and power on. works on most rs and uniden models that do the 2/9 reset.

If you must know, the Uniden is on the way to KG6GIY, Sean Smith. My name is William DeWayne. Got a problem with that?
DeWayne

As an HF receiver, I'd give the 8600mk2 a 7.5 out of 10.

If you can live with 50Hz tuning resolution and the lack of filtering
options, then the 8600MkII will do the job. I have noticed overload problems
between 100 - 500Khz, but NAM seems to alleviate most of it. Stability is
exceptional due to the built in TCXO and the option for a 2.kHz and 6kHz
Collins filters makes it even more HF friendly.

I wouldn't say it is comparable to the R-75 for serious HF monitoring, but
considering everything else the 8600MkII is capable of, it is an excellent
all-round scanning receiver.

Mike

There is no handheld available (YET!) that will compare to a dedicated HF rig.....

I also own an R-75 and have owned many Handhelds that boast SSB capability ,including the 8200MKII and MVT-9000 and if your really after weak signals ,interference rejection ,filtering etc etc and are seriously into monitoring HF then stick with the R-75...however having said that if you want a great portable with good HF specs then by all means the 8200MKII is a good preformer ,VHF is awsome and UHF great to!! ,just dont expect to get the same HF performance out of it as a dedicated HF rig!!

Cheers.

A pity. Rather than maintain and upgrade a secondary backup, they dismantle and cash in on EBay.

Leaving the telephones as the ONLY means of reaching the PD or FD is a disaster waiting to happen. What are they going to do if a major failure occurs at the switching station? What will they do if some guy with a backhoe takes out a major fiber/copper cable? How fast can your baby Bell get a backup in place? How long do you want to be without 911 service?

Ah well. I shouldn't be surprised. All in the name of saving a buck or two. They tried that here too. They failed, but they tried.

The 8600MkII is connected to a discone via RG-213 coax.

293. Icom R2 Scanning Problem.

Newsgroup: rec.radio.scanner
Date: 2002-07-08 09:25:07 UTC
From: winduptoys@hotmail.com
Message-ID: <486615cf.0207080125.39054a8c@posting.google.com>
Source record: 46233

Hi! I'm a new owner to an Icom R2,and I need your help. Could someone please help me!! I've had it for about two weeks now,and the problem is this. Now that I've (programmed) all the (frequencies) into (channels) that I want to (scan/listen) to,after starting the scan,it will not recieve anything!! Since I have alot of the same frequencies in it,as I have in my base,I turn my other scanner on and compare it to it,and the base hears transmissions just fine,but the R2 NEVER hears anything at all. It never stops scanning!!...I'm sure I have the right frequencies,and I'm sure I have the right (mode/AM/FM/WFM) programmed along with the frequencies,but the R2 will not do anyhing. It has excellent sensitivity when I (dial) in the (frequencies) and listen to them manually,but it just won't do anything when it's scanning. I suspect it has something to do with those damn (tones) in the (squelch system),or something,for the life of me it makes no sense. The (display) scans and in the bottom right corner it has (CT). Forgive me for being so ignorant,but all these (squelch tones) and codes,or whatever they are is all new to me. As far as I can tell,it's a sweet little radio,for the frequency range it has,and it's sensitivity,but one hell of a complicated sum bitch to figure out how to operate!!!...Sorry,if the post is too long,it's my first time,an all. Thanks!

the 8600 is not a handheld
it's a base radio with similar controls to the 8200 handheld but a much
better RX design and more features

Source record: 46239
Cross-posted to: alt.radio.scanner,rec.radio.scanner

This is a Radio Shack PRO-2035/2042 scanner that has the European GRE chip in it so it has full coverage. This is a great scanner, arguably the best ever from a full functionality/performance standpoint. You can see much more about this model at:
http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailIndex.asp?URL=http://support.radioshack.com/support_electronics/28555.htm

Unit is in very nice condition and works fine. The case has some scratches, but nothing major. This unit has a stick antenna that plugs into the BNC connector in back, but not the original stick antenna that screws into the case (I don't know why).

You can see a picture of the unit at:
http://members.accesstoledo.com/jcfoust/scanner.jpg

Now, the reason I say it's a 2035/2042. I don't know this unit's history, but it seems to be a 2042 with perhaps a 2035's LCD display. The 2042s, as I understand it, had amber LCD lights, but this one is green. Also, the instruction manual that came with it says 2035. HOWEVER, the front plastic plate on the unit and the rear metal chassis say it's a 2042. Serial number is 005114, date code is 12A5. As I understand it, the difference as to whether it's actually a 2035 or a 2042 is pretty inconsequential-the only differences were in the firmware, which is contained in the processor chip-and since this one has a European 2042 chip it is a de facto 2042 anyway. I'm just giving you full disclosure here.

Price: $350 plus shipping. Please contact me at jfoust@bgnet.bgsu.edu if you 're interested. Thanks!

NOTE: It is illegal to monitor cellular frequencies in the United States. I do not use this unit to receive cellular frequencies and do not condone its use to do so illegally.

300. Oregon - Should I replace my BC780XLT for Digital Capable?

Newsgroup: rec.radio.scanner

Hello,
Just a question. I listen to trunked frequencies for Washington, Clackamas, and other local Oregon counties. Should I plan to replace my BC780XLT in November when Uniden comes out with their digital capable versions of scanners? Or will I have a few years to wait before Oregon counties have digital APCO25 equipment in place? And will this most likely be encrypted or not?

Thanks,
Scott

I ordered a Yaesu vr-500 wich arrived today from Germany.
And as I supposed it, the manual is in german...and I don't speak a word of german :(
So I would like to know if I could find on the web the user guide (in english) for that scanner,
or in french as it could help me starting with it because I don't even know how to memorize
frequencies or how to give a name to a frequency!

Or maybe one of you would be kind enough to explain me the basics of that scanner...it would
be great :-)

Thanks a lot for your help,

Bruno

Join the Yahoo VR500 group. There you will find a files section and it
has some guides you can print out.

One of the things I've noticed about my new scanner is that it regularly reports loose cows in the mornings, right around sun-up. It never seems to report them at any other time of day.

I don't have a farming background, but I don't think this is simply a coincidence. It's too consistent.

Does anybody know the reason for that? Do cows try to break out during the night or something?

TIA

Harry

Don;t have a real farming gackground either but a wild guess could be that some farmers will have a break in the fence . There will be a ditch there and over the ditch is some boards that are spaced severl inches apart. This lets the farmer drive his truck over the ditch but a cow will not cross it. Maybe they can not see the gaps in the boards at night and are not afraid of the gaps.

Many of the IR2 functions are not intuitive.
Probably because it doesn't have a keypad.
The problem is even worse if you are on vacation,
and didn't bring the confusing manual with you.
But it is a great little radio.

My brother gave me his ICOM R-7000 after the display started acting up. Not sure of the problem, but a few call to Icom and several other repair places gave me approximately $150 to fix.

If you are interrested in this type of radio (25 MHz - 2000 MHz) send me a note and we will discuss the issues.

How exactly do you find this group, and once found, how do you join. I've tried to join groups like this in the past and could never get into them.

Bruno, email me and I can xerox the manual and give you a copy. I'm still learning this radio myself. Got to get it repaired though. I broke the earphone/programming jack. Also there is a thread somewhere about some freeware (I think) for programming this little gem. One more point. Get that extendable Rat Shack antenna. Works well on shortwave. I also have a very good Diamond brand antenna I use for the VHF/UHF as well. I'll look that up later. Hope this is of some help. Eric

I have read that the video option is relatively deaf, you need to be very close to the transmitter - then again that might be limited by the stock antenna ?

If the agencies that you monitor are not digital, then you don't need a new
scanner. If they switch to digital in the future, then that's another
matter.

There are 3 specific Yahoo groups for the VR-500, named:

VR-500, YaesuVR-500, and yaesuvr500club

The first group (VR-500) is the most active, though I belong
to all three groups.

To subscribe to the Yahoo groups devoted to the Yaesu VR-500,
go to this web page:

http://groups.yahoo.com/search?query=VR-500&submit=Search

For each link, click on the group name and you will be given the
opportunity on the next page to join the group. If you have not registered
previously with Yahoo, they will ask you a set of
(nosey) questions.

If you want to subscribe to the email lists without
registering with Yahoo or the
benefit of the web interface, you can subscribe
to a group by sending email. For example, send
email to VR-500-subscribe@yahoogroups.com to subscribe
to the "VR-500" group.

The web interface affords you the ability to download
files and see photos provided by group members, but
Yahoo makes you view occasional advertisements.

You can read about and download my open source tk500 software
from http://parnass.com

I don't warrant the software, but it won't cost you anything.

NOAA Weather Radio Frequencies

WX1 -- 162.550
WX2 -- 162.400
WX3 -- 162.475
WX4 -- 162.425
WX5 -- 162.450

WX6 -- 162.500
WX7 -- 162.525

Frequencies are in MHz. Modulation is 16KF3E or 16KG3E.

Note that the letter "A" indicates simplex use of an international duplex channel, and that operations are different than international operations on that channel. Some VHF transceivers are equipped with an "International - U.S." switch for that purpose. "A" channels are generally only used in the United States, and use is normally not recognized or allowed outside the U.S.

Boaters should normally use channels listed as Non-Commercial. Channel 16 is used for calling other stations or for distress alerting. Channel 13 should be used to contact a ship when there is danger of collision. All ships of length 20m or greater are required to guard VHF channel 13, in addition to VHF channel 16, when operating within U.S. territorial waters. Users may be fined by the FCC for improper use of these channels.

Yeah,..I've had my Icom R2 for about two weeks now,and it was
definately confusing to learn how to operate at first,especially going
by the book,but now that I've got it (programmed) and (scanning),I
know that (I love the little bugga)!!...But (I knew I loved it the
first five minutes of play after I opened it),when I (dialed in) a
(local UHF TV audio frequency),that's when I knew I had made the right
purchase. I thought,this is cool!! Now I can listen to UHF and VHF TV
audio when the power is off,or when I'm on the go!!...It's
sensitivity,excellent audio quality,and extensive frequency
coverage,make it a real winner to me!!...This is my first (wide band)
scanner/radio,and I can honestly say that,I'm very happy with my R2!!
...Later!

>Hate to show my stupidity, but how would I build a yagi, not familiar
>with those type of antenna.

This is not a stupid question at all. A Yagi antenna is short for a
Yagi-Uda array.

I suggest looking up this antenna in the ARRL Antenna Handbook,
available from the American Radio Relay League. They have several
construction projects in there.

I recommend building your own antenna for one major reason: Because
most folks selling such things don't customize their antennas for this
band. You could purchase a log-periodic antenna, but it wouldn't have
as much gain or directivity, so you'd need a larger one to pick up the
signals you're seeking.

You could purchase a VHF TV antenna, orient it vertically and try
that. It won't be as good as a yagi antenna of the same size, but you
wouldn't have to build it either...

I frequently hear the OSP Post 8 referring to a "21-D".. Does anyone knwo what this offense code means?

Thanks!

Look at the hex for the 162.230 channel. Then look at the hex
for the other channels. Use the Calculator that comes with the
Windows operating system to subtract the control channel hex from
the unknown channels hex values. Use the calculator to convert the
answer from hex to decimal. Multiply by either 0.0125 or 0.025
and finally add to your 162.230 frequency to get the unknown
frequencies. But I don't think you have the correct frequency
for the control channel? Maybe it should be 162.225 or 162.2375

Ubbe.

READ THE MANUAL!!

If the system is in the 800 or 900 MHz region, Trunker can figure out
the frequencies. Otherwise, you have to figure out which hex code
corresponds to which frequency.

I have a ICOM IC-R8500 scanner and accessories package for sale.
This includes:

-- the receiver itself
-- original service manuals and schematic
-- original box and packaging
-- carrying handle (MB-23)
-- US 120V power supply
-- a Javiation Sky Scan desktop antenna
-- a Radio Shack longwire shortwave antenna with adapter
for the receiver
-- a N to BNC adapter for >50 MHz reception

The price for this package is $1000 including free ground shipping
and insurance within the continental US.

For details, including pictures of the scanner in operation and
detailed views of the unit and its connections, check out the Web
page at:

http://www.xring.com/forsale/icr8500.html

Do you find that if you connect a large ant (say, as in my case, a
'Windom') it overloads the
receiver to point of being unusable on the HF bands..?

Second question, do you find that the 'Bar MW Antenna is totally useless (
in my case it is and
the telescopic ant is not much better to be honest (maybe I am expecting
too much from this
radio)....any comments Mike.

Thanks for your posts and time (I have just acquired my "AOR-8600" this
weekend gone).

Cheers to all in the group, Ken, G4KIR.

Deleting Frequencies from ALL Channels Within a Bank

1. Press AUTO. AUTO appears.

2. Repeatedly press AUTO to select the
channel-storage bank that has the frequencies you want to delete.

3. Hold down ENTER, then press CLEAR.

Source record: 46079

I had a real hard time programing the R-2 and had to read the manual
about ten (10) times. HOWEVER once the free cable and soft ware came
the programming is a snap and its great to be able to have different files
of frequencies backed up on the computer. I have not tried the ICOM down load
service and will stay with programming the banks locally.
The CTCCS feature is great, the RELM HS 200 will do both CTCCS and
Digital Tone Coded Squelch BUT the HS 200 dose not SEARCH for
tones you have to know them or... try them all until the correct one opens
squelch! I us the R-2 to search for CTCCS tones BEFORE manually doing
a hunt and seek on the digital tone codes with the HS 200.
Radio Shack selsl a FRS holster that fits the R-2.
Also a BNC to SMA adapter will allow a lot more antenna choices
and this helps reception!
Jim

> weekend gone).

Hi Ken,

I haven't connected the 8600MkII to a long wire antenna yet, so I don't know how bad HF reception is affected by overloading. I do know that with a discone, the 100 - 500KHz band is affected.

The MW antenna works "adequately" on my unit. I am in suburban Sydney Australia, so I receive all the local AM stations at around 50% signal strength with the MW bar antenna on its own.

You say you just acquired the "AOR-8600", is this the Mark 2 model? The 8600Mark 2 addressed some of the HF overload problems with a better RF front end design. FYI - http://www.aoruk.com/ar8600.htm

Cheers
Mike

400. AOR8600 SSB operation

Newsgroup: rec.radio.scanner
Date: 2002-07-11 05:33:27 UTC
From: Michel Bernard <bernardmic@sympatico.ca>
Message-ID: <oM8X8.2563$c_2.1333926@news20.bellglobal.com>
Source record: 46090

I am aware that AOR sells Collins mechanical filters for their 8600 scanner but my real complain with the actual filters are not that they are too wide, it is the fact that the 8600 BFO injection frequencies seems all wrong. Whether using USB or LSB or CW, the sound seems way too high pitched. Giving the impression they are incorrect or not correctly injected at the optimum bandpass point.

Anyone have a clue on how to tweak BFO injection frequencies in the 8600 ? Or else anyone knows if a technical manual is available for the 8600 ?

Oh by the way, I own various HF comm receivers and I am well aware the 8600 is not an HF receiver. Please do not tell me.

ahh. but one things isn't 100 % accurate.

>One more thing, as far as I know it is perfectly legal to own a scanner in >Canada and the cellular service is not blocked. Most receivers available here >though are built for the American market so although it is legal to listen to >cellphones, very few receivers are capable. I feel I have to say that I am not >that interested in listening to cellphones. Even when mobile phones were on >152 MHz I couldn't be bothered listening to them.

only Uniden mande and radio shack scanners are most currently blocked. 99% of the other brands. from alinco to kenwood. are still unblocked. only some HT's and mobiles are blocked. But that is ham equip.not scanners. Even our R3's are unblocked.

Very boring though.

I personally liked it. but if you use a external antenna in your house or vehicle. You will get bad RFI and images. Especially VHF paging. but I liked it.

I bought this little radio recently just to get mobile,
got an icom pcr-1000 and an icom R-8500 at home so I didn't expect too
much from it, not with the R-2 being so cheap I mean.
But it actually turned out to be a nice little radio, at first I didn't like that
it lacked a keypad but I've learned to live with it now :)
The stock antenna isn't that good tho - a telescopic whip would be
much better, as it turned out I adapted the pcr-1000 telescope antenna
to the r2 and it works fine , much better UHF reception...
I also live 500m from a paging transmitter and cant say I have much more
interference than I got on the other radios.
All in all - for that price it's a good handheld.

410. New NOAA WX Broadcasts Sound Like Humans

Newsgroup: rec.radio.scanner
Date: 2002-07-11 09:40:55 UTC

Weather Turns Mellow As Radio Voices Recast
New Software Delivers More Human Tone

By Michael E. Ruane
Washington Post Staff Writer
Thursday, July 11, 2002; Page B01

Nobody liked Igor, who was also known as Sven.

He sounded slightly Teutonic, slurred his sing-song speech and felt like someone you might want your kids to avoid.

If he sounded inhuman, he couldn't help it. He was. And it cost him.

As of yesterday, Igor/Sven, as he was nicknamed by many local listeners of the National Oceanic and Atmospheric Administration weather radio system, is out of a job.

The unloved computer voice that has weirdly recited forecasts and warnings over NOAA weather radio in our area for the last four years -- he could never properly pronounce the word Dulles -- has been canned.

His replacements are Craig and Donna, who sound like soft-rock deejays and are at least semi-human: Their speech is made up of human voice fragments called phonemes, reassembled by a computer.

Locally, they debuted yesterday morning from the National Weather Service's Baltimore-Washington office, after senior forecaster Chris Strong gave them final lessons in proper local pronunciations: stuff like Puh-TOW-mick, An-AH-pole-is, FAW-keer and NAW-fuk were potentially difficult, officials said.

Earlier, Donna had a slight problem with the word degrees, as in 90 degrees. It came out "degrease." But she'll learn and be popular, especially among mariners, the Weather Service said.

The automated voices are the latest effort by NOAA's National Weather Service to get weather information to the public as quickly as possible. The Weather Service has been broadcasting weather via special weather radio since the 1950s.

You need a receiver that picks up the service to listen. Many marine radios pick up the broadcasts, and inexpensive weather radios are becoming increasingly popular, the Weather Service said.

Originally, the broadcasts were done with tape-recorded human voices, said Joann Swanson, the Weather Service expert who headed the new voice project. And forecasters could always go live in an emergency.

"In the old days, you had a human being who would rip and read off the Teletypes," she said. But that could be tedious, time-consuming and labor-intensive.

About four years ago, during a period of broad technological improvement, the service concluded that automating weather radio would produce faster and labor-saving reports.

In early 1998, the agency turned to technology that could render the broadcasts via a computer that read text and then spoke in an imitated human voice.

It was fast and modern, and it bombed.

"A lot of people felt that this was a dehumanization," Swanson said.

The reports came in a computerized voice officially nicknamed "Perfect Paul." To many listeners, he quickly became Igor, Sven or Arnold. People complained that the voice had a foreign accent.

Gradually, technology emerged in which an actual human voice was recorded and then disassembled by computer software into the 40 or so phonemes, or subsyllables, that make up human speech, Swanson said.

The software was able to read text and reassemble the phonemes into the corresponding human speech. The Weather Service studied companies that made such products, polled listeners via the Internet and assembled focus groups to judge the candidates.

The Weather Service selected a product called Speechify, made by Boston-based SpeechWorks International Inc.

Speechify produced the voices that the Weather Service nicknamed Craig and Donna, after two Weather Service employees involved in the project.

Yesterday, the Sterling office was broadcasting with both voices. Craig and Donna sounded tentative, with a slight tremor.

That seemed inevitable: They were new, and Jim Travers, the meteorologist in charge of the office, said further pronunciation adjustments were probably inevitable. But they had done well.

"I listened to it . . . and I was just enthralled," he said. "It's a huge improvement."

I have this software and it works very well, but I don't think it
works without a Winradio receiver. After installing, it appears as a
"plug-in" in the menu of the main Winradio receiver software.

I have had a R2 for several years now and love it.
Good performance, Light and small enough to carry, cheap enough not to cry if it gets lost.
Good battery life and uses cheap, easily available batteries that you can get anywhere.
I use a Diamond discone and a mobile antenna and have not had any problems with RFI and images. I find the audio quality excellent especially considering the size. In my opinion a really good little radio. The only issues programming (SW and cable make it much nicer) and I wish it had SSB.
Mine gets used an average of 4 hour a day and has been used like this since I purchased it. I made the mistake of lending it to my girlfriend and after a few months of being made to feel guilty when I asked for it back got her one. Now I even get "shhhh" ed when talking ! It's great not to have to talk all the time :)

So, as you can see I like it.

Over here (AU) they want to charge $70 AU for the cable! (That's about
$35US)
I kid you not. Worse still is the fact that I cannot find a local supplier
of the chips to make one !
I have the schematics but no chip.

I just got a BC-235.
What are the maximum number of freqs that can be entered into a
trunking bank?

Does the first priority freq have to be a special freq in the system
or is the order not important?

What is the significance of the little bars as it scans (trunks)?

I'm in the Portland/Vancouver area and the freq book I have
shows freqs for slightly different areas that are almost the same.
Should I enter every freq into one bank and pray?

What is there a minimum size to a trunk bank?

Does anyone have a known complete list to trunk the whole
Portland/Vancouver area?

it receives, AM, FM, and WFM.

canadian version is unblocked from .5 to 1300 Mhz with no gaps.
Us. cell blocked.

Maybe that is why I had more RF. I owned the Canadian Model and lived in Canada. People I have talked to said they get cell images in 500 Mhz. I never ever got any images there. I tried hard to get them there. no luck for me. When I talk about paging. These Paging frequencies are in 149.77 and 141.36. That is what I had splattered in my car on our police freq 139.59. in my old town. it was spattered with autotel that was in the 152 Mhz range knocking out my police frequency there of 139.56. I still say. I loved that little radio. With Duracel batteries. I got between a week to a month of solid use. With power save. It receives very well. Some places better then others. if you can get the radio for cheap. Buy it. If you wnat to listen to the 800 Mhz band. there is no mod for the US model. Except for cloning it with canadian firmware. Good luck. Enjoy this great radio.

if you make the 2 transistor one. it works great. the MAX 232 one is more of a pain to get working. Your Comport has to give sufficent voltage for it to work.
If you need a Max 232 IC. I have a few dirt cheap. brand new. never used. I tried em all and I would reccomend the transistor one if you want fast and easy. Works great too.

> trunking bank?

From data at www.trunkedradio.net, most systems in your area are Motorola.
Each system can have a maximum of 28 frequencies. If you find lists
containing more than that, there is more than one system contained in the
list.

> Does the first priority freq have to be a special freq in the system
> or is the order not important?

For Motorola the order is not important.

> What is the significance of the little bars as it scans (trunks)?

Indicates activity on a frequency.

> I'm in the Portland/Vancouver area and the freq book I have
> shows freqs for slightly different areas that are almost the same.
> Should I enter every freq into one bank and pray?

No, each system should be in its own bank.

> What is there a minimum size to a trunk bank?

Systems can have as few as two or three frequencies or as many as twenty
eight.

> Does anyone have a known complete list to trunk the whole
> Portland/Vancouver area?

Try the URL posted above. Use a search engine to find other sites.

Anyone know what could be causing my bc760xlt to have very muffled sound on all channels. Sounds like the speaker is busted. I am going to open her up and see if anything obvious is going on. I do not have a manual, is there any kind of reset for the unit?

Thanks for any help, please respond by email as I don't check the newsgroup that often.

I'm getting the FREE (cable) and (software),too. I got my R2 from
(Universal Radio),two weeks ago,when they were running the FREE offer.
It may be until the END of this month,(July) until it actually
arrives,though. The (cable) and (software) were FREE,INCLUDED with the
purchase of a new R2. This ENDED on (6-28-02). But for those of you
looking to (purchase) the (cable) and (software) you can get it at
(www.Universal-Radio.Com) online. It's about $40.00,I think. Later!

I just read on a site something I never thought of,
I was going to build the ci-v interface but the Icom R8500 (and R75 and perhaps
other computercontrolled radio) already got a CI-V in/out interface + rs232,
which works perfect for this, just plug the r2 into the r8500.
I'm dismantling the 19" rack to try this as I speak, I hope it works...

But Airband uses AM, doesn't it?

BUT, when is this supposed change to 8.33 taking place? No news yet.

Yep, I got it from Emtronics & I paid $1,645. It didn't come with a power
supply which wasn't a worry for me, I have heaps lying around.

I don't think he keeps them in stock, so you might have to order one & wait
a few weeks.

Good luck

I just tried this with Goran Vlaski's IC-R2 programming utility v1.01,
http://www.digital-laboratory.de/ICR2V101.ZIP
It worked like a charm :)

Ash wrote:

AM is no problem for a 7100 or any other modern scanner.
They are using 8.33 spacing in Europe now, if you hear a plane transferring
to Brest ATC (for example), the frequency is given as a "Channel" to 3 dec
places which means it is an 8.33 spacing channel.
With the 7100, you simply use the 1KHz steps to tune to the channel & wite
it to a memory.
Regards. Mike.

It makes sense at the moment. I've put in a request, however it has yet to be added to the group line-up on SuperNews... Until it gets a little more coverage on different servers, why not? I would have never seen it otherwise...

Sensitivity, selectivity and dynamic range. (Not mentioning that it goes to 1600 MHz while PCR only goes to 1300 MHz.) In terms of software, there is nothing to compare - Winradio has a bonanza of great software and a lot of it for free, plus excellent developer support, plus Mac and Linux support, while Icom is relying mainly on third parties as their own software sucks.

457. Fm Radio reception Problem In Auto

Newsgroup: rec.radio.scanner
Date: 2002-07-12 23:23:01 UTC
From: nvavro@ptd.net
Message-ID: <3d2f65ef.8746041@news.ptd.net>
Source record: 46046

First forgive me for being off topic but I have no where else to turn. My New Toyota has a fm radio reception problem. In my old traded in '98 Rav the antenna was coming from the driver's side roofline in a metallic style. This '02 new one has a black coated wire wound 31 inch antenna mounted on right side wheel well fender. Reception is marginal to poor on all stations across the band. I checked various answer groups and they said changing receivers, antenna stems and fm auto boosters have provided little. They think there is a problem in the unshileded cheaply made coax that has seemed to change with this model year. Since cassette and cd is provided I presume most people would not complain but I have and no one has answered. The dealer suggested a booster but like I said other than me testing it out myself the word is it provides little help.
Can anybody offer a solution. Is there a booster rod to fit on same mounting thread size for a '02 Rav to help and if so where. Is there a better made antenna in whole that mounts the same with better cabling since the radios for both years were manufactured with the Toyota name on them. Nick

I am looking to buy a soft leather case for the Pro-43 scanner. They were previously available from Radio Shack, and also fit the Pro-64 pretty well. I believe they are no longer available from Radio Shack, but in the past, there were folks who still had some stock in these or sources of where to get one.

Any help via e-mail is appreciated.

Dan

During the night when the UFO's arrive to begin their nightly cow dissections, they sometimes land on the fences, break them, and thus, the cows then have a way out. Either that or its a new species of cow with night vision and retractable wings cleverly hidden by a system of white and black splotches of color on their backs that draw the eyes away from.....naw, its gotta be them UFO's.

These are things I think about when I am home alone and the TV is broke.

ya eh?
Search on yahoo or google or something. If you like most people would spend 10 minutes of their time. they would find what they are looking for. I don't see why people should get them from 1 second of posting. Most people had to search for what they wanted.
Since you said it was urgent. sounds suspicious. so I refuse to disclose what they are. hehe. even though I am canadian and live in BC. I don't trust anyone. well. except a few americans, couple of canadians and that is about it. I liked what sharx said, so I decided on saying something along that lines. yay. Airshow. They don't say much. They talk in their slang. in english. turn right. left. Oh shit. I hit him. May day, May Day. naa. very boring though. just like cell phones.

have a great day today.

Radio Shack stopped using the 'Realistic' trademark years ago. Even my old PRO-90 is marked Radio Shack rather than Realistic. About half of Radio Shack's scanner product line is made by Uniden and it has been that way for many years. The PRO-90 is a Uniden radio, virtually identical to the BC-235. You may be surprised to learn that some of the Radio Shack scanners you own are in fact manufactured by Uniden. If it's made in the Philippines, it is Uniden. GRE manufactures in Japan and China.

Hey,
I have this pcr-1000 I want to disable the AGC on,
using TalkPCR in 'spectrum analayzer' mode the AGC is off, but in normal mode
you can only select fast or slow.
Is there any software that can do it in normal mode?
Or do you know of any hardware fix to do it? alt. does anyone have
the schematic for it - perhaps I can find it myself.
Thanks

485. Need help - Scanner Software for Pro-93: I sthere an update?

Newsgroup: rec.radio.scanner
Date: 2002-07-13 14:57:54 UTC
From: JRS <sifontes@cwnet.com>
Message-ID: <3d303ec9_2@news3.cwnet.com>
Source record: 46125

To: rec.radio.scanner
cc: Radio Shack Customer Care - via fax

I bought a Pro-93 and the ratshack's scanner control software and cable bundle. The software as packaged does not include the Pro-93 in the setup pull-down menu, so I called the shack's customer care center. I was not logged on to the net at the time I was talking to the customer care lady, but she assertively described to me how to get to the "software updates" section of the shack's web page, and how, once I got there I should look for item 20-0048 (the scanner programming kit I had bought). It sounded as if she double checked that it was there while we were on the phone (I was impressed - prematurely it turns out - atthat time with the service). Well... when I did log on there was no software update for that SKU. Is anyone aware of any software updates for this software? I called customer care again but I got trapped in the 'customer support center from hell ' syndrome - the call center would try to transfer me to the person that helped earlier, who invariably would be busy and I would be thrown to voicemail. Any help welcome.

Sorry, but the RS 20-0048 package definitely does NOT work with the
PRO-93. RS offers no software/cable which will work with the '93.
Return it and demand a refund! It was sold to you in error.

Check out the "Software" section at www.pro-92.com for the excellent
freeware program WIN93. There is also information there on how to buy
or build a cable.

You may also want to check the PRO-93 group at www.groups.yahoo.com

I agree with Troy's information.

Mika at Bandercom was most helpful to me with technical answers to my questions plus advice on the MVT9000 M3.5 I bought from them a while back.

But then again, so is Jonathan of Javiation, from messages I've read posted by him. So it probably comes down to price and shipping costs, depending on where you're located.

Good luck...

Bill Becker

I have a 895XLT w/software, but I'm trying to change modes, and the manual doesn't tell you how to do it.
As with most scanners, it uses a default mode in each band, but I can't find a way to change it.
I also have a 9000XLT and its very simple to change modes, regardless of band.
Does anyone have any idea's or answers?
thnx in a advance

Actually the owners manual states the charging circuit is designed for both Nicd and NiMh using the yellow pack. The only difference between the yellow and the black is the fact that the yellow has a third contact on it to get the power from the wall wart. I'd be surprised if the 93 actually has a built in charging circuit that is proper for nimh. The manual does claim it however.
I've also seen many of radio shacks wall warts that the catalog claims to be regulated are in fact not regulated.
Typical for them however.

Ralph

i have a pro 2006 got it used the receive seems flakey on it. It has never been messed with besides the cell mod and diode speed up mod on it. I took the power supply out because shevia the heat destroyer liked to get my little gem warm. very shitty receive between 100 and 200 mhz..

Dear All,

I'm looking for the belgian radio frequencies (police, fireman, aviation
etc..)
and also some radio-amateur frequencies.

Can you help me? Or do you know where could I find such frequencies??

Thanks a lot,

Bruno

Sorry I don't broadcast 24 hours a day.... Only with there's an
interesting event in our area. When you live in "Lightning Alley" you
don't normally boardcast 24/7......

Message-ID: <3D318B9C.E67D59E9@optonline.net>
Source record: 45972

Wrong, wrong, wrong!

The black pac can be used with any type of battery; Alkaline, NiCd, or NiMH. BUT, batteries cannot be recharged in the scanner if the black pac is being used.

The yellow pac is intended to be used with rechargeable batteries, either NiCd or NiMH. The yellow pac should NOT be used with alkaline batteries because they can overheat and explode if the scanner is plugged in to the wall wart and tries to recharge the batteries.

Both the black and yellow pacs come with new scanners. I would assume a new yellow pac can be ordered as a replacement part. Go to the RS web site, look up the PRO-93 manuals/literature, and you should find a parts list. Get the part number and order it. Or, try phoning RS and see if they can find the part for you.

NiCD and NiMH batteries can always be recharged externally and used with the black pac.

Walt

538. CI-V, OPC-478, and IC-R10

Newsgroup: rec.radio.scanner
Date: 2002-07-14 16:25:51 UTC
From: jecottrell@sprynet.com
Message-ID: <178dc3a6.0207140825.7a28aae7@posting.google.com>
Source record: 45977

Any info would be greatly appreciated...

ULTIMATE GOAL:

Remote(battery operated), micro(self explan.), Scanner with
recording/date/time/freq logging.

INITIAL CONCEPT:
IC-R10 interconnected via CI-V with MCU and digital audio recorder.

PROBLEMS(!@#$%^!!!!):
Poor documentation from ICOM on CI-V and capabilities of IC-R10. I
just purchased IC-R10 and OPC-478 and I am not impressed with the
manual and general support of the CI-V protocol. I have found limited
info on the net but nothing of the sort to begin writing software,
etc. (Note to self - When I develop a nifty idea keep it secret so no
one will use it.)

Limited software that uses CI-V and communicates with IC-R10 (maybe
caused by the above problem?)

I can't get the OPC-478 to communicate with the IC-R10 with CI-V Test
by www.plicht.de. Question: Is OPC-478 only for downloading to radio?
(i.e. is it only capable of reducing rs-232 to ttl, or will it work
both directions?)

Any thoughts, suggestions, or ideas would be greatly appreciated.

John Cottrell

As far as I know, the modes are fixed in this scanner. You can changed the stepping, but I believe that is all...

Yeah, it's a big mess. It would certainly be nice if they would either rewrite it properly, or dump it all together. It is so vague that it's just ridiculous. They interpret and manipulate that law any way they see fit so that they can get another "conviction", and some more money out the citizens...

Why can't you "Assholes" get off this subject...maybe try to grow up a
little?
Same thing for years !! Maybe you guys should find something better to
do with your time instead of finding ways to annoy people on the list.

Ask yourself " Do I really think my opinion matters to anyone?"
probably not.
"Maybe I should grow up" probably not.

Do you guys even know anything about scanners? Probably Not.

Why don't you let "Cheek" rest in peace.

DearAll,

I just bought a new Yaesu vr-500 (my very first scanner!) and I'm really happy with it so far.
But I'd just like to know what are the LSB, USB and CW modes? What's the difference between
a scanner with and without such features? What do they provide?

Also, what frequency is used for cordless phone?

Thanks a lot,

Bruno

549. Help with BC245xlt antenna problem

Source record: 45989

Hello all. My BC245XLT is always hooked up to a roof antenna. I have some nice coax hooked up to it's BNC jack. The weight of the coax has obviously done some damage to the BNC jack, and I need to replace it. Is this possible by myself? I am handy with soldering, but remember hearing a lot about this unit that the board is epoxy covered. Any help appreciated!

Please email me directly!

Thanks

A friend of mine's family bought him a scanner -- a portable Bearcat, forgot the model number. We live in Joliet, IL (60435) and we'd like to pick up police and EMS broadcasts. Fire, too, maybe.

I've done a whole slew of searching, and I've found pages & pages of frequencies for this area, but nothing in these categories.

First, is there a decent, terse FAQ for new scanner owners? I could feed & follow search engines until hell freezes over and not find the right information!

Next, is there a quick answer to the question: How do we go about picking up fire, EMS & police in our area?

Thanks.

RB

The epoxy is only applied to limited areas of the board and it will not prevent you from replacing the connector. There are many variations on the basic BNC jack and you will need to order one from Uniden to be sure it fits properly. Before ordering, pop the cover off the radio and look to see if the job is one you can handle.

Source record: 45995

Rat Shack sells "Police Call" which has frequencies listed by state and
usage.
It is also available online on CD.

Try these

Fire 154.265
154.295
154,355
154.400

My 2001 issue shows that Joliet Police may be trunked, an fire will be
trunked in the future.
Trunking is an issue that I am not familar with since my scanner isn't
capable.
Others may be of help here.

It may also be necessary to look things up my county, or major metro area
that
surrounds your area.

Hope this helps

Tom

jerry,

read the post before you decide to respond with
your drivel. watch who you call an asshole, you piece
of shit.

are you too stupid that you can't read the subject matter?
nothing in the "subject" refers to anything about scanning.
it's obvious that you are the newbie here, other wise when
you came to the SUBJECT RE:JOHN MACKEY , you'd know it
had nothing to do with scanning and wouldn't have read it ...
never mind respond. but than again ... maybe your another of
Toilet Boys faggot friends.

Yes...without the Winradio attached and turned on, the software loads in Demo mode and doesn't let you load plugins or add-ons....at least the software version that I'm using doesn't....unless you're REALLY into trunk-tracking, another Winradio purchase would prolly be an unjustifiable expense....but it WOULD make trunk tracking a lot easier...with two, one radio keeps track of the trunk (control channels, active channels, etc.) and the other does nothing but change and output active channels. With only one radio, sometimes the software has difficulty auto-switching back to the control channel, and have to manually retune back to it...in this area, only a Powerball win would put me in the market for multiple radios...what would have been some semi-exciting trunk-tracking in this city has been nullified by the PD going to digital radios...

Spleen

>Hello all. My BC245XLT is always hooked up to a roof antenna. I have some
>nice coax hooked up to it's BNC jack. The weight of the coax has obviously
>done some damage to the BNC jack, and I need to replace it. Is this possible
>by myself? I am handy with soldering, but remember hearing a lot about this
>unit that the board is epoxy covered. Any help appreciated!

The connector is attached to the case, not the circuit board.

It's easy to replace if you can solder reasonably well.

To reply by email, remove the XYZ.

A little additional info over what the other poster provided. They are
modes of transmission, just as AM and FM are. CW actually stands for
Continuous Wave, but like the other poster pointed out, it is basically
Morse Code...

A friend recently bought a radioshack PRO-92 truncktracking scanner and is having major problems getting anything to come in.He has the police call book so I know the frenquency numbers are correct and he had a pro-94 tracker so he is familar with the hows and whats.All he gets is a small portion of the coversation and a lot of bleeps and distortion.He no longer has the pro-94 to compare the teo scanners to see if its the scanner itself or something he's doing.A few days ago there was an article in th local paper about how the police where getting a grant to upgrade there system o prevent scanners from picking up their(police)conversation.Has anyone heard of this .The state and area is montgomery county,Indiana.
Thanks

a easy way to tell if you are listening to USB or LSB. is that the transmission or the voice will sound like donald duck. sorta like voice inversion on cordless phones. it will be very weak in am mode. but. the radio should auto set if it is USB or LSB. side band is usually and mostly used below 54 Mhz. except for hams that use sideband on 2 meters and such. if you were a ham. would be nice to have a qso to help you on the 2 meter arlp node.

Anyone have frequencies used by agencies in PINAL COUNTY Az (Maricopa,
Casa Grande, Coolidge, Florence)

last night had very bad storm. I do have the Salt River project water
and power frequencies for the Phoenix area but not for down here. SRP
serves the Phoenix area .
APS (Arizona Public Service or a rural electric district) provides
power and irrigation is by
maricopa-stanfield irrigation district
I believe Pinal Sheriff is 158.76

thanks

I have a Yaesu FT 757 GX and a pyramid ps36k power supply. I would like to trade for a base scanner.
The radio was recently sent to yaesu and went through and came back with a clean bill of health.
freebird@cableone.net

581. Sharx and Dev, huh? Re: Urgent: Edmonton airshow frequencies wanted

Newsgroup: rec.radio.scanner
Date: 2002-07-15 19:21:46 UTC
From: cwotan <nyxisnews@spamisbad.hotmail.com>
Message-ID: <ehFY8.16001$xm1.581045@news0.telusplanet.net>
Source record: 45920
Cross-posted to: alt.radio.scanner,rec.radio.scanner,ab.general,edm.general

Well Sharx and Dev, I obviously really underestimated the combined brain trust resident here in the scanner groups. Terrorists would "dearly love" to have the frequencies for air show control (turned out to be 131.750), VFR control, and the tower for Edmonton International Airport? To what end? Would they kill for this information, or just simply head out to the show and spend five minutes and search for the frequencies as I eventually did? I did web search for the frequencies, and came across several conflicting sets for both air show control and teams like the Snowbirds, many of which were apparently either out of date, or just plain wrong. Many of the sites did not indicate whether the broadcasts were in AM or FM. I merely wanted to program my scanner before I hit the show, and wanted to have to avoid programming in frequencies that were not necessary.
If you don't personally have knowledge of the answers to questions being asked, why do you waste your time posting irrelevant messages and painting yourself as uninformed, pseudo-elitist anorak wearing geeks? You may not be, but this is how you come across in your replies.
And what sort of high level matchbook cover mouse detective courses have you recently taken that would allow you to deem my request for the air show frequencies as suspicious? Perhaps if you had taken time to look up the Edmonton International Airshow on the web, you would have seen that the show was Saturday and Sunday, and I posted the message as a last resort looking for the information on the Friday. So, maybe it was pretty last minute.
Suspicious? Yeah, maybe I should have posted a couple of days earlier. Then it would have been not suspicious?
I was not seeking one second satisfaction of a full band plan for my area or anything like that. I have taken the Industry Canada TAFL listings, compiled them on my own, and come up with a pretty interesting database minus all the chaff. Programmed my scanners, and even made them available on the web for people to monitor (and remotely control) who may or may not have the resources required to have their own scanners.

Have you ever watched an airshow with a scanner handy? Boring?

Thanks to the people who mailed me useful information.

The MI scanner law was VERY sloppily written, but it has, thus far, been upheld by the courts. The permit application is obviously based on previous versions of 750.508 which referred to "shortwave." Police calls WERE on shortwav in the 20s/30s of course.

The current amended version of the code has eliminated "shortwave" and says only "...radio receiving set that will receive signals sent on frequencies assigned by the federal communications commission of the United States of America for police purposes...' blah blah blah

The (virtually never enforced) L.A. City Ordinance still has a section entitled "Short Wave Radios" - but the text is similar to MI's amended text (above); L.A. County's ordinance has a particularly broad interpretation of "shortwave radio" - see:
http://ordlink.com/codes/lacounty/_DATA/TITLE13/Chapter_13_10_OFFICIAL_RADIO_BROAD/13_10_010_Shortwave_radio_rece.html

I know we may be talking about "principles" here, and you may be technically correct, but unless you have the time and the considerable resources ($$) necessary to challenge the constitutionality of a state law, I'd forget about it. I wouldn't get hung up on it... if you want the permit, just fill out the app and then you'll be legal. It's simple and I (who live in Calif) got permits for myself, my wife and my 6 yr old son within 2 or 3 weeks.

Got an old broom handle and a bunch of wire coathangers? If you have some spare time you can build a broadband antenna that will perform quite nicely across a broad range of spectrum.

Go to http://photos.yahoo.com/n2uhc and click on "Projects." Look for the bicone.

593. Scanning in Manitoba: a few questions

Newsgroup: rec.radio.scanner
Date: 2002-07-15 21:50:06 UTC
From: toomanyradios@aol.com
Message-ID: <20020715175006.01586.00000398@mb-dh.aol.com>
Source record: 45933

I'm up in North Dakota visiting relatives. Thinking about heading up to Friendly Manitoba for a few days as a side-trip. Given the current exchange rate, it would make for an inexpensive little getaway.

First, what is the procedure for going through Canadian customs these days? Back in the 80s, it was a simple matter to drive back and forth across the border. Haven't done it since 1984, and I'm thinking that maybe things have changed, post 9/11. Is a state-issued drivers license still sufficient ID, or is more documentation required now?

Also, I understand mobile scanners are illegal in Manitoba (?) If so, does an exemption exist for licensed U.S. amateur operators? I have a 780XLT hard-wired in my vehicle, so I really don't want to have to rip it out of the dash in order to enter Canada.

Finally, on an unrelated note, what is the legal drinking age in Manitoba? I have a 19-year-old niece who wants to come with me and do some club-hopping in Winnipeg with her old uncle. She swears the drinking age is 18 up there for both Canadians and non-residents alike. True, or wishful thinking on her part?? (I know this used to be the case, but this was back when it was also 18 or 19 in most U.S. states.)

Thanks in advance for your help.

well. I travel from British Columbia to Washington state. I don't get questioned for my canadian scanners or ham equipment I have installed in the open. The only thing that you may have trouble with is coming into canada. Since you were stating you were just wanting to drive up here for something to do. To get thru better for a few days. Tell them that you were wanting to camp in Canada for a few days cause you love how beautiful Canada is and you wanted to personally experience the feel of what it is like camping in this beautiful land. anyways. hehe. it is the same. We still do not have guns at our border. We are strict but friendly. You just have to have a good reason to visit canada. hope you have fun up here in Canada. If you are a amateur operator. You should give a call out on the irlp 2 meter or 70 cm links.

The code may have been amended properly, however the permit has not. It
still says, "APPLICATION FOR SHORTWAVE PERMIT IN A VEHICLE TO MONITOR POLICE
FREQUENCIES" It was last updated in 1999, so I figure that it would have
been corrected as well, but it has not.

Anyone looking for the application can find it here (ADOBE REQUIRED!):

Hi all

One thing that Devin mentioned is the reason for being in Canada. Tell them that you are going to do some shopping, (We like you spending money and so does customs). DON'T DO LIKE SO MANY AMERICANS DO AND PACK YOUR GUN ACROSS!!! Customs is Federal and do not enforce provincial law. I don't know of any province that has laws against mobile scanners but I could be wrong. I got across the Peace Arch crossing with my Alinco DJ-580 modified to listen to cell and US Customs said nothing but did ask to see my Ham License. I also have needles in my car as that I am a diabetic and nothing said going either way. We still have an open border policy but getting back expect the US Customs to shove a gun in your face but they did that to me back in the 80s before 9/11. I haven't been to Manitoba in years but I do believe that their laws on drinking are the same as in the rest of Canada, either 18 or 19 so she would be able to drink it doesn't matter what country she is from. I will recommend that all of you bring lots of pictured ID and keep the drugs and guns on your side of the border.

Enjoy your trip but don't stay to long or you may never leave.

Will the 235 allow you to change modulation type? Example, the 138-144
MHz range is activity used my MilAir for air-air coms however it is in
AM where most scanners force that range of freqs in to FM.

Next question, can you confirm that it does cover the 225-400 range.
Your eBay listing says it covers "29 MHz - 956 MHz (less cellular)"
however I had seen another site which stated the 235 will not receive
the 225-400 range.

Thanks
George

Beats me. All I know is what I read in the newspaper. You'll have to
ask someone in PDX or Vancouver who is scanning those freqs. I am not.

Best wishes.

each province is different. some are 18. others are 19 andothers are 21. BC has the 3 strikes your out rule if you get caught drinkin. 24 hours is a 215 and so on. 3rd is you lose your licence for life. I went to our RCMP seminar. you have to, before you write the RPAT test. he said if you have ever been caught drinking at all. don't ever ever ever bother applying to be a RCMP officer. We will decline you right away. I have not had to show my ham licence yet at customs. they didn't even know what my licence plate ment. US customs went. VE7 K what is that plate.
I said to them. it is a ham plate. they said, what is that. I said Amateur radio. They said. ok. have a great day. I did find out though. never say you are looking for a job in the paper. amber worded it wrong to customs. she wanted to become a programmer in the US cause it is better $$. but. she phrased it wrong and she was banned for 24 hours. cause we didn't say we wanted to buy a news paper. pricks. manitoba I think it was that has Radar Detectors BANNED though. so be careful.
to my knowledge there is no scanner lawes besides the ones about devulging and such. you can have a cell capable one and all the things that are illegal in the US for a scanner. we are easy here in a way.

Can anyone tell me witch dual band HT's and mobile radios can both receive and transmit at the same time??

I have only found the Kenwood TH 79a and HT that while you are transmitting on 2 meters you can receive on 440.

Again are there any other HT's and Mobile dual band Ham radios that can simultaneously receive and transmit at the same time?

I've had my Icom R2 for about three weeks now,but last week while I was programming it,..it hit me,..it can only tune THREE DIGITS AFTER the DECIMAL,so that means you can't program the (14 family radio frequencies) into it. I even tried to program the (frequencies) slightly,(de-tuned) to see if I could listen to them,but with no luck. What a shame. Has anybody figured out a way around this? Just wondering,Thanks!...Later!

The Kenwood TM-742A mobile (tri-bander) can receive on the other bands
while transmitting on one band.

Any "true" dual bander will do this. The Icom 207 or Yaesu FT-90 won't. They aren't true dual banders.

Too many people skirting the issue here 1st Getting your scanner across
should not be a problem.you are a lic ham. In ontario where i live
drinking ageis 18 More than likely in Manotiba.Yes Manitoba has banned
mobile scanners due to the number off kooks that showed up and or drag
raced the fire trucks to the scene. Bring your radio(s) and have a good time
Welcome to the Great white North

Very inexpensive :-) Don't forget the duty-free shops on the way back.

> First, what is the procedure for going through Canadian customs these
days?

Say you want to do some shopping. Don't bring any guns. It would be a good
idea to have a birth certificate or passport to prove you are a US citizen
in the slim chance they ask..

> Also, I understand mobile scanners are illegal in Manitoba (?) If so,
does an
> exemption exist for licensed U.S. amateur operators? I have a 780XLT

Mobile scanners in vehicles are illegal in Manitoba. Customs won't bother
you but the local police might if you are stopped. A ham license makes it
all legal, although I'm not sure your license would be valid in Canada.
Best solution, pull the fuse, say it dosen't work and confuse them with your
license if you get stopped. If you do decide to scan check
www.scanmanitoba.com.

> Finally, on an unrelated note, what is the legal drinking age in Manitoba?

18 for drinking, buying smokes or driving big-assed semi-trucks. Welcome to the prairies. But I think they lowered the blood/alc from .08 to .05 for driving. One beer puts the average woman over limit.

Source record: 45861

I have a TenTec RX-320 for sale or trade.

The radio is in great condition, (one very minor scratch on the top left corner). I am the original owner and non-smoker. Asking $275.00 + shipping.

I will consider an even trade for an excellent hand-held scanner, (both trunking and non-trunking will be considered).

Please e-mail me direct with any questions and thank you for taking the time to read my post.

John Schneider, KB2COP
thecop@optonline.net

> wondering,Thanks!...Later!
>

Ummmm, read the manual, they "fit" just fine. I have 462.5875 in mine
right in front of me. All you have to do is change the step to 6.25KHZ,
and there it is...It is kind of confusing to program, but it's really not
all that hard..shame on you for not reading the manual...;)

> and transmit at the same time??

The feature is called "cross-band repeat." It should be clearly stated on the radio's description. These radios can simultaneosly receive two VHF signals, or two UHF signals, or one VHF and one UHF signal. And they can transmit on one band (VHF or UHF) while receiving on the other. Or they can act as a cross-band repeater. My Alinco DJ-G5TH does all this as do many (but not all) dual band radios.

It sounds great, but in reality it's not all it's cracked up to be. Do you really want to be monitoring one frequency when you're transmitting on another while you're motoring down the highway?

Agree 110% Nothing more irritating than talking on one band and
the other band take off 'talking' it's a real PAIN. I always kept the
radio function set to mute the subband when the primary band
was in TX. Makes any radio a LOT more friendly :^)

OTOH, the remote cross-band repeater function is pretty handy when
hiking with a large group over hills and through dales.

I checked and it doesn't allow you to change mode...

It doesn't cover the mil band either...

I think this scanner was really meant for covering the 800 MHz Motorola
trunking systems as a priority...

I am forwarding this note by Dave Emery. Scary!

Sorry to be the bearer of bad news, but something of enormous
importance to radio hobbyists has just happened in Washington, and so
far I haven't seen any mention or discussion of it on any scanner or
ham
lists I follow.

I hope this message will alert others to what has just happened
and get people thinking about the consequences...

The House just passed the Cyber Electronic Security Act last night
(7/15/02) by an overwhelming margin of 385-3.

Buried in an otherwise draconian bill that raises penalties for
computer hacking that causes death or serious injury to life in prison
and allows government monitoring of communications and email without
warrants in even more circumstances is the following seeming obscure
language:

> SEC. 108. PROTECTING PRIVACY.
>
> (a) Section 2511- Section 2511(4) of title 18, United States Code, is amended--
>
> (1) by striking paragraph (b); and
>
> (2) by redesignating paragraph (c) as paragraph (b).

For those of you who don't realize what this means ....

Section 2511 subsection 4 of title 18 (the ECPA) currently
reads as foilows.... the CESA will strike part (b) of this language.

Penalties..

> (a)
>
> Except as provided in paragraph (b) of this subsection or in subsection
> (5), whoever violates subsection (1) of this section shall be fined
> under this title or imprisoned not more than five years, or both.
>
>
[The following section will be eliminated by the new law...]

> (b)
>

> If the offense is a first offense under paragraph (a) of this subsection
> and is not for a tortious or illegal purpose or for purposes of direct
> or indirect commercial advantage or private commercial gain, and the
> wire or electronic communication with respect to which the offense under
> paragraph (a) is a radio communication that is not scrambled, encrypted,
> or transmitted using modulation techniques the essential parameters of
> which have been withheld from the public with the intention of
> preserving the privacy of such communication, then -
>
> (i)
>
> if the communication is not the radio portion of a cellular telephone
> communication, a cordless telephone communication that is transmitted
> between the cordless telephone handset and the base unit, a public land
> mobile radio service communication or a paging service communication,
> and the conduct is not that described in subsection (5), the offender
> shall be fined under this title or imprisoned not more than one year, or
> both; and
>
> (ii)
>
> if the communication is the radio portion of a cellular telephone
> communication, a cordless telephone communication that is transmitted
> between the cordless telephone handset and the base unit, a public land
> mobile radio service communication or a paging service communication,
> the offender shall be fined under this title.

What this does is change the penalty for the first offense of
intercepting an unscrambled and unencrypted radio communication that
is
not supposed to be listened to (eg AMPS cellular calls, commercial
pagers, cordless phones, common carrier communications) for hobby
purposes (eg not a tortuous or illegal purpose or for direct or
indirect
commercial advantage or private commercial gain) from a misdemeanor
(one
year or less prison time) to a federal FELONY (5 years prison time).

And further this changes the status of the specific offense of
listening to a cell call, cordless call, a pager, or a public land
mobile radio service communication (eg a telephone interconnect) from
a
minor offense for which one can be fined a maximum of $500 to a
federal
FELONY for which one can be imprisoned for up to 5 years.

In effect this removes a safe harbor created during the
negotiations over the ECPA back in 1985-86 which ensured that first
offenses for hobby radio listening were only treated as minor crimes -
after this law is passed simply intentionally tuning a common scanner
to

the (non-blocked) cordless phone frequencies could be prosecuted as a felony for which one could serve 5 years in jail.

And in case any of my readers have forgotten, a federal felony conviction (even without any jail time) deprives one of the right to vote, to own firearms, to be employed in a number of high level jobs and professions, to hold certain professional licenses and permits, and important for certain readers of these lists absolutely eliminates for life the possibility of holding any kind of security clearance whatever (a recent change in the rules) - something required for many if not most interesting government and government related jobs.

So merely being stopped by a cop with the cordless phone frequencies in your scanner could conceivably result in life long loss of important rights and privileges.

For some of you out there this may seem small potatoes and irrelevant since it merely changes the penalties for an already illegal act (which you are not supposed to be engaged in) and doesn't make anything new illegal. But this is a rather naive view.

The federal government was certainly not going to prosecute a hobbyist for radio communications interception under the old version of the ECPA if the worst penalty that could be levied was a $500 fine - there simply is not the budget or the staff to prosecute people for what would be a very minor offense (equivalent of a speeding ticket). And even prosecuting hobbyists for more serious interception (eg not cellular, cordless or pagers) was still a misdemeanor offense prosecution with jail time unlikely.

So in practice the only prosecutions were of people who clearly had a commercial purpose or otherwise engaged in egregious and public (eg the Newt call) conduct - no ever got prosecuted. And this was doubtless the intent of Congress back in 1985-86 - it would be illegal to monitor certain radio traffic but only a minor offense if you did so for hobby type personal curiosity or just to hack with the equipment or technology - and a serious felony if one engaged in such conduct for the purpose of committing a crime or gaining financial or commercial advantage (eg true spying or electronic eavesdropping).

But after this bill is signed into law (and clearly it will be), it will be quite possible for a federal prosecution of a hobbyist for illegal radio listening to be justified as a serious felony offense

worth the time and effort and money to try and put in jail even if the offense is not for a commercial purpose or part of an illegal scheme. Thus "radio hacker" prosecutions have now become possible, and even perhaps probable.

And federal prosecutors and law enforcement agents get career advancement and attention from senior management in their agencies in direct proportion to the seriousness of the offense they are investigating and prosecuting - nobody ever advances to senior agent for
going after jaywalkers, thus by raising the level of less than legal hobby radio monitoring offenses from a jaywalking class offense to a serious felony for which there can be real jail time it becomes much more interesting from a career perspective to prosecute radio .

And needless to say, such prosecutions would be shooting fish in a barrel type things given that many individuals are quite open on Internet newsgroups and mailing lists about their activities.

And of course this MAJOR change in the ECPA also has the effect of making the rather ambiguous and unclear meaning of "readily accessible to the general public" much more significant, since intercepting something that isn't readily accessible to the general public is now clearly a serious crime even if done for hobby purposes as
a first offense. Thus one has to be much more careful about making sure that the signal is a legal one...

And further than all of this, and perhaps even MUCH more significant to radio on Internet scanner lists ....

The careful, thoughtful reader will note that section 4 has been revised a bit lately, and that this new section 4 (see above) now makes
it a federal felony with 5 years in jail penalties to violate section 1
INCLUDING the following provisions of section 1:

18 USC 2511:

> (1)
> Except as otherwise specifically provided in this chapter any person who -
>
> (c)
>
> intentionally discloses, or endeavors to disclose, to any other person
> the contents of any wire, oral, or electronic communication, knowing or
> having reason to know that the information was obtained through the
> interception of a wire, oral, or electronic communication in violation
> of this subsection;
>
> (d)

>
> intentionally uses, or endeavors to use, the contents of any wire, oral,
> or electronic communication, knowing or having reason to know that the
> information was obtained through the interception of a wire, oral, or
> electronic communication in violation of this subsection; or
>
>
> shall be punished as provided in subsection (4) or shall be subject
> to suit as provided in subsection (5).

This seems to have changed the status of revealing as part of a
hobby list any hint of the contents of a radio communications that
might
or might not have been legally intercepted from a potentially minor
misdemeanor offense or less to a serious felony. Thus if a court
finds
that any communication reported on an Internet list was not legally
intercepted, felony penalties apply for publishing the information
even
if the interception was for hobby purposes (which of course most
scanner
list intercepts are).

Most significant for many of us, the section 18 USC 2510
exceptions to the prohibitions on intercepting radio communications in
18 USC 2511 are pretty silent about military communications - not
prohibited, or specifically allowed except as "governmental
communications". So it is possible that military comms might be found
to be illegal to intercept and thus passing around information about
them a potential felony, even though of course the military has
complete
access to the world's best COMSEC technology and uses for anything
sensitive. But in a paranoid age (post 9/11) anything goes... and if
the government wants to go after scanner lists (like Milcom) it might
now be able to do so with prosecutions with real teeth and jail time.

Thus the legal climate has fundamentally changed, and one can
assume that since the Bush administration has been pushing for the
passage of this bill that they perhaps intend to start prosecuting at
least some category of radio under the new provisions - no
doubt as an example meant to scare the rest of us into handing our
radios in at the nearest police station...

So yet another blow to the radio hobbies.... and a big one
indeed...

Several older radios do. Yaesu FT-4700, FT-470, FT-530, FT-5200, FT-5100, Icom IC-2340 and others. They do not do U - U or V- V , but will listen on one band while transmitting on the other. This is IDEAL (almost mandatory) for satellite use like UO-14, SO-41, and AO-27.

BOTH of YOU are RIGHT!!!...After trying it,the Icom R2 WORKS
BOTH WAYS in RECEIVING the (14 family radio frequencies). Yeah,I see
what you mean,now that I've tuned it with the (6.25 step). You'll see
a tiny (50) in the (upper right hand corner) of the display,next to
the main frequency. Yeah,I have to admit,I haven't read EVERY SINGLE
WORD in the BOOK,just chunks of it here and there. THANKS!!!...Later!

It would appear to be similar in operation to the Radio Shack Pro-41 (a handheld, but with similar features), for which there's an operating manual at
http://support.radioshack.com/support_electronics/doc7/7309.htm

If those instructions don't work let me know & I'll dig further.

661. Scanner suggestion - MilAir etc

Newsgroup: rec.radio.scanner
Date: 2002-07-17 02:28:10 UTC
From: Barun Gupta <barun@worldnet.att.net>
Message-ID: <_C4Z8.105596$UT.6819178@bgtnsc05-news.ops.worldnet.att.net>
Source record: 45797

I am interested in getting another scanner. The key features that I am interested in are:

a) Coverage upto 2000 MHz (i.e. 2 GHz)
b) Not particularly interested in HF (have enough radios for that)
c) Particularly interested in the 225-400 MHz band
d) Prefer the option of being able to switch modes (between NFM and AM at a minimum). So for example I need to be able to put the radio in NFM mode in the 225-400 MHz band.
e) Not particularly interested in trunk tracking
f) Only interested in base models (no handhelds please)

Can anyone tell me which radios have these features?

gee. if you are totally interested in having cell. I WILL sell my canadian scanner to you. but heck. as Don said. it is very very boring. If you have to hear conversations. Why not listen to your neighbors cordless phone or baby monitor. they say lotsa shit on those about you besides other things. hehe. but still boring. do something useful andget the 900 Mhz baby monitor frequencies. scan the 900. and 43 - 49. much more interesting then cells still. I have had many cell capable radio's. I haven't scanned there for almost 3 years. besides the odd scan when I was very very bored outa my mind.

Any of a multitude of multitude of wide band receivers from
manufacturers such as ICOM, Yaesu, Yupiteru, AOR, Alinco, and others
will have these features. They will typically cover from 100 kHz to
several GHz, including the HF bands.

Read the reviews on www.strongsignals.com, and others.

Check the dealers sites such as Universal Radio, Ham Radio Outlet,
Javiation, Bandercom, and others.

Buy some communications magazines and read the adds.

only in canada though. :(not much activity.

it is on this main page.
http://www.rac.ca/tmp-index.htm

rac is radio amateurs of canada.

then the link that gives more info is.
http://www.rac.ca/220survey.htm

yes it is only 2 mhz. but that is a huge chunk if you think of it.
canada is 220 - 225 Mhz. and I guess others are 222 - 225. still. If I could
get some 220 gear. I would use it. Since most of our canadian equipment that
is easily available are 6meters, 2, and 70 cm. but no 220 stuff. Besides the
strange propagation that sopposedly goes with our 220 band. Why isn't there
more transievers for it.:(we are losing our band again to the commercial.
due to lack of use. Our 2 meter repeaters are even dead here. and it is in
the heart of Industry canada too. :(well one IC offices. I hope we don't
lose everything to them.

hi folks!

i had got a nice old scanner.
the sears cardomatic is a 16 channel scanner with optical cards.
i still miss a manual for this scanner and the frequency table.
how can help me ?

i think the sears isn't similar with the SBE optoscan!!
the SBE use 10 ch cards. the sears use 16 ch. cards and (i think)
have a bigger frequency range ...

please send me a email!

many thanks
mike

Although it will not go up to 2000MHz but it is an excellent Milair
Scanner which meet all you other features. The BC 780 XLT. I now have
three of them that are 100% being used for MilAir. And you can change
modes on any freq which is something some other scanners don't have.

Then you HAVEN'T been watching closely enough.

This change DOESN'T make anything illegal that's now legal,
it simply changes the penalties for what is ALREADY illegal.

But since the government has NOT bothered prosecuting many people for
CLEAR violations of the existing law, thinking this will make them do so now
is unrealistic.

Hello

Can someone help me how I can remove the protection of the Cellular Band
on my Sony WaveHawk ICF-SC1PC.

I find a lot of mods on the web but no tells me how the 800Mhz Band can
made be free for the receipment of Cellular Phones?

Regards

Gerard

Btw, I saw where you Canucks are doing are doing some pretty good
shooting over in Afghanistan.

One guy took out an AQ type at over 2500 yards with a 50. His first
shot blew up a ceramic water jug the AQ was holding in his hand.

For whatever reason, the AQ doesn't react. He keeps on going about
his business, like nothing happened. This proves to be a mistake.

Canuck figures that from that distance, he can risk one more shot
(you don't want to take too many -- shooting reveals your location).

He aims just a heatbeat to the left.

Bang!

Good-bye AQ type. Hello Allah.

That is the longest recorded sniper kill in history. I'm not sure
how they measured the distance, but I doubt they used a tape
measure.

You Canucks are okay.

Harry ;) <--- and your boat drivers ain't bad either

It was Yankee-manufactured ammo, however.

You don't want to use one of these. Since the device does not include amplification (to offset the signal loss caused by splitting), the result is poor performance on both the scanner and the car radio.

Source record: 45835

But keep in mind that with the switch in the "mod" position you
can only scan frequencies in the same band, which I think is
500-900Mhz. So the manual switch solutions is a bit limited
in it's use.

And why are people saying that cell monitoring are boring?
They must be living in a boring neighbourhood.
Each time a listen I get a laugh when I hear the guys trying
to come up with excuses to the wife why he's gonna be late
home and the next minute when he calls his girlfriend and
talks about what kinky stuff his gonna do to her when they
meet in a couple of minutes. Not to mention all the calls
that take place without the persons having a clue of that
it's a radiosystem they're using that can be monitored by
anyone with a decent scanner.

(I do not live in the US)

Ouch!

Fwiw, here's that article I mentioned. It seems that I was somewhat
off about the distance. Not 2500 feet -- 2430 meters. Now *that*
is one hell of a shot.

Note that we apparently tried to drop on these guys too.

Toronto Star
Jul. 10, 01:00 EDT

U.S. bullets help Canadian snipers set world record

Killing shot made at distance of 2,430 metres

Stephen Thorne
Canadian Press

A world-record killing shot by a Canadian sniper detachment in
Afghanistan could never have been made with the ammunition they were
issued when they left Edmonton last winter, the triggerman said in a
recent interview.

The Canadian .50-calibre rounds have a maximum range of between
2,200 and 2,300 metres.

But the U.S. rounds, they discovered, "fly farther, faster," said
Cpl. "Bill", a 26-year-old native of Fogo Island, Nfld.

The two-man Canadian team, coupled with American Sgt. Zevon Durham
of Greenville, S.C., made the kill from 2,430 metres, or nearly 2
1/2 kilometres, on the second shot.

This feat is the equivalent of standing at the foot of Yonge St. and
hitting a target in the intersection of Yonge and Wellesley Sts.,
just north of College St.

The first shot blew a bag from the hand of their target, an Al Qaeda
fighter walking on a road.

"He didn't even flinch," said Bill, who spoke on condition that his
real name not be used.

"We made a correction and the next round hit exactly where we wanted it to. Well, a bit to the right."

The kill, one of more than 20 unofficially accredited to Canadian snipers during Operation Anaconda in Afghanistan's Shah-i-Kot Valley, beat the 35-year-old record of 2,500 yards, or 2,250 metres, set by U.S. Marine Gunnery Sgt. Carlos Hathcock in Duc Pho, South Vietnam.

Soldier of Fortune magazine estimated the number of kills made by the Canadians after talking to several U.S. soldiers in Kandahar for a cover story in its August edition.

The snipers themselves will not confirm the figure.

But judging from accounts given by Canadians involved in the first major coalition offensive of the Afghan war, the figure of at least 20 sounds conservative.

The 800-strong 3rd battalion of the Princess Patricia's Canadian Light Infantry is pulling out this month.

They'll first go through a reintegration process on the Pacific island of Guam before heading home to Edmonton.

About 100 British Royal Marines, too, wrapped up their last combat mission in Afghanistan yesterday after four months in Afghanistan.

The five Canadian snipers, outfitted with British desert fatigues and an array of equipment from all over the world, were divided into two detachments that earned the respect of their American brothers-in-arms after helping rescue dozens of paratroopers pinned down by enemy fire.

The five have been nominated for one of the highest awards given by the United States military -- the Bronze Star, two of them with Vs for Valour, marking exceptional bravery.

Awarding of the American medal, which was to have been done at a ceremony along with other Anaconda veterans in Kandahar in April, has been delayed by Canadian protocol officials.

But more important to the Canadians are the gestures from their American brethren who -- while nearly killing them several times over with "friendly fire" -- owe many lives to their shooting skills.

"They trusted us to do our job, without question," said Master Cpl. "James," a 31-year-old native of Kingsville, Ont., who like Cpl. Bill asked that his identity not be revealed.

At one point during a series of battles, one of the Canadians was without his rifle. Enemy bullets were hitting the earth all around.

Mortars were dropping in front and behind them, some within 10 metres, bracketing their position and getting closer all the time.

"They really hammered us," said Bill.

He tried to get to their rifles but couldn't. Finally, an American sniper tossed him his rifle and said: "Here, you know how to use this better than I do."

They held off the enemy until darkness descended and escaped.

"They were instrumental in helping us achieve our goals out there," said 1st Lieut. Justin Overbaugh, 25, of Missoula, Mont., the soldier who recommended Bill and James for Bronze Stars.

"They are professionals; they are very good at what they do; they train hard, they are very mature, they are tactically and technically proficient so when it came time to do business, they were on," he said.

"If they told me I was going out right now, I'd be begging, kicking, screaming, crying for them to come with us."

Bill and James said they pulled off several shots from 2,400 metres or more.

"Shots out that far are 60 per cent skill and 40 per cent luck, or vice versa," said Bill. "Usually, it takes two or three rounds, sometimes five.

"Normally, a sniper wouldn't take that many shots, but they were out so far we felt confident they couldn't tell where we were."

One morning, the two Canadians were set up overlooking a compound when Al Qaeda fighters started "pouring out of buildings like ants."

Bill started shooting while James called in a mortar attack, followed by B-52, F-16 and Apache helicopter strikes.

In a separate incident, Bill and James found themselves looking up at a large dark object screaming out of the sky directly above them at a 220-kilogram American bomb.

"We hit the deck and covered our heads with our hands," said James. The bomb landed 30 metres away, nose in, and never went off.

"By the grace of God, it was a dud," said Bill. "It landed 15 metres from the B company (U.S. 101st Airborne Division) trenches. A guy got up, walked out of the trench and kicked the thing."

Capt. Paul Madej, Operation Enduring Freedom chaplain, who debriefed the Canadians, described them: "The Canadian snipers are professional, well-trained soldiers who walked into harm's way and fulfilled their mission. They represent the best and they have our respect."

I am having some problems with my BC 760 XLT.

Seems as though that even though it apparently has the CTCSS tone board in it, it doesn't work.

I've entered in the proper pl tones, for the right services and yet nothing is coming through.

Yes, I know how to program this properly, and yes, it has the tone board in it.

It will allow me to put the tone in on top of the freq. but nothing comes through. And I've tested it with active frequencies while there has been chatter on the channels.

Any (Good) suggestions as to what may cause this?

Is it possible that the cable that connects to the serial port to program a
Texas Instrument calculator would work for programming the PRO-64?
It would be great if it would.
Thanks
James

The TI cable will not work. For information on the cable and some programs that work with the PRO-64 try here: http://members.cox.net/kplotkin/scanner.htm. The LOAD64 file has cable information. As an alternative you can buy catalog number 20-048 from Radio Shack to get a cable for the PRO-64. There is also software in this package but it does not support the PRO-64. Doesn't matter since there are several freeware programs on the net that do.

FOR SALE---Optoelectronics R11 Nearfield Test Receiver.
Covers 30 MHz to 2 GHz. in 1 second. (cell-blocked)
Locks onto signal and plays demodulated signal thru the built-in speaker.
Condition is perfect mint; no scratches, dings, dents, or use marks
Price includes: R11, telescoping antenna, charger, manual, and original box.
Asking $200 including shipping to you in CONUS.
Money Order only, please.
Reason for sale: Have an Optoelectronics Explorer now.

One important detail: When building the cable, do not include the
resistor. I know the resistor is in the official spec from GRE, but I
have yet to encounter anybody who had a cable with a resistor work.
I've yet to encounter anybody who had a cable without a resistor not
work.

Building the cable is very easy. Buy a mini stereo patch cable and
cut it in half, so you have a nice factory finished end. Then there
are just two solder connections at the DB9.

When it locks onto a signal, do you have any choice of the
demodulation mode, such as AM, FM, etc, or is it always FM? With what
IF bandwidth? What is the sensitivity of this, are there any
settings?

Pretty soon you will need a government-issued permit to listen to ANY radio transmissions besides AM/FM/TV broadcast.

Don't believe me? Wait and see. It will be done under the guise of "homeland security", of course.

Wrong; current law, strengthened by recent rulemaking. They're probably dying
to make an example of someone too.
Not the best time to air undercover comms.

715. Yaesu VR-500 missing frequency range?

Newsgroup: rec.radio.scanner
Date: 2002-07-18 17:05:38 UTC
From: Todd Beets <tbeets@cox.net>
Message-ID: <ah6sh3ash1@coset.qualcomm.com>
Source record: 45755

I just purchased a Yaesu VR-500. I was aware that cellular frequencies were blocked (by law) but I found another frequency range that is skipped/blocked on my unit.

When manually tuning (up or down), the scanner jumps straight from 620.8500 MHz to 629.3000 MHz. I discovered this when trying to tune in TV 39 (local NBC broadcast affiliate in San Diego) which is right in this range but could not. I cannot direct-enter any frequencies in this range as well -- the scanner just beeps when the ENT key is hit.

Can anyone let me know whether this is normal for a VR-500 or whether I should explore a replacement?

Thanks much for any info,
Todd

716. Can digital cellular be scanned?

I have an unblocked Uniden UBC 3000XLT for auction on Ebay with just 3 days left. Please take a look. The battery pack has been rebuilt with fresh cells and holds a great charge. It has no blemishes that I can see. Take a look!

Digital signals can NOT be picked up with a BC200 scanner. What you hear are analog signals from analog phones.

the only time is when the digital phone is on the fringe area's of the digital network. then it automatically goes to analog. you will know when you auto switch to analog. it soulds sorta snowy and such. that is the only time you can be heard on digital phones.

That is about as low as you go. One hobbiest threating to turn in
another hobbiest. How low does it get. Each day my option of Al
Stern get lower and lower.

Current law has not been strengthened yet. It is true the House has passed it however the House passing a bill does not make it a law. Its doesn't become law until the Bill is signed by the President.

I'm sure he'll sign it. I just wanted to make sure the facts were
correctly stated which is that it has not been signed into law as of yet.

It's not even on the Presidents desk for a signature as of yet.

Mine is that way also. There are OTHER holes, as well. Don't recall where
they are at the moment.
I have heard that the reason they are there is to prevent the possibility of
picking up cell "images" as well...

From my Yaesu VR-500 review in Feb. 2000 Monitoring Times:

Frequency coverage (MHz):
0.1 - 1299.9995 except gaps at cell phone bands and
620.9 - 629.3, 784.6 - 797.195, 807.1 - 819.695 MHz

The less expensive VR-120 has several additional gaps.

George,

Alan made no such threat whatsoever and you know it! This is another example of your provocative and antagonistic attitude. why not let others have their say even if you may disagree with them?

While we are concerning ourselves with the opinions and posts of others, can you explain your obsessive concern with prostitution "stings" and your intense irrational anger when you learn of one going down in your area? This seems to be a never ending source of fascination for you and you seem uncommonly worried about the prostitutes (and their "Johns") being apprehended. I understand a healthy interest in civil liberties, but these incessant public eruptions of vituperation every time you hear one on the radio is a bit overboard to my mind.

I have recently aquired a Bearcat III 8 channel crystal scanner and am looking for a schematic for it, and also possibly a copy of the original owners manual. Have try searching with google and msn search and seem to come up with everything else but what is related to this scanner. Can anyone help?

Thanks in advance.

I am looking for crystals in the 144-170 Mhz range for a Bearcat III scanner. Email to kc8pmxNOSPAM@diamondcs.net (remove NOSPAM to email direct) if you might have some scanner crystals you may be interested in getting rid of. Frequencies of special importance within the above range are in the 150-156 range, but there are some others with the 144-170 range I am interested in also.

Thanks.

We live in a city that has many more seriouse crimes which the police do
not respond too. Reason "no available units". Why are there "no
available units"? Because there are on average 6 cars and 14 officers
tied up on these stings at an average cost of $600/hour(source: Daytona
Beach News Journal). The last sting ran from 10 AM to 7 PM, 9 hours at
a cost of $5,400. This is a city who is running out of money due to
all the "special events" such as the Daytona 500, Pepsi 400, BCR (Black
College Reunion), Spring Break, and Bike Week. These events don't
bring enough money into the city to pay for the extra Police protect
needed for the additional 500,000 people each of the above events bring
into the city. But yet we have time to spend over a 1/4 million dollars
per year on these stings which do nothing to better the city.

Now you have your answer.

Dan, say hello to Glenn....

If it is two years this months since Bill Cheek died, then please
let's spend a moment and remember him fondly.

No doubt he was an extraordinary guy. Even though his outspokeness and
strong views sometimes made him enemies on this NG, his contribution
to our hobby remains beyond any doubt. I still have his "Scanner Mods"
book, and I do admire his insight, intellect and the hard work which
must have gone into this book.

The stress from being dragged handcuffed out of his home and
investigated by FBI, then having to go through courts accused for the
unspeakable "crime" of making and selling simple op-amp comparators to
fellow hobbyists (data slicers for the reception of 4-level FSK
signals) must have surely contributed to his premature death.

Rest in peace, Bill Cheek, we miss you.

Pat

PS I have attached one of Bill's last memos, dated November 3, 1999.
He died less than 8 months later.

CONTENTS

THE MEDICAL SITUATION
THE LEGAL SITUATION
IF YOU WANT TO HELP?

THE MEDICAL SITUATION
=====================

On October 12, I had the first of a radical
series of chemotherapy treatments for my
diagnosed Stage IV Non-Small Cell Lung Cancer.
Yesterday, I underwent the second of these
treatments. Four more treatments are on the
every 3-week schedule. I'll be evaluated in
mid December and again in February when the
chemo series has completed.

So far, I'm doing ok. The first week after
a chemo treatment is pretty worthless - I
get sicker than a dog on rat poison. But then
I get to feeling better and have 10-14 days
of modest productivity before the cycle repeats.

I'm fairly bald now. Probably will be totally
bald in another 2-3 weeks. I've lost 35-lbs or
so from my high weight of 220-lbs. I stopped
smoking on October 12, after 40-yrs of 1 to 3
packs a day. During September, I cut back from
a pack a day to 5 cigs a day, so when my chemo
started on Oct 12, the total quit wasn't so
harsh on my "system". The chemo helped, too.
I don't even feel like eating much.... and the
thought of smoking was repulsive some of the time.

I am eating better than ever, though. My system
tells me what's good and what's not. I'm down to
3 cups of coffee a day from a dozen or more. I
drink a lot of 7-Up and fruit juices instead. My
diet includes lots of fish, veggies, soups, fruit
and wholesome stuff. If it's not wholesome, something
about my system dislikes it. Ferinstance, Doritos
taste like cardboard to me now. Yuk! Alcohol tastes
bad, as does excessively fatty stuff.

The funny thing here is that I'm not intentionally
on a "health kick". My system seems to have honed
up in an effort to let me know what to eat and not.
I didn't exactly intend to quit smoking since the
doctors said it wouldn't make any difference now.

But my system told me to quit.... and I could...
and did, despite several failures over the years
prior.... I remember a terrible withdrawal in the
mid 70's when I quit smoking for 3 days......

So what's the future hold in store? Right now,
there is no way of telling for sure. The original
diagnosis and prognosis are firm in that I have a year

or less to live. I have learned that my attitude counts for a lot, though. That's why I have an optimistic outlook and am becoming attentive to the demands and needs of my body. But I am not a zealot or anything close - just practical and modestly philosophical or religious. I learned that others with cancers and treatments like mine, steeped with good attitudes, went on to live for several years, and some even had total remissions!

I'd say that's something to hope for. And pray for. And to work at. The process consumes my day.....

THE LEGAL SITUATION
==========
Apparently all charges against Cindy were dropped at a hearing held in New York on October 12, 1999. At the same time, I was indicted for the following:

Re: U.S. vs Bill Cheek
Criminal Docket No. CR-99-0914

COUNT ONE

On or about and between May 28, 1998 and March 31, 1999, both dates being approximate and inclusive, within the Eastern District of New York and elsewhere, the defendant BILL CHEEK did knowingly and intentionally send through the mail and send in interstate commerce electronic, mechanical and other devices, knowing and having reason to know that the design of such devices rendered them primarily useful for the purpose of surreptitious interception of wire and electronic communications, to wit: transmitted Mobile Data Terminal and pager communications.

(Title 18, United States Code, Sections 2512(1)(a) and 3551 et seq.)

Grand Jury and John L. Smith, Assistant US Attorney
Eastern District of New York

I pleaded NOT GUILTY and the court was advised that I had been diagnosed with terminal lung cancer, so any further action was suspended until sometime in April, 2000. I probably won't know any more until then. What I do know at this time, however, includes these points:

1. I sent nothing of the above charge through the mail and interstate commerce. (Period!!) And

this is not a matter of semantics, either!

2. I had no knowledge of or reason to know that
the "data slicers" we did sell were "PRIMARILY
for .... interception of.... MDT's and pagers."

I do know that the "data slicers" do a lot more
legal stuff than anything illegal. However,
the data slicers don't do anything of an
"interception" nature. They only turn analog
audio signals from a scanner into square waves
so a computer can process them. Nothing more
and nothing less.

In order to do any illegal interception, ALL the
following elements are required: Scanner with
an NFM discriminator output jack, a "data slicer",
a computer connected to the "data slicer"; other
connections, and appropriate software.

I only provided the generic "data slicers" for
profit, and gave away a variety of FREE public
domain software on floppy disk, most of which
is LEGAL (Trunk tracking, fax, Morse code, etc).

I did not provide the scanners or discriminator
jacks, nor the computers or connections for the
computers to "data slicers", nor any signals to
be decoded.

At worst case, I sold a "stock, trigger, and
barrel; but no firing pin, breech, nor ammo.."

CONCLUSION: The law enforcement branch of the
federal government is attempting to usurp the duties
of the legislative and judicial branches. Isn't
this unconstitutional?

IF YOU WANT TO HELP?
====================

The legal fight is now dependent on my medical
battle. It's moot if I don't survive. I did
plead NOT GUILTY and feel I can prove it in trial,
so there will be legal costs sooner or later.
(I'm counting on surviving!)

Right now, it's the medical costs that are the
killer - me without insurance. So if you want
to HELP, here are several ways that count for
a LOT, individually and in combo:

1. Pray for me! Pray that the treatments are
effective and give me more time to do my

job here on earth. And pray that I can
work and earn the money to pay the costs.

2. Keep me informed of any new developments on
the lung cancer scene. No one, including the
doctors know it all. New things are learned
every day. If you hear ANYTHING, let me
know or send a reference for me to check out.

3. If you can afford it, you can donate to my
medical/legal fund established as a separate
account for that purpose, as follows:

Contributions can be sent directly to:

Union Bank of California
Acct# 0771354719
8359 Mira Mesa Blvd
San Diego, CA 92126
Attn: Rhonda Smith or Kevin Smith
(619) 230-3800
payable to: Bill or Cindy Cheek
or Cynthia Cheek trustee for William D. Cheek, Sr.

or, if you prefer:

Cindy Cheek
PO Box 262478
San Diego, CA 92196

==========

That's all for now. If you want to keep
posted to the latest, you're already on my
mailing list and will stay there unless you
ask to be removed.

Again, please include us in your prayers!

Hugs to all,

Bill & Cindy

I'm in the process of making some upgrades to the
http://www.MilAirComms.com website and have a question.

What is the normal screen resolution you normally use? 800 x 600 or
1024 x 768? Currently its designed for the old 800x600 monitors however
with all the newer computers and laptops being able to do 1024x768 or
better I'm hoping more people are starting to make use of the higher
resolution.

Please let me know.

I still stick with 800x600 for general use. It seems to me to be the
best blend of font size, icon size, and screen content.

If needed, I can switch to higher resolution for specific tasks.

If I am browsing and run across a web site that is wider than 800,
unless it looks damn important, I generally skip it.

Put something on your site which tracks resolutions used... See what the most common is.

I use 1024 x 768 screen resolution.

However, except when viewing sites that require it, or large art images, I _never_ maximize my browser windows. I like to be able to have several applications and browser windows visible simultaneously on my desktop. Often I have more than five browser windows open as I right-click from a search site or main site, opening a new window with each click. Then I can look at each new page much quicker than I could if I navigated through them using a single window. Once I've read the first one, they're all there waiting for me to read instantly.

So my browser windows are much smaller than my screen. I'd estimate the image area in each is about 710 x 300. Sometimes I resize them if the site requires it.

I'm sure that lots of people do this. That's why percent-based page design is often preferred over pixel-based design.

With all good wishes,

Excellent, that was exactly what I was looking for. My site has tons of stats which I use however screen size isn't one of those.

I person use 1024X768 and have for a long time. I'm suprised that there is till a high percentage of people still using 800x600 as most computers over the last 1-2 years will support the larger size. I guess it comes down to people eye-site :)

Nothing fraudulent about the review of Antenna Warehouse on the site.
In fact in the past 2 weeks I've had 3 people emailing thanking me for
the review. As a result of my review they bought the Antenna Warehouse
Scanner beam and all three are very happy with it.

Digital is fairly new around the area here. It's coverage is still somewhat limited. Only recently did they start offering packages that combine digital and analog services.. Guess they got too many complaints by people with astronomical bills due to the roaming charges that are associated with the analog service. Before recently, you would have to carry two separate plans, one for each. Not very economical... Most people opted to go back to analog after they found out about all the roaming...

Yes, analog is still VERY popular in this neck of the woods... Digital is just too scarce here... Basically it's a local thing. I think the coverage area is pretty close to a big circle with a radius of about 7 to 12 miles depending on the amount of hills and buildings in whatever general direction... It's not too bad though, because of the limitedness of it, the rates are decent... Unlimited minutes, anytime, for $30 a month... It's cheaper than a house phone around here, and a LOT more portable! The house phone is no longer hooked up for just that reason...

Yeah, their site must not be too good...

I'd hate to even imagine a nice 17" or even a 19" monitor going to waste
with an 800x600 resolution... Monitors that size are capable of so much
more without compromising readability... Of course, an even worse thought
are those that leave the refresh rate set at "default" or "optimal"... They
must have some REALLY sore eyes... Perhaps if they adjusted the refresh
rate, they could use a better resolution because their eyes wouldn't hurt so
much? Thought to ponder... :)

800x600 resolution to me make me feel like I'm using a Commadore 64
Computer on a color TV screen.....

I have seen most users with a 17" CRT or 15" LCD use 1024x768, while the 15" CRT users use 800x600.

If I see a website where I have to scroll right, I generally will find another resource. I would say design the website for the lowest resolution that visitors have, which in this case is 800x600. In a few years this will probably be 1024x768.

You should probably keep it at 800x600 since thats what most sites
tend to use. Plus, someone might not have their browser window
maximized even if they do have a 1024x768 screen.

Our web guy, here at WeBuildHighways <http://www.odot.org> builds
everything for 800x600, because he can be pretty damn sure that
it'll fit on just about everything without having scroll bars on
bottom or side. We get lots of hits, and very few gripes once he
started building for that size and imposing it as a standard.
When we built pages for larger sizes, we got 5 to 20 complaints
pwe week. Now we get none.

He and I both use 1600x2000 screen sizes, because we need the
real estate, but not everyone has hardware to support it.

Source record: 45717

Buried in deep in H. R. 3482 (just passed overwhelmingly by the US House of Representatives) is an obscure little section:

>SEC. 108. PROTECTING PRIVACY.
>
>(a) Section 2511- Section 2511(4) of title 18, United States Code, is amended--
>
>(1) by striking paragraph (b); and
>
>(2) by redesignating paragraph (c) as paragraph (b).

The new USC 18 Section 2511(4) would read:

> (4)(a) Except as provided in paragraph (b) of this subsection or
> in subsection (5), whoever violates subsection (1) of this section
> shall be fined under this title or imprisoned not more than five
> years, or both.
> (b) Conduct otherwise an offense under this subsection that
> consists of or relates to the interception of a satellite
> transmission that is not encrypted or scrambled and that is
> transmitted -
> (i) to a broadcasting station for purposes of retransmission to
> the general public; or
> (ii) as an audio subcarrier intended for redistribution to
> facilities open to the public, but not including data
> transmissions or telephone calls,
> is not an offense under this subsection unless the conduct is for
> the purposes of direct or indirect commercial advantage or private
> financial gain.

Basically, by deleting the old (4)b text this jacks up penalties for scanning phone calls and the like to a felony. No first offense provision, and full prosecution up to five years in Prison. It doesn't matter that you're a hobbyist doing this just to see if it's possible. If you're caught with cell-phone frequencies in your scanner, you're screwed.

Folks, I know you all like to rant about the ECPA. Well, now is the time to rant at your congresscritters for not having caught this. There isn't much time before this bill is resolved with the Senate version and sent to the Oval Office for signing.

Don't post here until you have sent something to an elected official. I don't want to hear from you sanctimonious idiots who post all sorts of discontent to this newsgroup but can't write a letter to your elected officials. LET THEM KNOW WHAT YOU THINK OF THIS STUPIDITY.

You have been warned.

What is this strange area you live in?

In most, if not all, areas of the US, the transition between operarting on an analog cell site and operating on a digital cell site is seamless. Of course, you need a dual mode or tri-mode phone to use the digital cell sites.

As far as roaming, most local or regional plans charge you 65 cents/minute, or so, if you are operating outside of your home area (or roaming, as they call it). The cost of a roaming call is the same whether you are at a digital site or an analog site, or us a combination of the two. The point is that you contracted for some number of minutes per month to be used within a certain geographical area. If you roam outside that area, you have to pay for it. Makes no difference whether the sites involved are digital or analog.

If you want to completely avoid roaming charges, there are plans available which allow free roaming on either all your carriers nationwide cell sites, or b) any carriers nationwide cell sites.

As far as the coverage for a given cell site, it is designed to be fairly small and limited. That is what allows the reuse of the same frequencies at thousands of cell sites across the country.

Walt

>
The transition to analog is seamless, except for the bill. Basically the
company (CellCom) rents airtime from the local tower, which is owned by
another cell provider. Due to restirctions, CellCOm isn't able to put up
their own tower, so they stuck with the setup. If you wander too far from
the digital signal, you wind up on another providers analog system, thus the
reason for the roaming charges...

> As far as roaming, most local or regional plans charge you 65

Well, I've tried all the various resolutions on several 17" monitors. I
prefer 800x600 as my default desktop.

It could have a lot to do with the quality of one's corrected eyesight,
and how close one wants to sit to the monitor.

I find the use of multiple monitors to be much more useful than
scrunching down the size of the icons and type on a single monitor.

```
Quite true as well. I just upgraded my Video card a few weeks ago, and now
use the dual monitor feature it has... Very nice indeed...

Seems to me the only people who get caught doing this are the ones who quite stupidly announce to the world what they have done....

Then they blame congress for passing a law to make their stupidity a crime. Case in point: the newt gingrich scandal. Another case in point: Keith Knipschild's neato little MDT monitoring page - the demise of which brought about the worst setback to digital signal monitoring since the very idea first appeared in someone's pointed little head.

Let them pass a law. So what. People who monitor cell phones and blab about it deserve to be felons. Maybe then we'll all think twice before shouting from the rooftops "LOOK WHAT I DID".

BTW: I did write my congressman - to congratulate him on finding a way (FINALLY!) to make being stupid a criminal offense.

Next step - the death penalty for newsgroup spammers....

Patrick-

Your words are very noble, & should be followed by those on this news group.
We should try to fondly remember the few positive aspects that he shared
with us
& forgive/forget all the bad things. Why many people were angry at him for
his
actions, it seems wasted energy to still carry such negative beliefs.

For those who felt that he should some how pay for the bad he committed,
remember that he came down with lung cancer after many years of smoking,
had no health insurance thus leaving the medical bills for his surviving
family
to cope with, his multiple problems with the law left legal bills for his
family
to cope with, he was publicly caught in lies several times, he was kicked
off of 2 different mail lists due to harassment he dispensed, and lost his
internet
service provider (san.rr.com) due to harassment he dispensed.

I believe he suffered enough & should be allowed to rest in peace.

Personally, I have never liked it when people attacked him, because
the wrongs he committed do not make other things right.

I use 600x800 on my 17" monitor. My monitor is sharp enough to use 1024x768 but I've tried it a few times and thought it was too small. However, ALL my friends and relative either use 600x800 on their 15" monitors (including my 10 year old son on his 15" monitor!) or 1024x768 on their 17+" monitors. Perhaps I'll give the higher resolution a try again. Perhaps I need new glasses again (it's been 2 years since my last new ones <g>)

Very true, of all the above events BCR draws the lesser amount of people
however costs the city the most in Police and Garbage fees. That was in
our local paper several months ago.

During Bike Week (which draws more people than Daytona 500 week) I feel
no fear of walking down main street in Daytona. During BCR weekend its
very scary. I had to go downtown one day during BCR, I never will do
that again.

I have a Government surplus eavesdropping pro-2006 with " factory "
I.F. slicer output and other factory Federal mods ...!! Maybe the
box too, still ..dunno until I look . Backlight a bit dim from many
Federal hours of use, but easily replaceable for about $35 at several
web sites. (still OK , tho) This radio will operate ALL the
digital programs like Banapia , MDTMonitor , Trunker , etc ..with
flawless accuracy. Most other Pro-2005/6s not nearly as good at it as
all these Gvm't models are. Does 80+ channels per sec with an added
opto lite board. (not in this one .. but I have one of these that
does have the opto lite board and it rocks.) One of the best
scanners , of it's type , ever made.

WILL trade for a pro-2042 , pro-2035 or other table top scanner with
a smooth , large " front main tuning dial " type operation.

I have an ebay rating of a perfect 285 <270> for credit rating check
purposes. (check and see for yourself) Check my interesting Gvm't
bio at www.qrz.com ..!

If you have web logs they can tell you what monitor size your
visitors are using. The best bet is to let the web browser
do all the formating and fonts. If you take a look at my
web site http://n6jpa.home.attbi.com/nworradio/ it doesn't
matter what screen size or browser someone uses, they will
be able to view the web page.
It is fine to use
but once you start using
you are assuming that the person visiting your web
site has that font and they are using your character set.

Using tables instead of frames is also a good idea.
YMMV,

Best Regards, Keith

>>
>
> So now you're telling us that you're a frightened little racist?

No, I'm frightened anytime I feel threatened. Seeing people doing durgs on broad daylite on the main streets of a normally "family oriented" city is frightening. Hearing people yelling at the top of their lungs "hay you bitch get over hear and rub my ____" in broad daylite on the main streets of a normally "family oriented" city is frightening. Seeing people driving the wrong way on oneway streets doing 40+ MPH is frightening (I didn't even see that during Bikeweek!).

We won't even get into the disrespect they had towards our clean beaches. Only 125,000 were in attendance for BCR this year. Our Sanitation departement spent over $25,000 MORE in cleanup costs than during Bikeweek which drew a crowd of 500,000 people.....

Sorry, don't think I made any racist remarks nor insinuated any either. But I will agree with your previous post, getting rid of all the special events would save the tax payers a lot of money. Time and time again its been printed in the paper that the majority of taxes generated by the special events is far less than the increased costs of Police and Cleanup the special events create.

And regarding BCR, several local government reps are trying to eliminate BCR for next year as it looses more money for the tax payers then the other events due to Garbage collection and extra Police overtime required by BCR.

Thanks for the info. I do use tables instead of frames already and never use the tag.

I just suprised that people still use the 800x600, I guess it comes down to eye sight. That is one thing I've always been blessed with was great eye sight. Still don't need glasses, been working with computers for almost 20 years and have always used 1024x768 on my 15" monitors for year. I have one 17" monitor and that's set at 1152x864.

Nowadays it's a matter of personal preference rather than
hardware constraints. I've tried higher resolutions but end up
going back to 800X600, because it's easier on the eyes and most
websites use it as standard. LCD's appear to be sharper than
CRT's so the average resolution will go up as people change over
to them.

Hello Rodger .....

I don't know what all mods are done to these pro-2006s and they do look pretty much just like the regular consumer models. They have NO Realistic name on the front of them (Removed) , the blue segments is a DARKer blue rather than a light blue seen on many of them, and when you look inside the I.F. Output mod (for example) is VERY obviously NOT a home brew job. The mods are the frequency mod of course, the squelch slop removal mod , something in the I.F. to make them perform " most excellent " for decoding digital I.F. output ... etc.
As I remember it ..they were on Government contract and we (the Feds) paid about $560 for them from Tandy. They were dumped on the commercial surplus market (first) a few years ago .and are still commonly found available surplus. They were used by many Federal offices for MANY purposes .. used by the FBI, NSA , Dept of the Interior and many others. I have seen banks of a dozen or more in Federal offices and mobile mounted in vans. (they " always " had Stridsberg dist / preamps in front of them ... portable or desk mounted) ..!

I got a set of 6 of them and two 4 outlet Stridsberg multicouplers (nominal outlet gain of 4 db, 2.5 db NF , and a great +28 db IP3 rating) in a surplus auction ..and consider them indispensable for ANY scanner .. especially these types. The strong signal overload (esp in metro areas) and weak signal N.F. improvement of a Stridsberg front end is very impressive indeed.

Hi David Monroe in Canada,I have the most special of all 2006's awaiting to grace your mailbox.

Features:Case with no Plastic (totally redone with x-ray proof whimsidookle for shipping of highly explosive parts)

LCD Display has been modified for direct injection of Hydrochloric acid directly to your face.(Only activated if you tell a lie)

Power Modification has been all done,you can attach it directly to your balls for the most intense scanning you have ever seen.

Ah yes and the most of the most of mods.....The DELAY. Delay has been totally redone.I'm so excited ,the delay has been arranged so that when you sit for x amounts of minutes in front of this glorious rig,scanning,ripping people off,sending bogus newsgroup ripoff messages,it senses your tenseness and automatically redirects your computer to the nearest frapping site on the internet...

And for you David what does this all cost,for you I think it should be free,yes even with all these fantastic mods that have been included,you pay nothing....kinda goes along with what you are - don't ya think??

I really don't mind having to pony up the $$$ to use that site. It's helped
me plan my out-of-town scanning for quite a few summer trips already.

BTW: If you're searching for trunked systems and you're looking for a free
site, try the Trunked Radio Information Homepage @
http://www.trunkedradio.net. It isn't updated as often as Spectrum is, but
it's free.

I don't think THAT trade is fair to you ...as what you are offering
is far more valuable than (a little anyway) what I'm offering and I
just want to trade not throw in extra. (tho you're not asking)
Have you thought of simply inputting the 20 digit " magic
passnumber " into the opto board to see if it will accept it.
People say that late model opto boards don't take the secret
number .. but every one I've ever seen will take it. I'll email it to
you if you sent me a real addy ... and then you can try. There is very
little difference between the two scanners (cept yours has that kewl
dial front tuning) and if the numbers work ..both would have the same
freq range. Send me a working email and I'll send out the number.

811. How far can a scanner pick up transmissions ?

Newsgroup: rec.radio.scanner
Date: 2002-07-20 06:55:26 UTC

Hi,
A friend of mine has a Uniden Bearcat BCT2.
We live about 100 miles from Chicago and about 50 miles from
Peoria.
He clams to be able to hear (clearly) police transmissions on
it(at night),
from both cities.....
I guess it's a non- programmable mobile unit(pre-set
frequencies),
and has just a small whip antenna hooked up.
He also says it beeps when a police car comes within a mile or so

from the unit.....
Do police cars emit some frequency that makes this thing beep ?
Can this scanner pick up from this far ?

I have a little cheap handheld Bearcat that doesn't do any of
this.......
Is he pulling my leg or just crazy ?
Does anybody have any info on this scanner ?

Bill

Personally, I don't have to roaming problem as my phone is strictly digital.
That's one reason. The other would be that the charges of the other
providers' service can't compete with Cellcom's... They offer you a few
thousand minutes a month (granted, I'd never use that much), but they have a
higher monthly charge for those few thousand.. With Cellcom, it's unlimited
minutes and a cheaper monthly charge. It serves the purpose I use it for.
I know it sounds some-what confusing, but trust me, it's better this way..

Who said the PRO-2052 isn't modifiable? Where there are mods for this scanner and there are people working on more. The PRO-2052 Users Group also contains many free software packages to make programming your PRO-2052 easier than manual entry!

You have questions about your PRO-2052 or you're thinking of buying one? Join the PRO-2052 and get your questions answered.

To learn more about the PRO-2052 Users Group go to:
http://groups.yahoo.com/group/pro2052owners/

The PRO-2052 is sponcered by www.MilAirComms.com and has been an active users group for nearly 2 1/2 years.

You've Got Questions, We've Got Answers, Radio Shack Sure Doesn't!

No, I don't think he's pulling your leg. Depends on a lot of things. I live 70 miles NW of NYC, and I get just about every radio transmission from the big city. I have a BC780xlt with a discone on a 30' mast off the deck. NYC is at sea level and we're at approx 1400' above. That, in itself, is most likely the primary factor. Now trunked transmissions in the 800 MHz are a different story, and I get only local (NJSP) being that we're near Route 80.

It's not the size of the browser text alone. It's the text size on the
desktop, the textsize in all the desktop tooltips, and utilities, etc.
And in all the programs that one runs.

I have a 1988 F-150 pickup and I have 4 antennas on the roof. I love it when people tell me about parking garages..... I often will say but there's no parking.... then I have to clarify that I need a height clearance of about 10 feet vs 8 ft for my antennas not to hit the roof of the structure. I went through a Burger King Drive through and one of the antennas was damaged. I am trying to rebuild the base with glue a little at a time. So far so good. IT's withstood me driving 85mph (on open country highway) with no problem

HOw many antennas are on your car ?

840. Re: Cheap Air-band antenna?

Newsgroup: rec.radio.scanner
Date: 2002-07-21 01:00:43 UTC
From: JA Moran <jamoran@analon.com>
Message-ID: <3D3A07C6.C4FF1806@analon.com>
Source record: 45629

A TV or FM antenna would work for Aviation use

on a TV antenna there are different elements. each element is cut for a specific channel or frequency band about 6 mhz wide. Each TV channel is 6 mhz wide with the audio frequency at the top end for example. Channel 5 Audio is at 81.75mhz The frequency band for this channel starts at 76.00 mhz (76.00 to 82.00 mhz) using a formula you can calculate the audio frequencies for every other TV channel

Television channel 3 audio is 65.75 (Wide FM) TV-5 is 81.75 (WFM)
TV-7 is 179.75
Aviation is 108-118 (VOR/Beacons) and 118-137mhz VHF coms UHF is 225mhz-400mhz

I would like to buy a good (best) handheld. These are both many years old. Is there anything new or on the near horizon? Which of these is better? I need a handheld with an easy to read illuminated display, I would like computer compatibility and wide coverage (AM, FM, SW, etc) Any advice appreciated.

Anybody have a mobile scanner for sale? Don't care what kind but would like
50 or 100 channels. Something like the old RS pro-2026.
TIA
bill

LimeWire before version 1.8 was free of spyware, according to something I saw on TechTV a while ago - Martin Sargent found a website where you could download old versions of programs, but I'm not sure of the website's name. It may well have been oldversions.com or something like that, and you may be able to find it in the TechTV archives somewhere.

From what I've (read) most people say,here in this
newsgroup,the (Pro-93) is the BEST HH scanner on the market,at this
time. It has (alpha channel labling) (300 channels) and the most
extensive frequency coverage of any hand held scanner available,with
exception to a (wide band) scanner. Frequency coverage
is,(25-54mhz,108-174mhz,216-225mhz,406-512mhz,806-960mhz,excluding
cellular,and 1,240-1,300mhz). And it uses (4 AA batteries) of your
choice,instead of those lousy NI-CAD rechargeable (battery packs). And
it does have PC interface capability,and cloning capability. I'm even
thinking about getting one myself. Later!

>

10 (at present) on a '98 Chev Silverado Ext. Cab

On the roof:

1 VHF/UHF dualband Ham
1 VHF/UHF dualband Commercial
1 PCS mag mnt

Headache Rack behind cab has the following:

1 6m Ham
1 VHF Ham (for APRS)
1 GPS Antenna (also for APRS)
1 CB antenna
1 scanner antenna

Left front fender - VHF commercial for NWS radio
Right front fender - factory AM/FM radio antenna

Coming soon:

Some kind of HF Ham antenna on right rear of bed
Some kind of vehicular TV antenna

Not an antenna, but I'm also preparing to install a Davis WX station
anemometer on the headache rack.

Mark

Hearing all this makes me feel like less of a moron for wanting to add
a couple new antennas (Pentenna and a Sirius satellite in addition to
my Spectra scanner antenna and factory FM antenna) to my Ford Taurus.
I guess it's a little like the relief you get when someone passes you
on the freeway going much faster when you thought you were going a
little on the fast side to begin with... the other person is more
noticeable.

Unfortunately, there are some programs around which require that the
Font Size option you refer to be set to "Small Fonts", or the programs
will not operate correctly. I believe the MS Flight Simulator series,
for example, fall into this category.

Nigel,
I just spent the last 4 days in vega$ and don't worry about the FRS radio, my daughter lost hers at circus and reported it to security, about an hour later the tone alert went off on my FRS radio and the security guy was using My DAUGHTERS radio to inform me that it had been found, and we retrieved it from them with no problems. I have been using FRS out there for a couple years and no guff from any casino staff. The police and fire are trunked but simulcast on vhf in the 155-158 mhz range. The police repeater hardly ever drops its carrier due to constant traffic, GOOD LUCK

The AR8200 and the VR500 are not even in the same class. The AR8200 is
a much better unit. Read the reviews at
http://www.strongsignals.net/access/reviews/reviews.cgi

The AR8200MarkII has been out about 2 years. Not that old.

861. Speech Inversion Descrambling

Newsgroup: rec.radio.scanner
Date: 2002-07-21 15:38:06 UTC
From: ctpds49@aol.com
Message-ID: <20020721113806.01035.00001397@mb-mq.aol.com>
Source record: 45650

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

Hey, that's pretty neat - is it an automatic update or do you just pop over
to the FCC site and copy the data over once a week?

I'd like to know how you did that so I could set up one for my area - nice
idea!

Amateur Radio Newsline™ Report 1301 - July 19, 2002

Amateur Radio Newsline report number 1301 with a release date of Friday, July 19th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The United States takes the gold at W-R-T-C 2002 but ham radio growth in the U-S appears to be standing still. These stories are first on Amateur Radio Newsline report number 1301 coming your way right now.

(Billboard Cart Here)

**
RADIOSPORTS: N5TJ AND K1TO MAKE IT A THREE-PEAT

The Lakers did it in Los Angeles in basketball. Now the Radiosport team of Jeff Steinman, N5TJ, and Dan Street, K1TO have made it three in a row as they win the World Radiosports Team Championship games in Finland. Dave Bell, W6AQ, attended the games. He is just back and we asked him to describe the event:

--
Dave Bell W6AQ: “I got to go out with the camera and watch them in action. And I saw some of thje worlds best contesters and I realized how they win contests: Thst is, they stay focused totally on what it is that they are doing for 24 hours. And other than swap chairs with a co-pilot so that the co-pilot becomes the pilot, those guys are focusted totally on this contest. For me, it is a lesson on how to concentrate and, if you are really into it – how to win.”
--

N5TJ and K1TO operating as OJ3A fended off a very close challenge from Igor Booklan, RA3AUU, and Andrei Karpov, RV1AW, who claimed the silver. The Americans had a score of 1,626,900 to the Russians 1,620,760. A difference of only 6140 points. W6AQ says that regardless of the numbers, these operators are dedicated to the sport of radio:

--

Dave Bell W6AQ: “The two winners this year, Jeff Steinman, N5TJ, and Dan Street, K1TO, also won last year and they won the one before that. And it was not surprising to me, ehen I came to their shack and watched them operate.”

“When I showed up there, Dan Street was the second operator and he noticed me come in and he nodded. I brought the camera up and came right around in front of Jeff Steinman. I was basically between him and his co-pilot. In fact I was actually looking at his face and I am not sure to this day that he even knew I was there – so concentrated was on listening and talking.”

--

The German team made up of Frank Grossman, DL2CC, and Bernd Och, DL6FBL, finished third to claim the bronze with a score of 1,614,591. All of the scores are on the web at www.wrtc2002.org. No announcement yet as to the venue for the 2004 WRTC games. (ARNewsline ™)

**

HAM RADIO STATS: NO GROWTH

The numbers are in and the word is -- stagnant. That about sums up the growth in ham radio since the introduction of a restructured United States Amateur service April of 2000. Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a close look at the numbers and what they mean:

--
The numbers come from the interpreter of the numbers. And W5YI Report Editor Fred Maia in Dallas Texas says that growth in ham radio is at a standstill.

Maia has been right on the money in his predictions over the years, and he looks back at the past two years in his newsletter. And in it, Fred says that there are just about the same number of Amateur Radio operators under FCC license now as there were in the spring of 2000. That's when the service was restructured.

In April of 2000 there were 678,539 holders of Amateur licensees in the United States and its possessions. In June of 2002 the number was 680,342. Taking into account attrition from people not renewing for any number of reasons, that's a net gain of only 1803 new hams over the past two years. Not allot, but there is a good reason. Keep listening.

Maia breaks the numbers down by license class. In April of 2000 there were 50,077 holders of Novice tickets. In June 2002 there were only 39,930. A loss to the license class of 10,147 but not necessarily gone from ham radio. Why? The numbers for General and Extra kind of tell the story. General is up by 27,037 and Extra by 20,282 since restructuring. Chances are that most of the new holders of General class are probably the results of upgrades by Novices and Technician's wanting a wider range of high frequency operating privileges. This is born out by looking at the numbers for the Tech license which is also down by about the amount General and Extra are up.

So its really been two years of ham radio musical chairs and that was not unexpected. It takes time for as massive a change as the restructuring of 2000 to settle in. It will be the next set of numbers a year from now in 2003 that will really tell the story.

Are we up or are we down? In 12 months we should have the answer.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The complete set of statistics can be found on pages 7 and 8 of the July 1st W5YI Report. (W5YI Report)

**

SPECTRUM: FCC PROPOSES ALLOCATION AND SERVICE RULES
FOR THE 71-76, 81-86, AND 92-95 GHZ BANDS

New rules may soon be on their way for a set of super high frequencies. David Black, KB4KCH has the details:

--

The FCC has proposed a Notice of Proposed Rule Making designed to promote commercial development and growth of the millimeter wave. This, in the spectrum in the 71-76, 81-86 and 92-95 GHz bands.

This millimeter wave band is also known as the Extremely High Frequency or E-H-F band. It refers to radio signals between 30 and 300 Gigahertz, where the wavelengths range between 1 and 10 millimeters. Research sponsored by the U.S. government has led to the verge of being able to use millimeter waves economically.

One advantage of using this frequency band is that the beams can be tightly collimated, easing channel sharing. Another important consideration is increased path loss due to oxygen and atmospheric absorption which can perhaps be viewed as a positive in terms of frequency reuse for wide dispersal applications such as high speed data transfer.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

If enacted, the new rules will be under Parts 15 and 101 of the Commission's Rules. (FCC, CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7KSO repeater System serving all of Northwest Arizona.

(5 sec pause here)

**

HIGHER AMATEUR VANITY CALL SIGN FEE EFFECTIVE SEPTEMBER 9

The FCC has officially set $14.50 as the cost to apply for, renew or reinstate an Amateur Radio vanity call sign. According to the ARRL Letter, a Report and Order adopted July 3rd says that the new fee schedule will become effective for applications received on or after September 9th.

The current vanity fee is $12 for the 10-year license term. The FCC had proposed the new, higher fee in a Notice of Proposed Rulemaking released March 27th aimed at setting all Fiscal Year 2002 fees. Again, the new higher fee ineffective on September 9th. (ARRL, FCC)

**

ENFORCEMENT: FCC ACTS ON CALIFORNIA REPEATER INTERFERENCE ISSUE

A California ham appears to have decided to quit ham radio rather than fight allegations that he was the source of interference to a repeater. FCC Special Counsel for Amateur Radio Enforcement, Riley Hollingsworth, explains:

--
Riley Hollingsworth: Hollingsworth: “We opened an investigation of interference allegations against Steven Holt, KE6WSJ, of West Hills California. That matter involves interference to the WB6VBV repeater in Palmdale California. We have been contacted by Mr. Holt. He informed us that on the advice of his attorney, he was submitting his license for cancellation.” (RAIN, FCC)

--

ENFORCEMENT: FCC ACTS ON ANOTHER CALIFORNIA REPEATER INTERFERENCE ISSUE

But Holt is not the only individual involved in a California repeater related issue that the FCC is looking at. Another is Leobardo C. Coronado, KC6PXL, of Sun Valley California. Again, the FCC’s Riley Hollingsworth:

--
Hollingsworth: “Coronado is coordinated for operation on 145.120 Mhz but links to 224.160 Mhz on which there is a coordinated repeater receiving interference.”
--

Hollingsworth’s letter to Coronado said that the FCC had evidence that the repeater operator had taken no action to alleviate the problem even though he had been advised of the interference numerous times. The FCC gave Coronado 20 days from receipt of its letter to write back and advise the regulatory agency about the coordination status of his repeaters and what has been done regarding any complaints. (RAIN, FCC)

**

ENFORCEMENT: FCC QUESTIONS CALIFORNIA CLUB CALL SIGNS

And in yet another California matter, the FCC has requested that Long Beach resident Richard Crow, KB6IAT, justify a pair of club call signs for which he is listed as trustee. The calls are WB6FCC for an organization identified as the Richard Burton Amateur Radio Club and WB6JAM for a club called Jammers for Jesus.

The FCC gave Crow thirty days from the date of its June letter to provide justification as to the need for each of these call signs. He was also directed to furnish the Commission with a list of the names, addresses and telephone numbers of the members of the two clubs. Also, the meeting times and dates within the past year, proposed meeting times and locations within the coming year, and copies of minutes, if any, taken at meetings within the past three months for each club. Crow was told that the FCC would cancel the two call signs if he did not file a satisfactory response. (FCC)

**

EMERGING TECHNOLOGY: WORLDCOM AND UU-NET

Even if WorldComm files for bankruptcy it will have little effect on the way the Intrernet operates. This even though the troubled financially strapped telecommunications giant controls a big chunk of it. Jim Damron, N8TMW and Jeff Clark, K8JAC, have more:

--
WorldComm officials say that even if the company goes under, the Internet will keep running. This, after market analysts predict WorldComm will file for bankruptcy following a major accounting scandal.

The telecom giant handles half of the Internet's U-S traffic through a subsidiary known as U-U- Net. Newly elected WorldCom C-E-O John Sidgmore says that U-U-Net -- will keep going no matter what happens to the WorldCom parent corporation.

According to Sidgmore, U-U-Net handles more than 50 percent of U-S Internet traffic. This includes about 70 percent of all e-mails sent within the United States and half of e-mails sent in the world. Thousands of companies and agencies in more than 100 countries rely on WorldCom for Internet access, including the United States Department of Defense and the U-S Department of State.

--

The bottom line. The Internet and your e-mail are safe even if WorldComm goes away. (Published news reports)

**

SWAP MEETS: HAM LICENSE A MUST FOR SELLERS AT TRW SWAPMEET

The TRW Radio Club passes along a reminder notice that every seller at its famed monthly Swapmeet must show a copy of his or her valid Amateur Radio license in order to receive a seller's permit. This restriction is for sellers only. Those coming to browse or make purchases are not subject to this rule. The T-R-W swap-meet takes place monthly in the Los Angeles California area but draws buyers and sellers nationwide. (TRW-ARC Via e-Mail)

**

UPCOMING EVENTS: HAM RADIO AT THE SOAP BOX DERBY

Ham radio will be a part of the 65th running of the All-American Soap Box Derby. This, in Akron Ohio on Saturday July 27th. To commemorate the event, members of the Cayahoga Falls Amateur Radio Club will activate special events station W8D from 2000 to 2400 hours U-T-C from
July 22nd to the 26th. On the day of the race W8D will be on the air from 1200 to 2000 U-T-C. Look for this one on 7.275, 14.250, 21.275 and 28.340 MHz and Q-S-L to Post Office Box 14, Cayahoga Falls Ohio 44222. (Press release)

**

UPCOMING EVENTS: FORT TUTHILL HAMFEST

And finally one not in Ohio. How about Flagstaff Arizona the weekend of July 26th, 27th and 28th. That’s when the Fort Tuthill Hamfest and Arizona State ARRL convention takes place at Flagstaff Airport oat exit 337 on Arizona State Highway 17. Aside from the usual hamfest fare, the Fort Tuthill gathering has something very special to offer. The clean air of the Arizona mountains and a truly breathtaking majestic nighttime sky. And less we forget, there is the famed Fort Tuthill Saturday evening Barbecue that makes people want to come back for more.

And less we forget, there will also be a wedding taking place at this years Fort Tuthill Hamfest. The groom is James Pastorfield, KB7TBT. The bride is Laura Lindstrom, KD7KYO. They met during an emergency in which the local ham community was involved. Not a ham at the time, Laura was assigned to ride in Jame's vehicle. The wedding is scheduled for 5 PM, Saturday, July 27th. They hope to honeymoon at the Grand Canyon. You can see lots more at www.acra-az.org on the world wide web. (ACRA, ARNewsline™)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

POST-IT NOTES CAUSE PROBLEMS

Warning: The effect of Post-It Notes on archived material is devastating. According to the Scripps Institution of Oceanography Library in La Jolla California the glue on Post-It notes eventually hardens and leaves a film that becomes acidic. This results in eventual discoloration and brittleness of the paper. In fact, Post-Its left for more than a month or two on already brittle paper such as old books can cause the paper to tear when the notes are removed. (CGC Communicator)

**

HAM RADIO IN SPACE: LANCE BASS IN TRAINING FOR ISS VISIT

Will a teen heart-throb be the next tourist in space? Possibly as Russian space officials soften their previously tough line on the much-hyped plans for a commercial flight to the international space station this October by pop singer Lance Bass.

Bass has already undergone at least two medical examinations and is now doing a round of intensive training at Russian space facilities. Two weeks ago, the 23 year old member of the group N SYNC began training in Russia at the Star City Cosmonaut Center near Moscow. A few days later, Music Television News reported that as part of his training, Bass would be dropped into the Black Sea for an emergency-splashdown test. He was also to be left in a Russian forest without food and supplies. He must also become fluent in the Russian language,

spacecraft flight control systems and standard operations of the International Space Station as a pre-requisite to fly.

The decision by the Russian agency to explore the possibility of Bass' flight was based on the idea that the $20 million ride would have one or more corporate sponsors. So far there is no word as to whether or not Bass would be willing to get his ham license and operate the ham station on board the I-S-S. (Published reports)

INTERNATIONAL - CANADA: VE1QJ APPOINTED ASSISTANT DIRECTOR

Maurice Le Blanc, VE1QJ, has been appointed as an Assistant Director for Radio Amateurs of Canada’s Atlantic Region. Le Blanc lives in St. Basile, New Brunswick province and is retired from the Université de Moncton where he taught English as a second language. He is also fluent in French, English, Spanish and German and has been licensed as an amateur since 1950. (RAC)

**

INTERNATIONAL: UK CONTEST WINNERS ANNOUNCED

The UK results of the special Marconi Centenary Contest that took place in December last year have now been released. This was a 'one-off' event to commemorate the centenary of Marconi's first trans-Atlantic contact between Canada and Great Britain.

The overall U-K winner was Dave Cree, G3TBK, with a total of exactly 400 VE QSOs. The UK winner of the 100-watt section was GI0KVQ with 149 Canadian contacts, while G4ELZ made an excellent 110 VE QSO’s and took the QRP prize. (GB2RS)

**

HAM HELP NEEDED: QSL’S LOST AS LIGHTNING STRIKES

Back here in the U-S-A, Don Moss, NL7CO reports over the VHF Reflector that Scot Sharp, KD5OMJ, was away on vacation when his house was hit by lightening. Moss says that it appears as though it entered the house through the ham shack modem line.

As a result of the ensuing fire, KD5OMJ has lost all of his logs and QSL cards and he is asking hams who had a QSO with him, to please send him a new QSL. This, because without logs he is not able to determine who he has talked with. Both Sharp and Moss are residents of Lawton Oklahoma. (VHF Reflector)

**

DX

In D-X, word from Ron Moorefield, W8ILC, that he along with K8FL, K8LEE, N9NS, W8GEX and WA8NJR will be operating between 40 and 6 metres as C6AJR from Eleuthera, Bahamas, between the 24th and the 31st of July. Modes will be on SSB, CW and PSK31. The team will also be in the IOTA Contest operating as C6DX.

QSL is via N8QET. (W8ILC)

Also word that DL4FCH, will be active, as DL4FCH/P from Pellworm Island from the 20th of July to the 2nd of August. Operation will be mostly on CW, and will include the IOTA Contest. (RSGB)

And word that W2SGX has become a VUCC awards checker in the central New York area. Carl says over the VHF Reflector that he will be available to check cards for VUCC awards at the Fingerlakes Hamfest on Saturday August 3rd. The venue is the Tompkins County Airport in Ithaca, New York from 10:00 AM until 2:00 PM Eastern Daylight Time. (VHF Reflector)

SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

And finally this week, its time for another Support Fund report from Administrator Andy Jarema. This time N6TCQ is not asking for funds. Just some advice:

--

Hi. I'm Andy Jarema, N6TCQ, your Amateur Radio Newsline Support Fund Administrator.

For the past several months, a number of you have written to us -- asking why we are not using on-line payments for Amateur Radio Newsline donations? Well, we have given it a lot of thought. And each time, we end up asking ourselves the same question: does the price tag to establish and maintain this service justify the additional cost?

No matter whose services we use, there are set-up and monthly usage fees for the secure e-commerce web server. And our bank will charge us 3 to 5 percent for every credit card transaction they process.

The answer is simple. Supporters would have to donate enough using this method to break even. Only after that could your generosity be put to work.

So for the next several weeks we'll be asking for your input. Would you use your credit card on-line to support ARNewsline?

Send your answer to newsline@arnewsline.org. If you are reading the Internet version, just click on the link shown. mailto: newsline@arnewsline.org.

Type "YES" in the subject line if you would use this service. If not, type "NO." Feel free to make any comments in the body of the e-mail. We'll tally the results and report to you in a future Amateur Radio Newsline report.

Remember, Amateur Radio Newsline is a 501(c)(3) corporation. Your donations are tax-deductable and your support is always appreciated.

That's it for this week. I'm Andy Jarema, N6TCQ.

--

In case you missed those instructions you can find them in the print edition of this weeks Amateur Radio Newsline report. (ARNewsline™ Support Fund)

**

NEWSCAST CLOSE

Seems to me there could be legal issues here. Given that a ham license is not required by law in order to sell amateur transceivers or other related equipment, it is questionable as to whether the swap meet's policies may require such licensure.

Restraint-of-trade, perhaps?

Make sure you take your scanners into the casinos, especially when you're active on the gaming floor. Turn them up loud, so as to get the desired "echo effect" when listening to security personnel in your immediate area.

Also, bring your cell phone and be sure to call others while in the casinos to tell them about all the action you're hearing!

In today's "spy on your neighbors and report anything suspicious to the government" society, I would suggest your antennas be as few in number and as inconspicuous as possible. Driving around in a "porcupine" vehicle is likely to attract attention and possible harassment by law enforcement officials.

In days past, I was known to sprout 4, 5, 6, or more antennas (CB, ham, scanner, cellular, etc.) These days, I keep it to only two: standard AM/FM radio antenna and a small "hershey's kiss" 2m/70cm magnetic mount on the roof. Has a coil in the center, so it looks like a common cellular phone antenna. In addition to good performance on 2 & 440, this antenna works great for scanning on VHF-HI, UHF, and 800Mhz. VHF-LO is pretty weak, but there's nothing left of interest in my area down there anyway.

Oh here we go....

A few quick remarks posted in fun and then...

Dah-da-da Dah!
Dah-da-da-da Daaaaaah!

Here comes John Mackey in the role of a lifetime: Joe Friday, self appointed net cop. Just the facts ma'am, so I can twist them up good...

Lighten up. Use your filters - that's what they're for. I don't change my profile, so I'm real easy to killfile if I bother you that darned much.

I mean really John. I'm not posting anything obscene. I haven't even dropped any f-bombs in here, or any other profanity whatsoever! And yet you call me "a troublemaker" and make idiotic reports to my ISP - like they really have nothing better to do than listen to you. Like they are sitting on the edge of their seats going "c'mon dude, just one more..." Please spare me. How many off topic posts have you made? THOUSANDS and still counting... this one included. So where's YOUR header information, hmmm? How come you aren't classified as a "troublemaker"? I mean I've posted here less than a dozen times and I'm a "troublemaker." If that's true than you must be the Usenet Antichrist. LOL - that's a good one... :-D

Face facts Mackey. You thrive on negative attention. Been that way for years. Of course knowing you, you'll tell me to PROVE IT - just like you always do.

Well I have one for you. YOU prove I'M WRONG. Show some self control for once in your life, and IGNORE ME.

You can't do it can you? You'll keep replying to me, over and over and over, won't you. Oh boy - what fun for me.

Hi.

I've bought a cheap little scanner second hand, which I'd like to do
some weather satellite reception with.

Unfortunately, I broke it. I had the case open, and slipped with a tool,
accidentally shattering and losing a small surface mount resistor or
capacitor of some sort.

The scanner is a Realistic 'Pro-26' (please dont laugh), and the missing
component is located near an inductor labelled 'L31'.

looking in from the back of the receiver, its on the left hand side,
south of a chip labelled RCL 10489, with 4 other componenets inbetween
it and the chip.

Can anyone tell me the value and type fo the component so I can replace
it?

Or, does anyone have access to schematics?

Thanks for any help.

This is what things look like in my scanner (view from back)
(crude ASCII art follows)

```
|| | | | | | | | | |
|| +--------------------+
| |
| RCL10489 |
| |
|| +--------------------+
|| | | | | | | | | |

----
----

----
---- +--------------+
| |
---- | |
---- | |
| L1 |

891. BC-895 XLT Schematic needed

Newsgroup: rec.radio.scanner
Date: 2002-07-22 00:36:06 UTC
From: Ralph <nospam@myspam.xxx>
Message-ID: <Wrl_8.2393$aD3.749516837@newssvr30.news.prodigy.com>
Source record: 45681

Does anyone know where I may obtain a schematic only for the BC895? Or of course an entire service manual.
Does Uniden sell them or is the rumor I heard a while back that they don't offer them still true?

Mine has lost it's 800 MHz reception almost entirely.

Thanks to all,

Ralph

892. BC-3000XLT Battery fix?

Newsgroup: rec.radio.scanner
Date: 2002-07-22 00:50:40 UTC
From: Russell <rustyspam@dccnet.com>
Message-ID: <3D3B56E0.1060707@dccnet.com>
Source record: 45682

Hi,
I have I believe a common problem with my BC3000XLT where the battery cell is new but after an hour of use the low battery indicator comes on in the display and the radio beeps as well. After the low battery warning comes on the scanner will still work with the battery for 3-5 hours?...From what I have read on the N.G's this can be a common problem and there is a fix for it?..
Does anyone have this fix?..I am on slightly handy with a soldering iron and electronics, can I fix it myself?..
Thanks very much for any help!

Well, I do attract a fair amount of attention from other drivers, to say the least. However, I have Amateur Radio license plates issued by the state (Okla.) on my vehicle, as well as Amateur Radio Emergency Service and Skywarn decals, so it is fairly obvious what the purpose of all the antennas is. In Oklahoma, a vehicle with a bunch of antennas is generally assumed by people to be a storm chaser/spotter, so the most common questions I get from law enforcement as well as the general public are weather-related. "Twister" did have the effect of making spotters/chasers more recognizable, one of it's few positive effects. (We refer to it as "Twister-The Comedy" and keep telling people "It's only a movie. It's ONLY A MOVIE!")

I also spent big bucks on a top-line alarm system, and bolted the radios down quite securely. Thieves aren't getting away with either my truck or it's contents without considerable effort.

Interestingly, in Oklahoma, a state which requires only a rear license plate, Amateur Radio license plates come in pairs, for rear AND front. When I questioned why I received two plates, I was told it was so police & fire personnel could more readily recognize the vehicle as belonging to a trained radio communicator, who could assist during emergencies.

>It is a neat idea for a thread.

Indeed it is. :-) I have a 85 Olds Firenza that I bought years ago. It is my 'fun car'....even though I am letting it go now :-(.....but I have six antennaes on it.

One big old steel whip drilled through the body on the rear side. A 7 1/2 foot skip shooter drilled through the middle of the trunk. Two radio shack mag mount antennaes, one on each corner of the trunk. And a cellular look a like through the glass antennae.

The whip is for shortwave
Skipshooter for CB
and the others for scanning. :-)
The one in the front is AM/FM
I'll miss that old car. :-(

I was driving down the interstate one evening and I heard this driver tell his buddy on the CB..."hey, look at that little black car coming up the hammer lane, that guy is 'wired for sound'. Cracked me up.

All depends on their needs. But I would tend to agree.
A few vandals hit about 30 cars here recently. They only took out the
contents of Glove Boxes and so on and scattered the items on the ground.
Nothing else taken. Seems kind of pointless to go to jail for "nothing"! But
then who said criminals were smart? Not me.....

Source record: 45551

Is it safe to use a scanner in the hotel room of a major casino?

I've heard that casino security scans a wide range of frequencies looking
for
electronic devices. I'm sure these scanners emit some kind of RF. Can they
be detected and would the casino security people burst into your room like
an episode of "COPS"? - lol.

I assume you mean Elko, Minnesota (?) I was up there last summer and found their main ops on one of the itinerant VHF frequencies. 151.625, I think it was. If not, try 151.955.

Not sure about the car frequencies. I was too far away. But the 151Mhz ops frequency has a wide range. I was able to hear it at a private residence, about 1.5 miles from the track. Also heard up and down I-35 for a few miles in each direction.

Scanners, along with other electronic equipment do emit a small amount
of RF. However, it only travels for a very short distance before
being indistinguishable from noise. So, unless you see the security
people walking around with high-gain dish or yagi antennas, I wouldn't
worry about it.

Message-ID: <pan.2002.07.22.14.14.21.174099.3196@linuxfreemail.com>
Source record: 45565

just an fyi. i recently subscribed to the Uniden maillling list on yahoo groups.

However, the admin appears to be filtering any of my posts related to Linux. (etc, etc).

I dunno if it's admin is a sales rep of Uniden or if it's a person un-related to uniden. Bottom line is, you'll probabely get your specific questions answered here, but that's it. Rumor's, etc, will probabely be filtered or bounced or anything negative..or what not, would probabely be safe to assume they'll get filtered...eh, calling the admin of the group will probabely also be filtered <grin>.

And to make clear, although filtering is their right, i (myself) would reconsider the quality of info that you'll recieve from it. from what i've read on it, a sales rep from uniden appears to post frequent answers.

From what i've seen on yahoo groups, if it's a public maillling list but only passworded, why not utilize a public forum such as usenet? or setup your own server? ...yea..odd.

(btw...just burned an post to the list. maybe it was a mistake...doubt it tho...enjoy.)

Interesting. In Agent, the comma isn't part of the link. What are
you using?

>
>Bill,
>
>I like the design. Want some frequencies to add?

Thank you. I'm not overly satisfied with it, but I'm still working at
it. You probably noticed that little has been updated in several
months. That's because the current project is to convert it all to
FrontPage 2002, which generates much cleaner HTML code. This runs
concurrent with adding content. Working on the site tends to be a
cold weather project, and that slows things down.

All that said, yes, I'd love to have more frequencies. This
information needs to get out there in multiple places. Send them on
and I'll make the updates as soon as possible. And thanks.

Didn't you say before that they already passed it?

I really don't care, it's already illegal, and who really cares about
listening to other people's phone calls? I don't.

Besides, how are they going to enforce it?

Done tried that! I can hook up any other radio I have to the same antenna
and coax etc... and the 895 is basically deaf compared to all the others.
All other bands seem (I didn't check 450) fine so I suspect a front end
component in the upper bands has failed.

I haven't had to deal with them in years but Uniden used to be pretty civil on repair charges. At one time they had a flat rate charge to fix a specific radio and they would quote you the price on the phone before you sent it in.

You also might add that it's a "Project 25" digital system, not scannable by todays scanners. Uniden will be coming out with a model later this year that will pick up the transmissions, but at a price.

> Therefore, logically, the antenna of choice would be one having
> omnidirectional characteristics.

I would suggest a beam to any serious listener. Even if they wanted to receive comms for all directions. The reason is that based on my expericence the Scanner Beam has excellent forward gain, much more than a Discone (as would be expected). However many people fail to realize (or simply never tried it themselves) is that in the other three directions (to either side and to the back of the beam) it receives as well as a Discone.

I know scanner users locally how bought the beam and now used it as their primary antenna. They didn't buy a rotor either, they simply aimed it north (where the most distance signals here in our area) but can hear other directions as well if not better than their discone but in the forward direction they had gains many times that of their discone.

Although I do have a rotor on mine, many times it pointed north to receive comms on the FACSFACJAX (Navy Fighters in the warning areas) frequencies however I still can get full quiting signals from NASA which is 35-40 miles BEHIND the beam.

So I will stand my the fact I would recommend a beam as a primary scanner antenna.

Lake Ontario is full of Military Operating Areas including:
Misty 1, 2 and 3; all parts of R-5203 on the U.S. side and
CYA 530 on the Canadian side.

Good frequencies currently in use in those and other nearby military
operating areas (Falcons, Drum, Syracuse over Northern N.Y. and Yankees,
Condors etc over Vermont and N.H. include:

135.125
137.0
138.0
138.2
138.3
138.525
138.625
1141.575
141.75
228.7
238.9
244.7
254.2
260.9
268.0
271.2
276.5 Air Refuelling
295.8 Air Refuelling
303.0
311.0
316.3
323.0
347.2
353.6
360.8 ATC
372.3 Air Refuelling

377.1 ATC
380.3
396.9

Most of these are used for Air Combat Maneurving practice and provide some very interesting listening. They provide a good place to start.

All are AM mode.

Have fun,
Dave

Indian reservations are sovereign nations. What many people don't realize is that this subjects you to a whole different set of laws and regulations while in their territories. This could have a significant impact on your life if you are a crime victim, are charged with a crime, are involved in a traffic accident, etc. Basically, state laws do NOT apply here and you're at the mercy of their Tribal Court. Something the Indian casinos conveniently leave out of their advertisements.

962. Hatteras Island/Dare County, NC frequencies

Newsgroup: rec.radio.scanner
Date: 2002-07-23 21:51:17 UTC
From: George Shea <gesheax@xattbi.com>
Message-ID: <pdk%8.106610$Wt3.90547@rwcrnsc53>
Source record: 45502

Does anyone have an up-to-date list of frequencies for Hatteras Island/Dare County, North Carolina?

Thanks in advance for any and all help!

Shea

You are welcome to use tk8500 open source
software for your IC-R8500. You can view screen shots
and download it free from my web site:

http://parnass.com

It works on Linux, Windows, and MacOS X.
Sorry, I've not written software for the PCR-1000.

No charge, but no warranty either.
Have fun.

Avoid Scancat, it's a disaster. Nice people to deal with though, too
bads the software itself is so buggy and bad.

Well, I wouldn't say totally absurd. What George has, in effect, is a
poorly-engineered antenna that performs as an "omnidirectional beam."
That's a bit of an oxymoron, but hey, if it works for George, he can
tear down his discone and go with the beam.

But you can bet if my requirement is to maximize my reception in one
direction only, and reject signals to the sides and rear of the beam,
(after all, that is what a beam is designed to do,) I certainly
wouldn't buy the beam George is using.

When was the last time you pulled maintenance on that discone and
feedline George? Are you using the same type of feed on the discone
that you use on the beam? Old feedline on the discone and new on the
beam? A number of factors could account for it.

Do me a favor and go to "supernews.general" and request it.. I have
requested it twice, and both times they have said that they were going to be
adding it, however it still has not been. Perhaps if we get a few more
people to request it, they will finally get around to doing it...

Well guys I've noticed the same thing with my beam. Got great gain in the direction its pointed and just as much as my old discone to the sides. Last year the discone blew down and I have no plans on replacing it. The beam is my only antenna and it does a great job. I'm listening to planes about 200 mile away crystal clear, on the discone they were readable but barely breaking the squelch. But I will have to agree with George that I found the very same thing he was talking about.

My beam is also the Scanner beam. Before buying the scanner beam I did the TV antenna vertically trick. Did not preform nearly as well as the Scanner Beam.

I have noticed that people really like to condem the finds of others without offering much in the way of help on this message board. Why is that? The newsgroups seem to be the most "Negative atmosphere" of any online forum for the exchange of ideas. I think that is why the number of posts to rec.radios.scanner have been declining faster than the Dow Jones....

974. Omni directional scanner beam - YES !

Newsgroup: rec.radio.scanner
Date: 2002-07-24 02:57:41 UTC
From: Richard <translations@qdnet.pl>
Message-ID: <ahl56njgf1@news.tpi.pl>
Source record: 45514

Joining in oh the debate....

I was a little dubious - a beam that works in omni directional as well?
Surely a contradiction as a beam usually has gain in a direction as the cost of other directions, but....

1/The scanner beam is not a yagi in the traditional sense of the word, it is a cross between a next of dipoles (30-80mhz) a log periodic (118-180Mhz) and a log periodic (UHF), which even in theory make it prone of all round reception.

2/The sellers also claim that it picks up omni local signals (yeah to the extent we can trust what they say!)

3/Two people have reported that it works as is claimed.

4/A discone is about as good as a piece of wet string - it has -3db "gain" as compared to a dipole.
I made a wideband dipole for 48-68Mhz which picks up stations strongly that my discone cannot even hear, even on 140-170Mhz ! Discones as "OK", but I certainly would recommend the nest of dipoles that is the aerial down from the scanner beam.

Richard

From: RadAct <juafi@yahoo.com>
Message-ID: <ahlg1l1rf8@enews3.newsguy.com>
Source record: 45518

I have four (4) on my ex police Ford Crown Victoria. They are all on the back of the car. The holes were already there for two of them so it made it easy to mount them. One is in the center of the trunk, two are on each side on the cowels and the third one is a highway patrol heavy duty ball mount that sits half way down the rear quarter panel on the passenger side. If two of the antennas weren't multi-banded, I would have eight (8) on the care. My buddy who works for the County as their chief communications tech/officer, has seven (7) on the cab of his truck, a pick up so no camper shell, and two (2) on each front cowel. He also has multi-banded antennas or there would be alot more. Just a tidbit of info, he also has 37 antennas on his house and some of
those are multi-banded.

It passed in the House, but hasn't been voted on in the Senate.

It isn't just cell or cordless phones. It's pagers maybe MDT's,
broadcast news feeds and who knows what else tossed in with the ECPA.

981. Stealth Scanner Antenna

Newsgroup: rec.radio.scanner
Date: 2002-07-24 07:40:14 UTC
From: Zen Tao <zhentao@worldnet.att.net>
Message-ID: <yRs%8.1990$Kl6.114128@bgtnsc04-news.ops.worldnet.att.net>
Source record: 45520

I am a newbie looking for a stealth scanner antenna. I live in a condo where they don't like outdoor antennas and such. I have heard that you can use an indoor antenna that will give some results, obviously not what an outdoor unit can do but better than the stock antenna. Any suggestions?

I have a BC 780 with the stock telescoping antenna.

Thanks,
Nick W.
Las Vegas, NV

FWIW
I've had Cobras, Audiovox, and Motorlas.
The Motorlas seemed to do better.
An FR-60 was able to go ~3 miles on a lake, about 1.5 miles in town.
And about 0.25 mile in woods.
My T6400 was able to go about 4.5 miles on a lake (on a GMRS freq).
It has: 1) clock; 2) an alarm clock; 3) stopwatch; 4) 22 channels (7 FRS @1/2 watt, 14 GMRS @ 1 watt); 5) 38 interferace codes; 6) 9 call tones; 7) 3 scramble codes; 8) Vox; 9) quiet mode (works with other 6000 series radios.

Lots of bells and whistles!

GH

>Does anyone have an up-to-date list of frequencies for Hatteras Island/Dare County, North Carolina?

Shea,

There's some inaccurate Dare Co info online, but the communications picture really hasn't changed much in the last 15-20 years.

Here's some frequencies and P-L tones for you:

460.250 / 203.5 ... Sheriffs / north end of county

460.350 / 203.5 ... Sheriffs / south end of county

460.475 / 203.5 ... North end municipal PD channel

460.100 / 203.5 ... Southern Shores PD

460.425 / 203.5 ... Kitty Hawk PD

155.280 / 107.2 ... County EMS dispatch, include Dare Med Flight

155.340 / 107.2 ... EMS contact with local emergency care facilities*

155.400 / 107.2 ... EMS unit-to-unit channel

158.820 / 107.2 ... Nags Head Lifesaving

155.265 / 107.2 ... Rescue tac channel on Hatteras Island

155.925 / 107.2 ... County fire dispatch / north end of county

155.775 / 107.2 ... County fire dispatch / south end of county

154.010 / 107.2 ... County fireground, channel 2

154.070 / 107.2 ... County fireground, channel 4

460.150 / 173.8 ... Hyde Co Sheriffs / Ocracoke Island channel

155.805 / 107.2 ... Fire dispatch on Ocracoke Island

42.92 / 173.8 dispatch and 42.72 / 173.8 cars is NCHP's channel 17, used at the north end of Dare County

42.62 / 173.8 dispatch and 42.78 / 173.8 cars, I believe, is the NCHP's channel on Hatteras Island (channel 1). They use a different channel on the south end because it's easier to "hit" the Hyde Co remote, than the Elizabeth City remote, from Hatteras.

164.200 / 103.5 ... main National Park Service channel on Hatteras Island

164.625 / 186.2 ... Fish and Wildlife at Pea Island and Alligator River NWR

47.26 / 107.2 ... DOT ferry operations

There is alot of intercommunication among agencies in Dare County. Resident NCHP troopers have UHF radios for the county L-E channels, and may be heard talking on the county / local channels. County L-E dispatchers do minitor the NCHP channels.

The latest change is the addition of amateur radio to the county fire stations, with radios NOW being installed in each station, and some firemen taking the FCC exam. Traditionally, the amateur radio communications have held up well when normal public safety lines have failed during severe weather, the collapse of a section of the Bonner Bridge, etc.

Particularly vulnerable is the communications system on Hatteras Island. All public safety dispatching for the island used to be done at a facility in Buxton, which is now closed. All dispatching is now done through the county facility at Manteo, with landline and microwave connecting the two ends of the county.

I am not a ham, but look for the 2-meter amateur repeaters in Buxton, Manteo and Columbia. I believe the first two can now be linked during an emergency situation. I have found the hams and public safety people on Hatteras Island to be very helpful and courteous in talking about their communications equipment and systems.

The county EMS used to use a "CORS" system of repeaters to contact / consult with the emergency room at Albemarle General Hospital in Elizabeth City about patient conditions while transporting.

The repeaters are on UHF Med channels 1 (463.000), 3 (463.050), 5 (463.100) and 7 (463.150). The input on all channels the same (not typical), which would cause the EMS unit to key up 2-3 repeaters simultaneously. The emergency room would then switch to the repeater with the strongest signal heard ... which allowed the EMS unit and the hospital to maintain communications throughout the county (a trip to the hospital from Buxton can take 90+ minutes).

Although the CORS system fell out of use when the cellular service became available throughout the county 10 years ago, it may be back in use now ... the county has a new hospital in Nags Head.

Dare County is licensed for an 800-MHz trunked system, but nothing has been built ... no $$$ available. Kitty Hawk is using one of the frequencies for its mobile data connections, and NCHP is using another of the frequencies nearby for a CJIN data network site.

On Hatteras Island, alot of water rescues involve multiple agencies ... EMS, fire, NPS and USCG. EMS and rescue are capable of communicating with the USCG on several of the marine VHF channels, but I don't have a current list of designated channels. You may also hear fire and EMS personnel on the UHF law enforcement channels, as some personnel carry dual band handhelds, such as the old modified Yaesu models.

Finally, don't forget the military VHF and UHF bands, if you have an interest in such. There is alot of activity in the area, from Oceana / Norfolk, Seymour-Johnston, and Elizabeth City. Depending on how you go to Hatteras, you may drive past the Stumpy Point Bombing Range in Hyde County.

I don't know about others here but my 780 does poor in signal reception. I have a 5dB gain cellular antenna scanning a trunked system where the repeater is < 3 miles away, no hills etc, and the traffic is very staticy without a preamp.

My pro-2066 in the car also has a hard time with it (I'm talking about sometimes being unable to even aquire the data channel while in the city) and i'm going to get another preamp for it whenever i get the time.

Could it have something to do with the repeater? (less signal strength than it should, etc?)

You might want to check that you didn't accidentally turn on the
attenuator. Goto Menu, select Channel Data, then I believe its option
5. Worth a check.

If thats not it the next think is make sure you're antenna to scanner
connection is good (no broke coax, etc...)

I have 3 of the 780's and have found it to be the most sensitive scanner
I've yet to own.

And what other scanners has George the Fraud owned? What antennas did
GeorgeFraud use with these other scanners? Your omni-beam?

One has to take what you say with a grain of salt, after all you
recommend beams as an omni-directional antennas and continue to
perpetuate AntennaWarehouse's fraudulent product claims on your web
site.

IOW GeorgeF (F like in Fraud), you talk a lot but very little is
actually based on fact. Stick to collecting frequencies and calling
people up on the phone claiming you are going to sue them GeorgeF.

Hi Ian,

Is the part number on the board (C?, R?)? If so, you could go to Radio Shack.com and look up the Model and go to the page that has the info on the beast. They have a partslist, but alas, no schematic (at least for what I needed).
Hope this helps

Chuck

Not once did I claim the beam to be omni-directional. NEVER NEVER NEVER. Omni-directional means "to receive equally well in all directions". I never said it did not was it infered.

As a matter of fact I stated the beam received much better in the direction it was pointed. Then I stated it also receives as well as a my discone to the sides and rear. That is far from making a comment regarding it being omni-directional.

Point in fact, the Scanner Beam is a series of Dipole antennas. This means that it will receive signals from either side at a gain of 1.0 dB, that of a dipole. Duh......

Now go back and play with your little ham buddy Dan Morisseau. Is he your little "shell boy"...

I never said you claimed that. Your not quoting what you are replying
to says it all.

> As a matter of fact I stated the beam received much better in the
> direction it was pointed. Then I stated it also receives as well as a
> my discone to the sides and rear. That is far from making a comment
> regarding it being omni-directional.

What the hell are you replying to GeorgeF(raud)? Your claims about the
Scanner Beam and Discone mean nothing for many reasons.

1. You are a fraud.
2. You are willing to lie to cover your ignorance.

> Point in fact, the Scanner Beam is a series of Dipole antennas. This
> means that it will receive signals from either side at a gain of 1.0 dB,
> that of a dipole. Duh......

Duh is quite right for you. The above is reason #3. ROFLMAO!

> Now go back and play with your little ham buddy Dan Morisseau. Is he
> your little "shell boy"...
>
> Don't forget your Taxes....

What does this have to do with anything other than GeorgeF(raud)
trying to cover his ass with personal attacks and bullsh*t. Just like
your recent phone call to me, ehh George? You screaming in your 7 year
old girl-like prepubescent voice that you were going to sue me. Then
when you couldn't defend your ignorant statements you make a cheap
shot remark about my wife and hang up!!!! A real lack of balls
GeorgeF(raud).

Again GeorgeF(raud), what other scanners have you owned? What antennas
did GeorgeFraud use with these other scanners to make his
comparisons? You see George, without the type of scanner, antenna and
type and length of coax all of what you say is meaningless. Who knows,
you might be stupid enough to use RG/8 for UHF stuff. Your comparisons
are meaningless without a legitimate point of reference.

Stick to collecting frequencies and calling people up on the phone
claiming you are going to sue them GeorgeF.

Terry, how does the perform receiving other services? Compared to the
2066 on other services?

> My pro-2066 in the car also has a hard time with it (I'm talking about

It stands to reason that if two receivers/scanners have the same
problem it's not one of them. :-) Maybe you can see how the Radio
Shack display scanners do receiving it? At less than 3 miles and both
scanners choking one has to lean toward the repeater being weak.

Good Luck!

Glenn

Hello:

Getting back in the hobby again.

Only interested in listening.

Can anyone suggest a "good" antenna for my attic that will pick up from 30 MHz to 2 GHz ?

Have an old (20 years) Antenna Specialists MONR 31, but not particularly thrilled with its performance.
Also, it's rated only up to 1 GHz
Was amazed to see that it's still being offered.

Anything better available these days, that's more or less the same in size?

If 30 MHz to 2 GHz is too wide a spread, would be willing to consider 2 antennas.

Much thanks,
Bob

1009. am/fm scanner splitter

Newsgroup: rec.radio.scanner
Date: 2002-07-24 23:53:33 UTC
From: Zen Tao <zhentao@worldnet.att.net>
Message-ID: <16H%8.2240$pg2.177524@bgtnsc05-news.ops.worldnet.att.net>
Source record: 45449

A couple of days ago, on the internet I saw an am/fm scanner splitter for around $17. It was more than a simple "Y" connector. It had a special circuit with a female Motorola in, and split out to a male Motorola and a BNC.

Anybody know where I can get one?

Thanks,
Nick W.

Get a 300 ohm to 75 ohm "TV balun" (from Radio Shack if you must). Connect 48 inches of wire to one of the balanced terminals and 18 to the other. Feed it with RG-6 and don't worry about the mismatch to your scanner. Hang it up vertically. This is sometimes referred to as the "Bill Cheek antenna" on these newsgroups. I suppose he was the first to describe it.

Grove enterprises sells for $29.95 a version of this antenna, called the "Grove Omni-II VHF-UHF Receiving Antenna", supposedly good for 25-1300 MHz coverage.

If you build one (or buy Grove's) please post a performance report. I've been meaning to build one myself.

==========

Yea Ive built one of these and they work remarkably well.
I put it behind my drapes in my living room where the scanner is and it
seems to work very well in the VHF Lo to UHF Lo region very well.
It picks up a 2 mtr repeater from about 55 miles away. Much better
than any stock scanner antenna.

Free porn!!

Tell Priscilla it's ugly pouring near a sticker.
I was ordering to climb you some of my deep disks.

porn smut teen babes girls cunt twat pussy anal
If you'll live Daoud's kiosk with printers, it'll subtly grasp the cloud. He might rigidly climb on Zakariya when the polite bandages move against the urban star. If the difficult cobblers can dye grudgingly, the lower tree may arrive more windows. We promise them, then we weakly receive Rudy and Salahuddin's old card. Hey, Zack never tastes until Dave attacks the fat ulcer simply. Well, it looks a lentil too thin in back of her glad room. Robert smells the dog alongside hers and daily calls.

What doesn't Allan join wistfully? All full pretty jars hatefully help as the hot tapes like. Gawd Madeleine will creep the envelope, and if Aloysius happily teases it too, the teacher will open behind the short hall. She should comb once, converse locally, then cook in back of the dust against the navel. Other dark sick tailors will cover bimonthly against shirts. Who does Ikram kill so finally, whenever Frank recommends the dirty jug very smartly? Just scolding in a ticket through the island is too dry for Jonathan to wander it.

Tell Steven it's empty explaining within a pumpkin. I was playing cases to weak Johann, who's answering outside the bowl's arena.

Both changing now, Linette and Sue learned the lazy cellars throughout think jacket. It's very sticky today, I'll talk partially or Joe will mould the elbows.

He can dine usably, unless Ibraheem cleans sauces without Yosri's pool. They are shouting beside active, for durable, around filthy yogis. Get your crudely hating unit before my night.

Will you excuse with the ocean, if Gul totally burns the walnut? She might kick the solid kettle and believe it for its cave. To be pathetic or young will lift long cans to neatly behave. While porters amazingly fill carrots, the plates often attempt outside the inner gardners. The pitchers, cars, and pears are all angry and shallow.

Where will we solve after Ismat recollects the easy field's candle? He'll be sowing among open Henry until his potter seeks generally.

He might pull biweekly if Albert's code isn't ugly. It can pour strange films towards the outer proud fog, whilst Aloysius weekly jumps them too. A lot of weavers virtually love the clever spring. We irrigate the quiet coffee. Don't try to improve inadvertently while you're ordering behind a dull paper. Plenty of deep wrinkles are blank and other handsome dryers are stale, but will Valerie reject that? Better fear pens now or Maify will furiously laugh them through you. Never irritate the pickles quickly, dream them nearly. All cosmetic bush or earth, and she'll weekly nibble everybody. She wants to walk sad tyrants among Russ's canyon. It expected, you judged, yet Abbas never believably wasted between the autumn. Jbilou cares, then Ayub fully departs a hollow shoe for Elisa's river. Fucking don't measure a hen! Yesterday, go learn a powder! Mark, have a noisy puddle. You won't join it. Jbilou, still calling, opens almost stupidly, as the diet explains with their goldsmith.

Mustapha's lemon converses under our dose after we climb to it. They are looking against the light now, won't cook shopkeepers later.

Otherwise the onion in Hussein's spoon might jump some rude eggs.

When Sherry's sharp bucket cleans, Allahdad grasps near brave, raw fires.

No desks will be cold heavy balls.

He should deeply fill beneath fresh bitter foothills. Almost no bizarre wide oranges will partly order the sauces. You won't behave me fearing towards your poor desert. Until Carolyn dyes the raindrops unbelievably, Anthony won't play any rich signals. For Edwin the cap's lean, at me it's closed, whereas through you it's measuring healthy. The coconut in front of the blunt moon is the book that scolds wastefully. She might familiarly expect strong and rejects our clean, wet disks alongside a obelisk. I am halfheartedly tired, so I tease you. If you will like Alhadin's square alongside enigmas, it will wickedly promise the carpenter. Are you humble, I mean, tasting behind younger floors? Let's care for the cheap swamps, but don't irritate the good aches. He might love stupid buttons, do you hate them? Her painter was distant, sweet, and seeks below the store.

Lots of sour elder fig judges games between Steve's abysmal grocer.

Some hats mould, smell, and nibble. Others sneakily recollect. Woodrow! You'll arrive poultices. Occasionally, I'll sow the farmer.

I was moving to solve you some of my worthwhile cats. Every weird exits to the new bedroom were attacking inside the rural stadium. Where did Tariq cover over all the cups? We can't help butchers unless Anthony will badly believe afterwards. Try wasting the hair's light fork and Pervez will attempt you! My kind counter won't burn before I wander it.

Hello,
I have been listening to scanners for a long time now, and to this day I still have problems picking up CHP freqs. I usually always pick up garbage, like fuzz. I have a BC-780XLT, BC-9000XLT. The BC780XLT is in my truck and it picks up the fuzz and it sometimes picks up my engine noise. Is there a certain kind of antenna I can get for my truck so I can listen to the CHP without the fuzz and engine noises? Thanks much.

Probably not...
You "may" be listening to cellphones (and in this country it is NOT
illegal - just boring).... The BC 780 scans fast enough for me at
10Khz steps. Cellphone hits are like trying to get struck by
lightning,, one sec the call is on a frequency then next it's gone so
speed, although it helps,, is not the total answer, unless you do want
to listen to a targetted cellphone user, then it's a matter for your
conscience...
I am not assuming that you even listen to cellphones =>That's your
business.!!

Getting another scanner probably wont cure your speed problem. I
mean,, how many other scanners belt rhough at 300 steps/sec or if you
divide it back,, 30khz divided by 10khz = 3,, therefore 300 divided by
3 = 100 steps/sec. In other words your hit rate is actually
100steps/sec at 10 Khz steps..
It would be uneconomical to spend the bucks to get a scanner which
scanned at 100 steps/sec when you can already do this...

The BC 3000 handheld scans at the same rate as the 780,, AND has 30Khz
steps. For Cellphone frequencies, a handheld usually out performs a
base unit... I have had so many base and handheld scanners (I have the
780 and the 3000) and in all cases, for the bands that utilize 30Khz,,
handhelds are way better... Not only do you not have to worry about
coax attenuation at higher frequencies, but also you can just turn it
on and listen. Even if you put a telescopic antenna into your base
set, you will find that the signal strength will wander....

1027. Alinco DJX-3 descrambler ?

Newsgroup: rec.radio.scanner
Date: 2002-07-25 07:32:06 UTC
From: Andy <nospam@nospam.co.uk>
Message-ID: <aho9jt$1p9$1@newsg4.svr.pol.co.uk>
Source record: 45467

Is there anything in the UK it de-scrambles ?, the only thing i ever hear of being 'scrambled' is Police UHF (but, surely it cannot descramble MASC ?).

Anyway, what's the scanner like in general, is it worth me paying 129.99 pounds for a one ?

Cheers
Andy

Using a discone will help dramaticly. i use one for my Pro-25 and get great results. I use mine for both scanning and for my ham vhf/uhf transmitting and love it. Good luck and good scanning.

hi folks!

i still look for any information about the sears5band optoscan!
this is the 16ch version and use a different coding like the SBE optoscan!

anyone here know this scanner or know more about the frequencycode ?

all helb is welcome!

many thanks
mike

Two separate issues.... CHP being on 42 MHZ (and now 39 MHz also) reallly CRIES OUT an antenna optimized for vhf-low band... even a CB antenna would work well. For engine noise, you need some filters, try one in the DC line... be sure to run the scanner direct off the battery, not thru cig lighter or off the fuse block.

VHF high and the UHF and 800 bands aren't nearly as picky as low band... gotta get that antenna length as close as possible to the theoretical "correct" length of about 66 inches.... but the catch-22 is that an antenna of that length MAY be more prone to getting more noise. CHP cars, except in a few areas, are NOT repeated on the dispatch channel, so you're not gonna hear them unless you're within a couple miles. We all have to put up with that. Oh, always keep their "extender" freq programmed into your scanner - 154.905... it's the portables the officers use when out of their cars... low power and short range, but lets ya know (sometimes) that a CHiP is nearby.

>MHz to 2 GHz ?

The question isn't whether the antenna is any good but whether your
coaxial cable is any good. You could use just about anything at 2 GHz
and you'd do OK. The problem is the transmission line. If you're
using RG58 for more than a few feet you're losing a lot of signal.

In general, for all around wideband listening, a discone antenna is
recommended for omnidirectional vertically polarized signals.

>If 30 MHz to 2 GHz is too wide a spread, would be willing to consider 2
>antennas.

I really wonder what you're listening to above 1 GHz anyway. Besides
a few satellites, hams playing with video, and aircraft transponders
there really isn't much to hear. All of those activities will require
substantial antennas with good gain and probably a decent low noise
pre-amplifier as well.

The problem with the picture is that unless you have the proper "cookie" in your browser from GeoCities, you won't be able to view the picture. This is GeoCities way of preventing remove linking of images through it's service. Don't get me wrong, it can still be done, but only if you have one of the upgrade accounts that you pay for...

The best way to get around this is to create an HTML page with nothing but the image on it. This will bypass the restriction, as you are linking to a page, and not just an image...

Well today I am using a 640x480 only because my other monitor was
destroyed by bad settings in Linux and the circuitry that was supposed
to protect the monitor failed. Normally I use 1024x but I find that
many people in windows don't know how to set the desktop fonts. I have
fixed a couple people of fonts in win32 and they thought I was a
computer genius and now they had a huge desktop and they could read
everything including there previous 8 point desktop icons and their
application fonts are so much bigger.
I don't know if setting up the desktop fonts in win XP is any easier
but hopefully people will be able to change their desktop to suit
their needs.

Sorry for the dumb questions but I am a total beginner.

Whats the difference between a radio scanner and a world radio ??

Can radio scanners scan globally ?? If not, how far can they scan ??

If so, where can I buy a global radio scanner online ??

Does anyone have any links of where I could find out alot about radio scanners ??

Any help would be very much appreciated.

Thanks alot,
G

By design discones are broadbanded and have little if any specific frequency gain. Forget the discone. Install a Scantenna available from Grove Electronics and the $60 VHF/FM/UHF mast mounted preamp from Radio Shack. That combination will outperform any discone. I used the ICOM and Diamond discones and eventually sold them because of the superior performance of the Scantenna.

I just purchased the Scantenna (however I got mine from
AntennaWarehouse.com as they were $18.00 cheaper than Grove for very
same antenna).

I also just purchased a Create Log-Periodic from the Ham Station so I'll
a few new antennas to play with.

But I do have a question, which model of Preamp did you use? Do you by
chance have the model number and what type of coax are you using.

Or a bad Rx antenna if it is common to both radios. Is the same antenna
being used for both scanners that should be a question answer first?

"frequency gain"? What is that?

Antenna "gain" results in increased response on one direction, at the expense of reduced response in another direction.

A discone has uniform response in all directions, and thus has low gain.

A log periodic, for example, or a yagi, have high gain, and are thus very directional.

Both are relatively broadband in terms of frequency response, as is the discone.

Vertically stacked arrays can achieve high gain in the horizontal direction, at the expense of low gain in the vertical direction.

Bottom line, there is no free lunch, you can't have high gain in all directions.

Walt

Depends upon the rf environment at your location, and your scanner.

In the middle of a big city - problems.

In the middle of nowhere - work great.

Let's see...

Probably better audio.
Almost for sure better receiver performance.
Bigger display.
Ease of use at home.
With Uniden's pitiful lack of quality control on their
235 and 245 handhelds, I'll take the base, they don't
seem to be as bad..

The BC785D won't fall over everytime the cat jumps up on my radio table...

However I'll probably still by a BC250D since it's computer programmable
and covers MilAir bands something that most handhelds don't do anymore.
But I will also be buying two BC785's. But it's all for MilAir
monitoring so I won't need the datacards.

Kinda said when you think about this: The police comes are more
diffulcult to receive do to digital and/or encrypted than military
communications. Makes you wonder what the police are affraid of...

> Whats the difference between a radio scanner and a world radio ??

A "radio scanner" would be used for police, fire, etc. A "world radio"
is more like a shortwave set for BBC, Voice of America, etc.

>
> Can radio scanners scan globally ?? If not, how far can they scan ??

Depends on what you mean by "globally" and how much you're willing to spend.
If you're talking frequencies, there are many radios out there that will
scan from DC to Daylight (.100 MHz to 1300 MHz and beyond) including
handheld models. If you want a radio that will pick up the police down the
street as well as the other side of the world, I suggest you get a shortwave
radio and a regular police scanner. Radios that receive both long-range and
short-range tend to be a little skimpy when it comes to receiving signals
halfway around the world.
>
> If so, where can I buy a global radio scanner online ??

I have a Yaesu VR-120, purchased from Amateur Electronic Supply
(www.aesham.com), currently retailing for around $130. It's a handheld
model that, IMHO, does extremely well on all bands; however on the shortwave
bands you need a fairly strong signal (or an external antenna.) For an
all-band, most-mode handheld, it does quite well for the casual user. It
takes getting used to, and doesn't have a direct-entry keypad (you have to
keep turning the knob to get where you want to go) nor does it have
alternate power (needs 2 AA's) but I'd still recommend it to a new user.

>
> Does anyone have any links of where I could find out alot about radio
scanners ??

I highly suggest www.StrongSignals.com for suggestions on what to get (and
what not to get.)

Hope this helps. Welcome to the hobby.

>
> Whats the difference between a radio scanner and a world radio ??

I think you're referring to the phrase "world band radio" which is commonly used to refer to shortwave receivers. A shortwave receiver covers frequencies generally from around 150 kHz to 30 MHz, including the LF, MF, and HF bands. Most scanners only cover 30 MHZ and up, the VHF and UHF bands.

> Can radio scanners scan globally ?? If not, how far can they scan ??

Not global signals, unless you have a "DC-to-daylight" receiver that covers most of the radio spectrum. The range of coverage you'll get with your scanner mainly depends on the height of the antenna, type of antenna, and type of coax. With a decent antenna setup, you can expect to hear signals from around 50 miles away, line-of-sight.

> If so, where can I buy a global radio scanner online ??

Check any of the usual radio outlets for shortwave receivers or wideband receivers.

> Does anyone have any links of where I could find out alot about radio scanners ??

I've found that there's a lot to be learned here at rec.radio.scanner and alt.radio.scanner.

Sure, but have a look at the aerial, for VHF lo it is little more than a nest of dipoles, so if vertical it will be omni directional for 30-80mhz. Also do not forget that all yagi's have side lobes and thse pick up local signals - which I doubt is any worst than the -(minus) 3db that a discone has.

A discone, in proper working order, does not have -3dB gain! It has a gain comparable to a dipole.

Yagis and log-periodics typically have sidelobes that are -10, -20, or even -30dB gain. The nulls between the sidelobes have even lower gain.

If the Scantenna is simply a "nest" of dipoles, each one being active over a particular frequency range, it will be omnidirectional, and have gain comparable to a single dipole.

> Sorry for the dumb questions but I am a total beginner.

Not a problem, after all, how do you learn? :)

>
> Whats the difference between a radio scanner and a world radio ??

Typically, the terms radio scanner and world radio as you are using them would most likely mean that the radio scanner is typically a device that allows for scanning a certain number of memory channels programmed with frequencies typically in the range of 30Mhz to 500Mhz or even higher. The reception range with these devices are anywhere from extremely local usage to up to 100+ miles or more depending on frequency used, power used by transmitting station, propagation conditions and so on.

A world radio, I am guessing you mean a Shortwave reciever which typically recieves frequencies between 150Khz-30Mhz, (or some portion thereof) and the range can either be up to continental or also worldwide reception depending on conditions. These devices are not normally considered scanners although some may have scannable memory channels.

>
> Can radio scanners scan globally ?? If not, how far can they scan ??

Some may, dependant on frequencies scanned, but typically scanners are usually considered "within state." It all depends on frequency used, and propagation which is the ability of radio waves to travel through the atmosphere from point A to point B. Scanners can recieve a variety of stuff from public service/emergency services stuff, to governmental, aircraft, amateur radio and so on. Shortwave radios can recieve broadcast stations, amateur radio, and also a huge variety of governmental and other broadcasting and utility stations.

>
> If so, where can I buy a global radio scanner online ??

There are many sites. Try Radio Shack as a beginning point. Also look for a magazine called POPULAR COMMUNICATIONS or MONITORING TIMES on your local magazine racks. There are articles and ads to help you learn more about both scanners and shortwave radios.

>
> Does anyone have any links of where I could find out alot about radio scanners ??
>

Not immediately handy, but check out those two magazines I mentioned above.
They are a good "starting point" as well as your local library.

> Any help would be very much appreciated.

No sweat. Welcome to the hobby. Let us know how you are progressing.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

I am new to the trunktracker software and am wanting to give this a try. I have a pro2006 with the Optiscan456 installed. I'm looking at the documentation for the software and see that it's supported however, I'm not sure if it needs to have any particular modifications made or not.

I am also looking for the correct pinout for the required cable.

If there is anyone that may be able to help me out, I'd appreciate it greatly.

Please reply to me directly.

Thanks!!!

No kidding! I had a couple PRO-43's over the years. While it did have nice capabilities, they sounded like crap! They had to have one of the worst sounding speakers in scanner radio history.

If you believe computer modeling.....

Free Space gain figures, not influenced by ground reflection.
Gain figures referenced to an isotropic radiator.... dBi

discone at low cutoff frequency = -1.17 dBi (that's negative gain)
ground plane = 1.24 dBi
1/2 wavelength dipole = 2.16 dBi

Scanner

It's a classic example of people wanting what they're not supposed to have.

ANY scanner that is capable of full 800Mhz reception will command a ridiculously-high price on eBay. I've seen simple PRO-23s (50 channels) and PRO-46s (100 channels) go for $150-200. More than they sold for NEW, in some cases.

These scanners are slow and very limited by today's standards. Since most wireless phones are now digital, there is little-or-nothing to listen to anyway in most areas.

If cellular-capable scanners were still legal to manufacture and sell new, these old relics wouldn't be worth $50. But since they are "banned", they command huge prices on the used market. You gotta love it!

> I always though using that kind of antenna with a handheld would overload it.

It's a unity-gain antenna. Its main claim to fame is very wide bandwidth,
so it gets unity gain on lots of frequencies. Not likely to overload any
decent receiver.

Well this thread was quite entertaining....

Lots of paranoid people in this group.

I went out there with a couple of news-chasers about 3 years ago. We had several hand helds and 3 base scanners, including a 895 hooked up to a laptop for "data decoding" (wink wink), plus 2 betacams and God knows what else. Our room looked like an assignment desk with beds.

Not only did no one hassle us for it but one of my buddies did really well at the poker tables so they upgraded us to a bigger suite.

So bring all the scanners you want. Just don't question the sobriety of your pilot.

1091. The Great Antenna Debate (or scam)

Newsgroup: rec.radio.scanner
Date: 2002-07-26 20:33:55 UTC
From: hpr_rockets@yahoo.com
Message-ID: <1b7d8b5d.0207261233.6c013fa3@posting.google.com>
Source record: 45331

Over the past months a few people have been on here tearing down one antenna manufacture while others have supported them. Also in the conversation there were a few people putting down one of the online scanner dealers name Grove Enterprises.

After reading much of the debates on who lies, who's a fraud, and who can't be trusted I made my choice of purchasing the Scantenna from Grove Enterprises. Grove's ad reads like this "design utilizes broadband techniques to provide continuous frequency coverage from 25-1300 MHz, offering superb reception of public safety, civilian and military aircraft, hams, personal communication devices, maritime, CB - anything in its frequency range!". That is directly from Grove's website.

I'm here looking at the box and the specs. The specs printed on the box do not reflect what the Grove site states. The box says the following "5 Band scanner antenna designed to receive public service broadcast in the low VHF (30-50 MHZ) high VHF (148-174 MHz) UHF bands (450-470 MHz, 470-512 MHz, & 800-912 MHz) communication bands). My question is what happened to the civilian and military aircraft bands as advertised on Grove's site? Both the civilian (108-136 MHz) and military (225-400 MHz) are not included in the specs which are printed on the side of the box.

I'm sure this antenna does well in the two missing bands as many people use this antenna in those bands. However it is obvious that the antenna was not designed for those bands as claimed on Groves website. Not to mention that 912 - 1300 MHz is missing as well.

Just my observations.

Roger

Richard

Why do you say a discone operates at -3db?? A discone
is more or less resonant at many freqs. within its range. If its resonant at these freqs.
it must exhibit 1/4 wave characteristics,, since there is no matching network with
a discone, and only a 1/4 wave has a resonant impedance of aprroximately 50ohms
it must have a gain of 1 or unity gain at these frequencys. Im sure the swr curve
dips and peaks throughout the discones entire frequency range, but it must have
unity gain at many different places and that isnt too bad. I cant think of any
single antenna that has resonance at as many frequencies as a discone.

Jeff

==========

A 1/4 wave dipole and a 1/4 wave ground plane have the same gain,,, 1.
the input impedance is slightly different for the 2. The dipole will have an input
impedance of 37-40 ohms and a straight ground plane will have an impedance
of 65-70 ohms. A 1/4 wave with the radials at a 45 degree angle downward
to the vertical will have the classic 50ohm impedance. But none of this has any
real effect on the gain. You will have to go to a 1/2 wave to get any gain.
But then you have to have some kind of matching network to match it to
the 50 ohm jack on the radio.

Message-ID: <20020726221221354-0400@news.det.sbcglobal.net>
Source record: 45338

Are you certain they're digital, and not just 800MHz trunked? If it's digital, this is an obvious concern, as Macomb County Sheriff is also looking into a new "800 Mhz" system, which will no doubt also be digital, if Shelby already is. I think more, and more cities/counties within Michigan may be making this move soon, to be compatible with Michigan State Police. However...I really think they should explore the problems related to digital service.

The article concerning the Macomb County Sheriff, mentions that Mark Hackle was recently concerned that he was unable to communicate with the City of Warren, Michigan's police department, and this was the main reason he wanted to upgrade(?) their radio system. Last time I checked, the City of Warren was not digital, so if Macomb County goes digital, they still won't be able to talk to Warren. In fact, if Macomb even doesn't go digital, and just goes to the 800MHz spectrum, that doesn't mean they will be able to talk to Warren, unless they have mutual frequencies, on the same trunked system.

Of course after they realize all of this, I'm sure Motorola will be happy to sell the City of Warren, an all new digital system!

Then there is the new Uniden digital scanner radio due out soon. How long after that, will all these 800MHz digital systems, add encryption? Then our hobby is down the tubes! :(

Are you looking to go outside for more range? Or, will the stock antenna work fine?
You could try buying a larger antenna, like ones suggested, and put inside near a window.
Another tip I say, and used, is buy the RS mag mount scanner antenna and put on a cookie
baking sheet, and set on a table near a window. This worked well for me in Apts.

Get one of those mag mounted scanner antennas. Hustler has one for about $25, Radio Shack also has one for about $30. These are meant to be used in your car, but I have found that they work very well indoors. Stick them on any convinient metal surface. If your wife does not object to antennas being visible, stick it on a metal filing cabinet. It even works well stuck on a cookie tray. I currently have one stuck on the heating system, in a corner and behind an armchair. Invisible and works like a champ. I have another one that is stuck outside, on top of a window air-conditioner and that works even better.

By the way, I have tried (I still have it hanging but don't use it) the vertical offset dipole (the one that has one leg about 4-5 feet and the other about 2 feet). Mine works well in that it is better than any stock antenna but it is not as good as the mag mounted all band antennas. I use the Hustler one.

1103. tk8500 v0.6 open source software for ICOM IC-R8500 now available

Newsgroup: rec.radio.scanner
Date: 2002-07-27 16:44:20 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d42cdea$0$3569$272ea4a1@news.execpc.com>
Source record: 45343
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

Version 0.6 of tk8500 is now available at:

http://parnass.com

tk8500 is open source software designed to control
and program the ICOM IC-R8500 receiver. Programmed using Tcl/Tk,
it runs on Linux, Windows 98, Windows ME, Windows XP,
and perhaps MacOS X.

(You must install the free Tcl/Tk interpreter prior to running
tk8500. See web page for instructions.)

New features in experimental version 0.6 include:

Users can now separate the sliders and keypad controls into
a separate Adjustments window. This permits smaller sized
windows when using a low resolution monitor (e.g., 800x600).

A new Frequency Usage Note field is shown below the
digital frequency display. A note can be defined for
each memory channel in the .csv file and can be several
characters long. Users may choose a custom font style and
size for the Note field or hide it completely.
The Note is distinct from the 8 character label stored
within the radio.

The Session History window now displays the first 8 characters
of the frequency label.

A tk8500.bat file and new installation procedure is used to
provide the same installation for all versions Windows.

See Release Notes web page for more info.

I don't warrant the software, though it won't cost you anything.

Heck... I haven't sold in the newsgroups for years. Seems like everyone in the newsgroups wants to do COD and is scared to death of being cheated. Everyone wants to dicker stuff down to free when the price is already rock bottom. Everyone whines and complains about the smallest transaction details and "bad trader" threads go on and on over nothing.

I've been selling on Ebay, making a fortune, and enjoying every minute of it. I'll never turn back. Just not worth the aggravation.

Source record: 45397

Hello!

I'm selling the following:

Winradio 1550e scanner in original box (US model) with all cables & manuals
Winradio AX-31B antenna in original box
Winradio Trunking software
Texas 2way 4 level FSK decoder (brand new in original wrap)

Everything is in like new condition, and was purchased about 90 days ago. I jumped head-first into the hobby, and discovered that I don't use this stuff nearly enough to keep it.

$700 plus shipping - feel free to make offers

Thanks!

Jeff

I agree with the cookie sheet, works good, until it's needed for bakeing (LOL). I have used the top of 'fridge for a ground plane, I have used it for CB in the past, 2 Meter and scanning. If the wife doesn't object try the fridge.

My opinion

> Table 3

If a discone has -1 dBi gain and a dipole has +2 dBi gain it proves
that it doesn't mean squat. I doubt anyone can hear 3db difference in
a signal.

Discones are great. The HIGHER the better and always use good low loss
coax. Don't be a dolt and put it up with RG8 or such crap.

> website.

I've found that a lot of scanner antennas are advertised with having coverage from 25-1300 MHZ, yet I doubt any of them perform equally well in that entire frequency range. You can get coverage with varying degrees of performace with a 6" long wire. Read the descriptions of scanner antennas in the Radio Shack catalog and you'll see the 25-1300 MHZ range quoted often.

I'm sure the box probably is more accurate, and I'm sure you'll be able to hear signals in the missing ranges somewhat well. But it's a misnomer when manufacturers advertise the 25-1300 MHZ coverage.

Well, I never sat and gambled with a scanner on (didn't have time) but we had to walk thru the casino to leave everytime we chased down a story. No one said boo about that.

But I DID listen in to see which machines were paying out... next time I go I'll test a little theory of mine...

>than 8 freqs. for the 2008? Is it the same mod for a Pro-2009?

Nope. All the work that would have to be done to the front end and all just
doesn't make sense to do it.

I will use it though :-).....throw some EMS or the local fire, it'll get
worked.

'llI add that I have seen some gov't vehicles with the antennaes that have suctions cups on the inside of their windows.

Some I have seen with them right at the edge of the windows or on the side windows right against the fabric, they are very stealthy. :-) They must work pretty good for the gov't to use them, I would think.

If you can return it in exchange for their $20 mobile magnetic antenna, you can use that pretty well inside. Just stick it to a file cabinet or some other metal object, or even a flat metal plate of some kind, and try to get it near a window.

"Near a window" = good;

"mounted to my computer desk" = if possible I'd try to locate it away fro the computer (and the RF noise the computer equipment put out).

I'd say the suggestion to exchange ot for a magmount is a pretty good idea. For years I've used Radio Shack's model # 20-032 and found it to be a good all-around antenna. See http://www.radioshack.com/searchsku.asp?find=20-032

I live in Shelby and I noticed my radio went dead on 460.200. I still hear
a few calls every now and then from Shelby on 460.200 (what's up with that?)
I was going to email you Bill to see if you knew what was up. Nothing in
the papers here about a new radio service nor any discussions about
financing such a system. The sheriffs system will cost big bucks and they
want to raise 911 fees to cover it. Shelby aint got that kind of money.

Amateur Radio Newsline™ Report 1302 July 26th, 2002

Amateur Radio Newsline report number 1302 with a release date of
Friday, July 26th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A giant solar flare causes problems on the High Frequency bands and a popular ARRL Director calls it quits. These stories are first on Amateur Radio Newsline report number 1302 coming your way right now.

(Billboard Cart Here)

**

PROPAGATION: X CLASS SOLAR FLARE CLOSES HF BANDS

If you have been wondering where all the signals you normally hear on the High Frequency bands have gone, we have the answer. A large flare on the Sun effectively closed them down. Amateur Radio Newsline's Don Wilbanks tells us about the solar eruption and what it could mean for ham radio:

--

Solar flares come in all sizes, and the Astro Alert service says the latest ones are some of the largest. The E-newsletter says that the sunspot complex believed to be responsible for a July 21st X Class flare rotated fully into Earth's view on July 22nd. It announced its arrival by spawning a second and spectacularly powerful X Class 4.8 level eruption.

Solar Alert says that this latest flaring region has the potential to produce substantial effects on Earth over the next two weeks and we could see more than we have in the last 10 years. It all depends on whether or not the sunspot complex continues to pump out activity at the same rate that it is presumed to have produced over the last several days.

For radio hobbyists it means that there could be very little to hear on the bands from 1.8 to 30 MHz for a while. And, depending on the level of atmospheric ionization that takes place, it also could bring some unexpected long distance communications to 6 meters and above. If you have weak signal gear for the world above 50 MHz, keep and ear on frequencies like 50.110 and 50.125 MHz and be prepared to hear -- and to work -- the unexpected.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans.

--

More on this story is in the Solar Alert URL at
http://www.spacew.com/astroalert.html. (WDX6AA)

**

HAM RADIO POLITICS: ARRL BOARD MEETS IN CONNECTICUT

The American Radio Relay League has held its 2nd meeting of 2002. It took place July 19th to the 20th in Windsor, Connecticut. Amateur Radio Newsline’s Cathy Anno, KB0FDU, has the details:

--
Perhaps the biggest news came as the Board Meeting was getting ready to begin. Thats when the American Radio Relay League was named to receive a $181,900 homeland security grant from the U-S government to train Amateur Radio operators in emergency communication. The A-R-R-L was among several dozen nonprofit organizations designated to receive upward of $10.3 million in federal money to boost homeland defense volunteer programs. The grant, from the Corporation for National and Community Service Special Volunteer program, will provide free ARRL Amateur Radio Emergency Communications Course training to 5200 volunteers nationwide, starting in 2003.

According to the ARRL South-Eastern Division E-letter, one issue that garnered a lot of conversation was the plan to remove the Section News columns in QST to the ARRL web-site. This proposal was presented last January but a decision was deferred for six months. Now the Leagues Directors, by a 9-6 vote, decided to approve the change.

Starting with the January 2003 issue of QST, columns from the 71 Section Managers will be moved to the web-site. ARRL staff will make provisions for those without web access, to have access to their own Section Managers column. The Board also voted to move the contest line scores out of QST and post them on the web as well.

ARRL's Development Director Mary Hobart, N1MMH, presented a new creative method of increasing member awareness. Soon, ARRL members will be asked to participate in a premium membership program. Various levels of membership will be created, like Diamond Club and Maxim Society. The higher level of participation the better the premium benefit received. Details on this program will be announced soon.

The board named Sherri Brower, W4STB, Vero Beach, Florida, as winner of the McGan Memorial Silver Antennas Award for Public Relations. Bower, who becomes Section Manager of South Florida on October 1st, was cited for her long-term commitment and dedication to present all aspects of amateur radio to the public. ARRL South Eastern Division Director Frank Butler, W4RH, will present the award to Bower at the Melbourne Hamfest in Melbourne Florida on September 14.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

For full coverage of the ARRL Board meeting take your web browser over to www.arrl.org. (ARRL S.E. Division E-Letter)

**

HAM RADIO POLITICS: WB8BGY RESIGNS AS GREAT LAKES ARRL DIRECTOR

And a big surprise happened Saturday July 20th during the ARRL Board of Directors meeting on. That’s where Great Lakes Division Director George Race, WB8BGY, of Albion, Michigan, unexpectedly tendered his resignation. Amateur Radio Newsline’s Fred Vobbe, W8HDU reports:

--

George Race, WB8BGY, who is 66, has served on the ARRL Board of Directors for 12 years. Prior to that, he held numerous other field organization positions including several terms as Michigan Section Manager. Race is legendary within the ARRL field organization for his travels around the Great Lakes Division. Each year he has spenr btween 45,000 to 50,000 on the road on the League's behalf and has literally worn out three cars in the process.

Race admits that a Board vote to move ''Section News'' from QST magazine to the World Wide Web did play a small part in his decision to resign, it was not the primary factor. Rather it was time. Time to devote to his wife and family. WB8BGY sayd that there is life beyond the League.

Accolades for Race were quick in coming. One of the first was from ARRL President Emiritus George Wilson, W4OYI. He told Amateur Radio Newsline that George Race devoted decades to furthering the cause of both ham radio and the League. Wilson called Race a tireless worker on behalf of the hobby adding that he definately will be missed.

Reporting from the ARRL’s Great Lakes Division, I’m Fred Vobbe, W8HDU.

--

By normal succession of officers, Great Lakes Vice Director Gary Johnston, KI4LA, was declared the new director. ARRL President Jim Haynie, W5JBP, has appointed Michigan Section Manager Dick Mondro, W8FQT, to be the new Great Lakes Vice Director. A successor to Mondro as Michigan Section Manager is expected to be named soon. (Adapted from ARRL Bulletin, W4OYI)

RADIO LAW: CQ SAYS YES TO NEW HAM BANDS

The publisher of several hobby radio magazines is urging the FCCto proceed in the creation of several new ham bands. However, it is voicing significant concern that the regulatory agency appears to be placing the interests of unlicensed services on a par with, if not ahead of, those of licensed services. Amateur Radio Newsline’s David Black, KB4KCH, tellks us who filed and why:

--

Most magazine publishers traditionally stay out ham radio politics. But the people who publish CQ Amateur Radio, CQ VHF and Popular Communications magazines are making an exception this time.

The publishers have filed comments with the FCC strongly supporting proposals that would create two new amateur bands and elevate a current amateur allocation from secondary to primary status.

CQ wants the FCC to adopt a proposal to create a "splinter band" at 135.7 to 137.8 kHz -- this would give amateur radio its first allocation above 200 meters in nearly a century. The company proposes opening the band to all amateurs with General Class or higher licenses, not imposing mode restrictions and making technical requirements flexible enough to encourage a wide range of experimentation.

CQ is also pushing for creation of a new ham band at 60 meters from 5.250 to 5.400 Mhz. The proposal suggests that full amateur power be permitted; that there be no sub-banding, either by mode or by license class; and that the band be open to all amateurs with HF privileges. That would include CW privileges for hams holding Novice Class licenses or Technician licenses with code credit.

Finally, CQ voices strong support for the FCC's proposal to make the Amateur Service primary on 2400 to 2402 MHz. The publishers say they're very concerned about one Commission request in its Notice of Proposed Rule Making. That requests solicits comments on the change in status that might affect non-licensed users of this band, such as cordless telephones and wireless computer networks.

CQ wants the Commission to reaffirm its long-standing policy that the interests of licensed operators and services are primary on any frequencies shared by licensed and non-licensed users.

For the Amateur Radio Newsline, Im David Black, KB4KCH.

--

CQ's comments were filed electronically and may be viewed in full on the FCC's Electronic Comment Filing System website at www.fcc.gov/e-file/ecfs.html by selecting "Search for Filed Comments," then typing in "02-98" under "Proceeding" on the search page, scrolling through comment summaries until the CQ comments are reached. (CQ)

**

RADIO LAW: COMMISSION REQUIRES RADAR DETECTORS TO COMPLY WITH EMISSION LIMITS

The FCC has imposed new emission limits and certification requirements on radar detectors. This, to prevent them from causing interference to very small aperture satellite terminals that operate with downlink frequencies in the 11.7 to 12.2 GHz band. Tests at the Commission's Laboratory have shown that some radar detectors emit radio signals in the downlink band far in excess of the limits that apply to other unintentional radiators. As a result of the new standards, radar detectors sold in the United States will have to meet the new and more stringent limits. The complete document is at

http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-224518A1.doc (CGC Communicator)

**

RADIO LAW: VOTE ON NEW FCC COMMISSIONER EXPECTED

Ending months of political bickering over judicial nominations, a senate panel approved a longtime aide to Senate Majority Leader Tom Daschle for a seat on the Federal Communications Commission. The nomination of Jonathan S. Adelstein, who has worked for the Democratic leader since 1995, will go to the full Senate for a vote.

Approval is expected, with several Republican senators saying they would vote for the South Dakota native. The FCC panel has five commissioners, who are nominated by the president and confirmed by the Senate. Only three can be from the same political party. (Congressional Review)

**

ENFORCEMENT: WISCONSIN HAM ASKED ABOUT CB SALES

The FCC has asked a Wisconsin ham to explain his connection to a website that purportedly offers for sale C-B equipment not certified by the agency. The FCC’s Riley Hollingsworth explains:

--
Hollingsworth: “We opened an inquirey regarding the marketing of non certified radio equipment including non certified CB transceivers and HF linear amplifiers by Roper Electronics. Roper Electronics has a web page entitled tomah.com, and we are inquiring into the relationship between Roper Electronics and Randi Owen, N9UOM, of Tomah Wisconsin.”
--

Specifically, Owen was asked to fully describe his relationship, if any, with Roper Electronics. Also, if it turns out that he owns or is affiliated with Roper, he was requested to furnish the FCC a listing of all models of HF transceivers and amplifiers domestically sold and/or offered for sale by Roper since January 1st of this year. That list must include the FCC certification number for each model.

The letter of inquiry went out to Owen on June 18th. Hollingsworth says that a reply to that inquiry is do in right now. (FCC, RAIN)

**

HAM SCHOLARSHIPS: FAR SCHOLARSHIP WINNERS ANNOUNCED

The Foundation For amateur Radio has announced this year’s winners for the fifty-seven scholarships which it administers. The names of the recipients for the individual awards appear on a list at several websites including the ARRL. For more information, write FAR Scholarships, PO Box 831, Riverdale, Maryland, 20783. The announcement for the year 2003 awards availability will be made early next year. (FAR)

**

UPCOMING EVENTS: PACKARD AUTOMOBILE CELEBRATION

On the special events calendar, the Warren Ohio Amateur Radio Association will be operating special events station W8P to commemorate the annual Packard automobile celebration and car show. The Warren group will operate on the 40, 20, 15 and 10 meter bands. QSL's go to the Warren Amateur Radio Association, Post Office Box 809, Warren Ohio. The Zipcode there is 44482 (Via Internet Posting)

**

UPCOMING EVENTS: OH-KY-IN HAMFEST

Still in Ohio, but over in Cincinnati, the OH-KY-IN Amateur Radio Society will be holding its annual hamfest on July 27th. The venue is the Diamond Oaks Career Development Campus and this event features seminars, hidden transmitter hunts and a giant flea market. More information on this one is on the web at www dot ohkyin dot org. And in case you are wondering what OH-KY-IN stands for – its Ohio, Kentucky and Indiana – the three states that provide most of the attendees to this annual event. (Via E-Mail)

**

UPCOMING EVENTS: NATIONAL BABY FOOD FESTIVAL

From one of our listeners in Michigan comes word that W1B is a special event operation from the National Baby Food Festival. Yes, there really is a National Baby Food Festival and W1B will operate the General class areas of 75, 40, 20, 15 and 10 meters while its underway. And if you work this one, you QSL with a self addressed stamped envelope to Shawn Gibson, KC8LGD, 3377 West 80th Street in Newaygo Michigan. Gibson’s zipcode is 49337. (Via Internet Posting)

HAM RADIO IN SPACE: RUSSIA SAYS BASS LIKELY TO FLY TO ISS

The Russian space company Rosaviakosmos has announced that N*SYNC singer Lance Bass has signed a preliminary contract and is officially a candidate for a Russian mission to the International Space Station this October. This, even the United States National Aeronautics and Space Administration, which partners with the Russians on the space station project has expressed concerns that the pop musician may lack the proper education, endurance and fluency in Russian to undertake such a journey.

But a spokesman at Russia's Baikonur Cosmodrome training center in says that within a week Bass will begin training. The spokesman said that the singer should be able to cover enough ground to make the trip adding that three months was more than enough time to teach him the basics.

Bass will be the third space tourist to pay Russia $20 million to visit the orbiting outpost. Previous space visitors were U.S. millionaire Dennis Tito KG6FZX and South African entrepreneur Mark Shuttleworth. Tito and Shuttleworth did find time to use the ham gear on board the station. Bass interest in Amateur Radio operations from the ISS is still unknown. (ARNewsline™ from published news reports)

**

RADIO IN SPACE: LISTEN TO JUPITER ON YOUR HAM TRANSCEIVER

Want to hear what’s happening on the planet Jupiter? Just listen on the 15 meter band. So says Popular Communications Magazine in an article aptly titled Listening To Jupiter On Your Shortwave Receiver.

No, you won’t hear the latest scores from the Jupiter Red Sox playing the Mars Marlins. What can be heard is the natural sound of the orange giant. An electromagnetic wave that’s emitted at irregular intervals by Jupiter that the article describes as a sweeping lighthouse like sound.

All you need to listen in is a shortwave receiver that can tune the good old A-M mode and a decent antenna. Exactly how to listen and what to listen for is on pages 8 and 9 o the August issue of the magazine. (PopComm)

**

INTERNATIONAL - NEW ZEALAND: TECHNOLOGY CONVENTION 2003

From Down-Under, word that the New Zealand ham radio Technology Convention will now be held once every two years. Formerly called the VHF Convention, this bi-annual event now caters for a broader range of interests.

The Convention was last in Whangarei over Easter Weekend 2001. The New Zealand Association of Radio Transmitters days that it is currently is looking for a host club for Technology Convention, 2003. (NZART)

INTERNATIONAL - UK: HAMS GET NEW PROPAGATION STUDY BAND:

UK Radio Amateurs will shortly be able to use a number of spot frequencies around 5 MHz, to take part in a four-year propagation study. A full Class-A license holder wishing to take part will require a Notice of Variation to his existing license. At the present time, the final administrative arrangements are being put into place. A further announcement will be made regarding the start date shortly. (GB2RS)

**

INTERNATIONAL - UK: THE GREAT NEW TOOTH PHONE

Meantime, a pair of British engineers say they have invented a revolutionary tooth implant that works like a mobile phone. The 'tooth phone', designed by researchers James Auger and Jimmy Loizeau, consists of a micro sized receiver, transmitter and a transducer that are implanted into a tooth during routine dental surgery. Sound, which comes from the tooth is transferred to the inner ear by bone resonance. This means information can be received anywhere and nobody else can listen in. (Science & Technology)

**

DX

In DX, DJ6TK, is vacationing and operating 6 meters from Bornholm Island on CW and SSB mostly in his afternoon or late evening hours UTC. Listen for him signing JO75LA and possibly from JO74MX as well. (MDX)

I2IA stroke ID9 will be active from Ipari Island through September 15th. He intends to visit also other islands in the Eolie group during this time. (GB2RS)

And a group of operators from Indonesia and Italy plan to activate Masalembu Island as 8A3M from July 29th through August 4th. They expect to be on the air with two or three stations on SSB, CW and RTTY. QSL via IZ8CCW. (OPDX)

**

THAT FINAL ITEM: CAPTAIN KIRK - “THEY BE WHALES”

In what sounds like it’s right out of a Star Trek movie plot, will Captain Kirk and Mr. Spock have to go rescue some whales from oblivion after all? And what does this have to do with radio communications? Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the answers to both of these questions:

--

In the movie Star Trek The Voyage Home, the crew of the star-ship Enterprise -- without the Enterprise -- takes on the job of saving our planet from annihilation by a space probe. The probe is angry because it is programmed to contact Humpback whales, but it cannot find any because all the whales are long gone from the planet. To save the world, Kirk and crew travel back in time to get some whales and bring them into the future.

With that in mind, picture this. The administration has now given the Navy permission to begin using a powerful new low-frequency SONAR to identify enemy submarines.

SONAR, which stands for Sound Navigation and Ranging, is usually used to observe objects in water to determine distance. According to the Navy, each of the new SONAR’s eighteen transducers produces an audio signal equivalent to the noise level you would hear if you stood next to an F-15 fighter jet while I was taking-off. It is this high power that makes it possible for the sound waves to travel several hundred miles and return an accurate target echo.

But environmentalists are worried. They note that that the new SONAR system operates in the same band of frequencies used for communication by many large

whales, including Humpbacks. They say that whales are particularly susceptible to SONAR interference because they rely on sound for communication, feeding, mating and migration. In fact, they navigate the oceans of the world using a kind of natural SONAR of their own.

Some scientists believe that whales will mistake the Navy SONAR signals for other whale pods and swim in the wrong direction. And they believe that if this happens, the worlds whale population will decrease.

Others disagree. This group of researchers believes that the two can co-exist with careful monitoring of the whales for any adverse effects which might be noticed. Adjustments could then be made to the SONAR systems operation to minimize or eliminate any problems.

The bottom line is that it's a tradeoff in communications. That of the whales versus the need of the public to be safe from enemy attack.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

The National Marine Fisheries Service says with proper monitoring and safeguards, the Navy’s new SONAR is not likely to injure whales or any other marine mammals. But to be on the safe side, we hope Captain Kirk, Mr. Spock and Scotty are standing by. (Adapted from published news reports)

Hi,

For a VHF/UHF receive Only antenna, can i get away with the coax 239 type connectors, or do I need the N connectors if the upper freq. range I'll be listening to is:

2 GHz ?

Same answer if I drop the upper range to 1.5 GHz ?

Thanks,
Bob

Raw data files are downloaded from here
ftp://ftp.fcc.gov/pub/Bureaus/Wireless/Databases/uls/daily/

Files with l_lp_ at the beginning are the raw files that contain the data
that we are looking for. It is delimited by a pipe.

A Visual Basic program that I wrote takes the data and imports into a Microsoft
Access Database format. I then use SQL queries to pull each state's data from
the database and output it into a text and html format.

If you're going to be listening that high, I'd certainly use the low-loss
connector over the SO-239.

Bob

Theoretically the SO 239 is OK up to about 500mhz. Above that N connectors
should be used. However the question is can you use the SO 239 at the Ghz range
and I would say a cautious "probably" . I once saw a loss plot for the 2 connectors
using a HP analyser and the 239 does start getting lossy above 500mhz. But I suppose
it depends on the original signal strength and the coax. If you want to use RG 58 and
and 239s above 500mhz,, forget it unless you have about a 5' run. If your going to be
seriously listening above 1 Ghz,, got to RadioWare.com and get a couple of their
easy connct N connectors that will work on 9913 or similar coax. What kind of
antenna are you going to use, since most of them come with the UHF (SO 239)
already on them? The Nevada SM 1500 antenna comes with the N connector
and is supposed to be good up to 1500mhz. Otherwise if you have an antenna
with the UHF connector on it use the 239 with 9913 or similar coax. Or get a
239 to F adapter and use RG 6 cable coax.

Jeff

I guess it would depend on the coax you use. At those high of freqs, most
off the shelf types are going to be pretty lossy, probably wont notice the
loss in the connectors.

Source record: 45424

It looks like the DJ-X3 is more suited to AM/FM broadcast listening with WFM stereo receive and built-in ferrite bar antenna. The VR-500 is better suited for communications use with SSB/CW receive modes, steps down to 50 Hz and a BNC antenna connector.

1138. need Yaesu VR-150 owners to help me write software

Newsgroup: rec.radio.scanner
Date: 2002-07-28 16:41:22 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d441eb9$0$3574$272ea4a1@news.execpc.com>
Source record: 45428
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

VR-150 owners:

I live in the USA and do not own a
Yaesu VR-150 portable receiver.

The VR-150 looks like a very interesting 1000 channel/CTCSS
variant of the VR-120.

Please contact me if you own a VR-150 and are interested
in helping me and other hobbyists to develop open source
software to program the VR-150 radio.

I would need you to install my tk120 software (you can
download it free from http://parnass.com) and perform a series
of experiments over the next few weeks. August 2002 Monitoring Times
magazine contains an introductory article about tk120 software
and how it was developed for VR-120 owners as a community effort.

It's not certain we can do this, but I think there's
a very good chance for success. It would require
considerable experimentation and email going back and forth.

Part of the problem is that the VR-150 user manual is written
in Japanese and people who bought VR-150s directly
from Japan may not read Japanese and may not understand all
the radio's features nor how to use them yet.

There is a Yahoo group devoted to the VR-150 but there are
almost no postings to it:

http://groups.yahoo.com/group/YaesuVR150/

Too bad Yaesu doesn't sell the VR-150 in the USA (yet).

Thanks.

Optoelectronics sells a model that is pricey but does all the modes. I have a CD-2, but they are not made anymore.

A booster will not work. Whatever your noise floor is will also be
amplified. One option is to order a higher gain AM/FM antenna
from JC Whitney. You will probably have to drill a new mounting hole and
cable access. Do what you have to do since you have nothing now.

Hello All:

My scanner frequecy book is a few years old, whats the hot ticket on CD or in a book for scanner frequencies.

Maybe web sites?

I am located in the Southern California Mojave Desert, thanks for any help.

Jay in the Mojave

1148. Discone Antenna Question ?

Newsgroup: rec.radio.scanner
Date: 2002-07-28 18:28:16 UTC
From: Robert Rose <rgsrose@tiac.net>
Message-ID: <ai1d8f$754$1@slb1.atl.mindspring.net>
Source record: 45438

Hello:

Am looking for a not too expensive VHF/UHF for installation in my attic.

Receiving only.
Have an old Antenna Specialis MONR 31 which I've never thought too much of.

A lot of people have mentioned Discones.

Would this be a good choice for an omni directional 30 MHz to say 1.5 GHz ?

Caveats ?
Negatives on ?

Thanks,
Bob

Yeah, me. I've been receiving INMARSAT analog transmissions for 8 years. I wrote a 2 part article in Monitoring Times Mag. Feb/Mar 94. on INMARSAT and how to configure an equipment configuration. I also sell INMARSAT reception components and an INMARSAT information package. The information package contains a satellite look angle chart for all communication satellites viewable from a given location in the world; a reprint of the 2 part MT magazine articles; a graphic of INMARSAT world satellite coverage and a component's price/source list. If you or anyone else is interested in INMARSAT reception email me at: <jwilson9@erols.com>. Be advised that only analog signals can be received and individuals looking for something for next to nothing as a a getting on line expense need not bother emailing me.

Tower and other aircraft operations are limited to 10 watts maximum using omnidiectional or other appropriate antennas. Theoretically, at 50% efficiency there's maybe 2-3 watts of RF headed your way. Your receiving antenna should be mounted as high as possible. I recommend buying a Scantenna from Grove Electronics; installing at Radio Shack VHF/FM/UHF TV mast mounted preamp and using RG-6 coax cable. Among other transmissions, I hear 121.900 mhz. Ground Control operations including plane to tower and also the 266.6000 mhz. AM weather transmission from the Richmond, Va., airport located about 25 air miles. I use what I just mentioned, but my antennas are towered mounted at 125 ft. I understand that you cannot do that. The antenna does not have to be that high, but it should be as high as possible by possibly mounting it in a high tree close by. Where there is a will, there's a way. The Scantenna should be mounted vertically and it is somewhat directional. As for using yagi antennas, buy an FM yagi and cut the elements appropriately for higher frequency operation and use a VHF/FM preamp. Mount it as high as possible toward the airport. Absent doing something drastic you will not receive the desired transmissions.

1. So nobody would know to listen to the military 398 mhz. FRS type frequencies vice the 462/467 mhz. FRS frequencies??????????

2. 446 mhz. is in the amateur radio band, not the FRS 462/467 mhz. range.

3. The part about country frequency coordination is correct. As a retired govt. employee, in the mid 90s we wished to use a 300 mhz. frequency using less than 1/2 watt power for remote sensors on rail cars in Germany to track various shipments. Remote sensoring was just beginning and Germany resisted. Their complaints were not accepted and the agency went ahead as planned using the 300 mhz. frequency since the US govt. was paying the bill.

You are correct. A recent documentary on the Travel Channel in part disclosed a constant RF spectrum monitoring from DC to daylight by various Las Vegas casinos using various equipment to include spectrum analyzers. With over 400 VCRs per establishment recording 24/7 don't think they don't have the money or means to monitor whatever. They do. You can bet that when your HT receiver trips a threshold sensitivity on monitoring equipment, an alarm will sound and security will be on you like stink on shit. You will probably be asked to leave. They don't care about your purposes or intentions. It is private property and you comply or leave. Also, by this time your photo probably has been digitally taken and entered into a database for future reference.

I've been using a handheld scanner for years and finally upgrading to a mobile unit in my car. I just don't know the first thing about choosing an antenna. I've spent a ton of time reading facts sheets which I totally don't understand. Could someone maybe give me a dumbed down version of a basic antenna. The scanner is a BC865XLT and the primary band used is 800 MHZ trunked and some of the time 150 MHZ fire broadcasts. I know some of the advantages of the outboard vs the glass mount antenna but I'd like to know details. Thanks a lot.

1160. PRO 2004 Scanner - $175

For Sale:

PRO 2004 scanner. Excellent shape. Sometimes it will receive the 88-108 MHz FM broadcast band and other times it won't. Otherwise, works perfect. Backlight is very bright. Has a unique professional quality 400 channel keypad overlay. Includes original instruction manual. $175 OBO plus shipping.

Also have an original PRO 2004 Radio Shack EL backlight for $25 and an original PRO 2004 service manual for $20.

Will discount the entire package above if you want everything. Make me a fair offer.

Thanks,
Steve

Hi; I just bought the Radio Shack mobile magnetic mount scanner antenna and it works flawless. My question is this. It does come aprt at half with an allen screw but to leave on my vehicle roof to fit in my garage with door up I need to cut off about 5 inches of the metal rod. Would this hurt reception dramtically. What frequency would it cut out more. I'm talking about cutting down the vertical rod after the second part set screw to meet the height of my garage without playing with the setscrew 2-3 times each day when I take the vehicle in and out. Nick

Just remove the mag mount antenna from the roof line and lay it flat on
the vehicle's roof. This will allow the car to go into your garage
with out cutting the antenna. It's a pain to take down and set up
each time the vehicle is put a way so cutting off several inches
from the top of the antenna would be more particle. For Receive
only and if it's just five (5) inches this should not affect reception
on the higher bands, it will degrade the low band ,VHF 30 Mhz to
50 Mhz work.

I us a Radio Shack mag mount cell phone antenna. It work great
on 800 Mhz trunking systems and will do better than your rubber
ducky or telescoping stock antenna on VHF-Hi (150 Mhz)
Radio Shack also sells and adapter to go to BNC from SMA.
or cut off the cell phone connector and us a screw on BNC.
A mag mount all band scanner antenna is also a good choice
if your working VHF UHF and 800/900 Mhz. I like mag mounts
because they can easily be removed to go through a car wash
or under a parking garage. they will knock over onto the vehicle's
roof rather than snapping off when hit by a low tree branch!
Other manufactures sell these type antennas, try
<http:www/grove-ent.com> or scanner world.
another type is gutter grip mount or if you can find one
the clip on- rain gutter mount antenna. The throungh glass
antennas will only give gain on the band they are designed for
I. E. a cell phone glass mount will received on 800 Mhz but
do poorly on 150 Mhz and a Ham 144-148 will receive 150 Mhz well
but this type glass mount would not receive the 800 Mhz range well.
yet the same hole mouned, grip mounted or mag mounted unit
would do O. K. on most bands above 50 Mhz.

Hello,

Does anyone have experience scanning Albuquerque, NM ... Police, Fire, EMS ?? .... I'm pretty much a newbie to scanning trunked freq's and seems I need to know the control freq and other channel freqs. Using a PRO-92 scanner. Found the freqs at CityFreq, but I don't know other information. Help me if you can, Please.

Thanks in advance,
David

Hello Moparholic:

Thanks a million for the help, I have gotin a bunch of e-mail replies on all kinds of different web sites, and even local frequency sources.

And one scanner nut type ah guy just north of me that has run down all kinds of intresting scanner frequencies. Most of the frequencies are in the books but ya's needs to know which ones are actually used. You could hear all kinds of diffeent scanners makin noise in the background while talkin to the guy on the phone.

I found a local Search and Resuce group on the VHF Low Band, and my 6 Meter Interceptor 10K brings them in much better than the store bought scanner antennas do. Oustanding..... I have a scanner antenna in the works called the Flat Top.

Oh by the way, your boy there #40 Mr. Sterling Marin, and his Pit Crew, and Spotters, are on the following frequencies: (MHz)
462.1
461.375
463.9375
451.325

I was at the Winston West 200 (Irinwindale Speedway) last night (had a blast) doing a little work with the boys with some radio problems.

I have never seen so many Honey's woundering around, with so few clothes.....TILT!!!!! No wounder theres are so many crashs.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Hi Nick, Return that antenna. Purchase a NMO mount, "L" bracket and mount your antenna in the slot between the hood and front fender. I have had mine mounted there for over 15 years and it works very good.

Hi,

Will be wiring a VHF/UHF aerial from atic to downstairs.

Do listening only; hopefully up to around 2 GHz

The aerial I wired up in my attic sfor VHF/UHF use some 25 years ago, I see, is using RG 8U.
Beginning to think that that's the reason I've never been very happy with my reception?

a. Couldn't find the specs for LMR 400, which has been suggested that I use.

How does it compare vs the RG8's (with & without the letter suffixes) for loss?

What's the O.D. for the LMR 400? A bit concerned about trying to run large O.D. wire (and explaining it to my wife)

-The RG8 without a letter suffix seem to be "only" about 1 db more of loss/100 ft compared to the LMR 400 with it's much larger diameter.

-Think it's worth the aggrivation to string the larger diameter stuff? Would I likely notice the difference in a practical sense?

-Anything available less than 1/2 inch diameter comaparable to the LMR 400 ?

b. Also, much of a difference for loss when one compares type N connectors with the small BNC's at 1.5-2.0 GHz ?

Thanks,
Bob

Hey, good for you. I'm glad your making a fortune.
I'm sure you've fucked a lot of people along the way.
Now that you've made so much money why do you
come here and brag about it? Do you always pay
the asking price at a flea market, ham fest or garage
sale?? I'm sure you're like everyone else and negotiate
a fair price if you think the item is too high priced.

Ebay is another dot com fad that's making the owners
a fortune. I hope it crashes and burns.

Monty Python (aka--un identified coward) Buyers on Ebay make thier own price...If they get screwed, they do it to themselves...I dont like it , but its there to stay, and I cant seem to find anything to buy on the groups anymore....guess that is why...on ebay you can pay as much or as little as you like!! Ive never sold anything there that I thought brought good money....but I see people do really stupid things, on pricing...OH WELL...you need some prozac i think..hihi Ill go take mine now!! M

Personally I will not buy anything which is advertised on this (or any) newsgroups. Its far safer to buy it on eBay. You can set the price you want to pay, you have the ability to pay for your item via PayPal or Credit Card, and you have a recourse for if the item is missrepresented.

I've also found that buying on eBay is far CHEAPER than purchasing used equipment from the OnLine ham shops such as AES, Universal, and others who sell used gear.

I'm not putting down AES or Universal, in fact I've bought new equipment from both and both offer excellent service. But if you look at their used equipment lists the prices are about 20% - 30% higher than if you shopped around on eBay. Here are some recent examples: Kenwood R-5000 AES used for $450. About 2 months ago I purchased one on Ebay for $375 including shipping. AES has a used Icom R-71A for $400.00, I just seen one in excellent condition sell for $275.00 on eBay ($125.00 less then AES's used price).

Now, how can you say the you get screwed by shopping and buying on eBay. If you get screwed you only did it to yourself.....

That's a lie George. You bought from AntennaWarehouse and they
advertised on here. Well, they did until I asked them what antennas
they claimed to have spent a summer testing against their Scanner
Beam. AntennaWarehouse could not back their fraudulent claims and quit
posting and GeorgeF the Shill took over and even now continues
perpetuating their fraud on his website.

Personally you are a liar and a fraud George.

Actually I would think they would quit making 780's as the 785 is the
very same thing except will accept a digital card and has 1000 channels.

The 785 and 780 are pretty much the same price (if you don't care about
the APCO digital card) so why manufacture both?

Here's another - I found this:

Albuquerque Public Safety System

Albuquerque, NM

System Name: Albuquerque Public Safety
Location: Albuquerque, NM
County: Bernalillo
System Type: EDACS Wide Area AEGIS
Digital Type: AGEIS
Last Updated: 04-03-02 00:37
Hits: 11

Most operations on this system are using Ericsson's AEGIS Digital Voice solution, which is not monitorable by any scanner today.

Talkgroups are backed up on each different site - meaning that any of these talkgroups can appear on any of these sites.

There are some reported analog operations on this system, but for the most part all public safety operations are using the AEGIS Digital solution.

Unless your above 1GHz, It's less than 1/10th of a dB
I did measure a 90 degree N connector at 18GHz once and it was .5dB
insertion loss.

Hi
Waters and Stanton are doing the DJ-X3 for £109.00
http://www.wsplc.com/
I have one and find it very good, they are about as good as the vr500 only
they do not have ssb, but then again the vr500 is £100.00 more expensive
regards
Wizard

Looking for the front bezel for the Regency MX-7000. I don't need any of the electronics, just the membrane keypad and associated ribbon connector (panel and keypad are one piece). If you have a junk MX-7000, which could be used for parts, I'd be interested.

Unit does not have to be complete. RF portion unimportant.

Thanks

John

Hello me:

Who's me?

You mean Ivin or Gary? I talked to one of them on the phone, but can't
remember which one?

Gary is on channel, 12 AM sometimes.

I can rerun the test on my network analyzer, but seem to recall that a
PL259/female barrell/PL259 junction was under 0.2dB at 500 MHz.

[snip]

I had a very satisfactory deal buying a scanner from someone on
rec.radio.scanner. Fair price, everything as advertised.

Just one deal, not so much money that I'd have freaked if it went
wrong, ymmv, etc. But it was fine.

I've also sold some extra NASCAR race tickets on
rec.auto.sport.nascar. No problem collecting the money.

Again, ymmv, but I wouldn't categorically exclude any particular
method of buying and selling.

Most voice communications in the HF bands (1.8 to 30 MHz) use SSB, such as amateur radio and marine. Freebanders and CBers (in the US, not sure about elsewhere) also use SSB in the 26-28 MHz range.

1204. FS: Icom R7100 with full cell

Newsgroup: rec.radio.scanner
Date: 2002-07-30 02:32:23 UTC
From: grenner <regencytr1@hotmail.com>
Message-ID: <YUm19.30391$eH2.12624275@ruti.visi.com>
Source record: 45394
Cross-posted to: rec.radio.swap,rec.radio.scanner

This is an Icom R7100 Communications Receiver which aside from it's usual
coverage covers the full cell band.
The radio works perfectly but has some scratches on the top of the case.
There are no scratches on the display.

Included are the radio, power cord and manual.
I am selling this to move to an R8500
$625 OBO shipped CONUS
Greg

Be careful when taking cookie sheets without permission, however. My girlfriend was NOT happy when she found "my good cookie sheet" wedged in between the rain guttering and roof shingles.

The explanation that it was a necessary ground plane for the mag mount scanner antenna attached to it did not seem to make much difference in her disposition.

I have a few general comments. I would choose a cable based on the type of listening you're doing, especially at the higher frequencies. If the signals are mostly local and strong, or you primarily listen to VHF frequencies, why bother going to something expensive and unwieldy? Additionally, you have control over the length of cable between your antenna and the receiver, so you can control loss that way as well. It's worth noting that cables deteriorate over time, and cheap cables deteriorate over a span of a couple of years. I would opt to go with a quality product that's low maintenance and stable over several years (10 or more).

To specifically answer some of your questions, the outer diameter for the LMR 400 is 0.405 inches. A good source of information is the ARRL Handbook for Radio Amateurs. Chapter 19 has info on a variety of coaxial cables (including LMR 400), such as the attenuation at different frequencies up to 1 GHz. Chapter 24 has properties of connectors, such as type N and BNC. This book is probably available at your local public library - it is at mine. I was surprised to find out that BNC connectors are usable up to 11 GHz and have a max insertion loss of 0.2 dB at 3 GHz. However, the N connector has a max insertion loss of 0.15 dB at 10 GHz.

Two vendors I've dealt with are:

http://www.davisrf.com/amateur.htm

http://www.thewireman.com/

The Davis RF site has a lot of useful info. I use their BuryFlex cable and find it to be excellent. However, I use it for my ham transceiver and don't use it above 54 MHz, although it does have good specs up to 1 GHz.

The Wireman has high quality products and I've found them to be helpful. I've used a number of their products, including their RG-8X (CQ-118) and like it a lot. It has a small diameter (0.242 inches) and is easy to work with. However, it has 8.4 dB/100 ft of loss at 1 GHz, and I wouldn't want to use it if I was seriously interested in signals at or above that frequency.

If I had a good quality antenna on one end and a good quality receiver on the other, I'd probably go with a large diameter coax (such as Bury Flex or better), type N connectors, and as short a cable run as possible. Will you be able to hear the difference? It's hard to say, unless you run two cable connections to your antenna so you can compare. However, why buy a high quality receiver if you squander 50-99% of the signal in the transmission line?

Tim

No. Price probably will not drop except for some online dealers who have a lot of inventory. There is still yet to be know question of wether or not the new model can recieve as well as the old. Thats just my opinion and if you need a good scanner i would go ahead and buy now.
I personally would not pay for the digital card unless it comes down to earth. Then you will have two scanners for the price of one.

For monitoring only, go with good quality RG-6QS, such as that used for sat. dish installations. This is a 75 ohm cable, but that's not a problem for monitoring purposes, as your antenna will vary depending on the frequency. You do NOT want to use RG-59, such as used for cable TV installs. The RG-6QS is Quad Shield, very low loss.

I have posted in the group that I personally love my Discone unit. It is the Radio Shack Discone unit, you can get a good one from Diamond as well that is awesome. I use it for scanning the ranges you mentioned as well as for my VHF/UHF ham base transmitter antenna. I can not testify for how it will work in an attic but on a mast that my tv antenna use to be on, I really get great results. Good luck.

Bruce

1212. What scanner / counter

Newsgroup: rec.radio.scanner
Date: 2002-07-30 08:25:59 UTC
From: imooseman@mac.com
Message-ID: <804e266.0207300025.439e8eb@posting.google.com>
Source record: 45252

I'm considering a new scanner. I would like freq counter / reaction tuning.

What do you think would be best:

Good scanner (considering AR 8200 or Icom R10 maybe) + freq counter

or Alinco X2000 (have read mixed reviews on the performance of the flash tune).

I know the Alinco is 'one box' but performance and value for money is more important to me than convenience.

Anyone?

Thanx in advance.

1213. Re: What scanner / counter

As usual, it depends greatly on what you want to use it for. For
instance, if you need trunktracking, none of them are suited for it.

...And I don't have any doubt that some connectors will perform
decently at 500 MHz. The problem is that not all of them will. I use
silver plated ones with Polyethylene center insulation. But you'll
find lots of variants. This is a standard that has been bastardized
so many times that people can get away with just about anything that
looks mechanically like one of these connectors.

In any case, I'm curious what your sample looks like at 500 MHz and
then 1 GHz (If you can).

AlQaida uses the channel 14, 27MHz AM (CB) in clear. Others use channel 11,
but not always.
It's not easy to listen them because they often change CB channel
(14,11,13,...) and for DX communications they use SSB too.

You really have to LOVE these newsgroups.....They are a fine example of an area of the internet that has seen it's heyday come and go a long time ago.

What used to be a mecca of civility for discussing topics related to the group, and maybe selling a used item here and there, has become an arena for true gutter entertainment when bored.

This is not unique to the radio groups alone. Fortunately, you can go to most any newsgroup and see grown men (usually men for some reason), call each other the most vile names, and other choice monikers to beat the band. I love it. You can't get this on Jerry Springer.

Keep up the good work, folks!

LMFAO!

Hey Dan "I'm so Great because I use my real name" Conti,

I'm no moron, I'm not hiding and I could give
a flying fuck what you think. Nothing was directed
at you or about you. I responded to an asshole who
had to brag about selling shit on ebay and how
those of us in this group who ask questions about
an item for sale are a bunch of cry babies.

Here's some advice ... create a filter with "Monty Python"
so you don't have to read what I post. I doubt you will
do that because you love reading what I post and you get
all excited by posting "better than thou" replies.

Dan, when was it a mecca of civility? There have always been flamers, those with different opinion and people that have to read everything and then complain about what they don't like.

I characterized GeorgeF as a Shill, a liar and a fraud. I don't see those as being all that vile or even consider them choice monikers. They describe GeorgeF for what he is, nothing more.

I do agree that back on the net in the non-GUI UNIX days I never had a person do as GeorgeF did and call me up, threaten to sue me and then make remarks directed at my wife over something I posted on the net.

I would think with all your net experience you would have discovered by now that if you ignore those vile and choice moniker slingers they disappear. If you only respond to what you consider on-topic or appropriate the others don't go away but they have less fuel to feed their fire.

The largest contributor to the Cheek flamefest set records for the sheer number of posts, not one related to scanning. When people finally ignored him, he went away. He had nothing to reply to and was unable for some reason to post about scanner related subjects. He only surfaces now when somebody mentions his name or Bill Cheek.

Have a nice day Dan. Good luck in your quest! :-)

Glenn

I must say that I am partial to discones, also. If you get the Radio Shack discone, make sure you secure the elements onto the antenna with the locking nuts. I have a friend who had a RS discone and some of the elements fell off. I suspect that was the reason.

I mentioned a couple weeks ago my military surplus AT-197/GR discone. I love this antenna for UHF monitoring. They're also built like a tank and can take the weather. If you can find one somewhere, get it.

most people just don't understand how much you can save. On my home phone, Vartec has given me 5 cents a minute for all long distance inter and intra state for a long time with no monthly charge. But most people keep paying more than double that. You just have to be part accountant and part bloodhound!

I used Waters & Stanton in the UK. Excellent service & technical support, friendly staff and they beat the best alternative price I gave them! They were a day late on delivery, but I can forgive that small discretion.

www.wsplc.com

I'd thoroughly recommend them, they are clearly a well established and respected trader. A good website overall.

Cheers,

Si.

Hello,
I'm in the Twin Cities area of Minnesota. Some of our local law enforcement agencies will be going live with APCO this fall. The soonest APCO capable scanner sounds like it may be the Uniden, which will cost more than $500 initially.

I don't want to spend that much money initially but am looking for a small scanning receiver. I'm primarily interested in monitoring public safety channels and some aviation.

I've done some initial research and I'm thinking the Icom IC-R2 and Yaesu VR-120D receivers are in my budget range. Doing research on Google groups, it appears that most people have a more favorable opinion of the Icom than the Yeasu receiver. Both are pretty darn small and are small enough for my needs. One thing that I wish the Icom had was the ability to include alphanumeric text of what channels I'm monitoring.

I see that a couple of online retailers have $20 rebates on the Icom and $70 rebates on the Yaesu. Buying from within the US will mean that the receivers have the 800mhz range blocked out. (aesham.com and chq-inc.com have the Icom for $160 and chq-inc.com has the Yaesu for $120 with the rebate)

The other option is to buy from Bandercom or Javiation or another foreign provider. This would enable the receiver to have full frequency capabilities. The rebates offered on the scanners are not offered through the non-US companies and the prices are more expensive.
Javiation has the Icom receiver for approx 130 English pounds which, at the current exchange rate, equals approximately $204 US dollars.

Is it worth it to get the scanner from an non-US retailer and spend a little extra or is it worth it to save some money and get it from a US retailer but not have the full spectrum of frequencies?

Thanks for any & all advice!

Run up to Radio City and Moundsview and check both out they also carry
Alinco. The Uniden digital coming out will not work with the digital
system that is up and running in some parts of the Twin Cities already.
If you want to go foreign I have dealt with Javiation many times and
Jonathan is the best.
The receivers without the keys are kind of a pain and the VR120 has no cable
or software whereas I believe the R2 does. If you can afford the VR 500
that is probably the best choice of the small scanners.

I have a used, but great condition uniden BC780XLT with RS232 and software.
I have all original packing and manual, antennas. I need to sell and will
buy another in a few months.. Photos upon request, asking $325 plus
shipping.

Was thinking of listing on ebay, but I'll give the NG a chance

Also: pardon the OT, but:

1 - 60GB external USB2.0 hard drive, 7200 spin AND, brand new PCMCIA USB 2.0
Adapter (new), need to use firewire for my laptop. Asking $190 shipped
conus.

Hi Tim:

Thanks for such an informative reply on my Coax question for a receiving
only situation:

Regarding the Bury Flex you mentioned:

Don't know exactly how one quantifies this, but how "flexible" is it?
I would have a fair number of twists and turns if i install it.

Perhaps, minimum bend radius? How about for the LM 400 ?

Work fairly well at 1.5 GHz, or so, like the LM 400?

New at this, so let me ask a real dumb question-

Is it o.k. to solder one piece of coax to another piece, if one takes care
to try and spread the shield
from one to another, and solder these also?

Good idea to take care of the shields with some copper foil
around both of them, and then soldered?

Much thanks,
Bob

You should ask this questions on scanfan.com. This web site is for scanner hobbyists in the twin cities. Good site with good info. With more phones going digital, why pay for the extra freq's that you can't hear? I looked at both these radios but decided not to get either. Not the greatest on HF so why pay for that. What is your target listening area? That should be your deciding factor when looking for a scanner/receiver. If alpha tags are important then stick with those radios that offer it. Good luck.

Because it's true. Did you watch the news and see the
priest/headmaster of Seton Hall High School get busted
for soliciting child prostitutes in Toronto? The Toronto
police force set up a sting operation during the Catholic
Youth Rally/Pope Visit to see if they could catch some
child molesters & pedophiles. They had young boys and
girls walk the streets near the hotel where a lot of the
priests were staying. It is amazing that with all the recent
events with pedophile priests, the Popes visit and the
news coverage of the event, the pedophile priests were
still stalking children. The Priesthood of the Catholic
Church in North America has been a safe haven for these
perverts. The pedophiles have been protected for years and
it looks like they need to continue cleaning house. Cardinal
Law should be charged in the court of law for his actions.

I have the ICOM IC-R2, VR-120, VR-500, and
other radios and reviewed them (and the Alinco
and AOR models) in Monitoring Times.

Sounds like you want something cheap, small,
and a radio which you can use until you replace
it with a more expensive APCO-capable scanner.

The ICOM IC-R2 and Yaesu VR-120 fit that niche and
have better audio than the Alinco models I tested.

The IC-R2 has CTCSS (valuable in a dense RF environment)
and comes with NiCds and wall charger.
There are at least 2 commercial and a few free (as in price) cloning
programs available for the IC-R2.

The VR-120 has alpha display labels, "real" volume
and squelch control knobs, more channels, larger display, and
better AM BCB reception due to its interal
bar antenna. It uses a BNC antenna jack
instead of a small SMA style jack (I prefer BNC).
It scans combinations of memory banks, whereas the IC-R2
can only scan a single bank or ALL banks.

As a disadvantage, VR-120 has more frequency gaps than the IC-R2,
though they are both wide coverage radios.

Here's some good news.
The Yaesu VR-120 is being replaced by the VR-120D,
which is the same radio but with an addtional side
mounted external power jack.
HRO (hamradio.com) and AES (aesham.com) are
closing out the original VR-120 for $109 and this is a great
price.

I bought a VR-120 from HRO because they ship free,
i.e., $109 bottom line cost.

I wrote tk120, which is free, multiplatform graphical
software for the VR-120
(see Aug 2002 Monitoring Times for a writeup).

See http://parnass.com for free, open source software
for the VR-120, VR-500, IC-R75, IC-R8500, NRD-545 and other radios.
(I don't warrant the software, but it will cost your nothing.)

There are Yahoo discussion groups devoted to most of these models.
Check 'em out -- lots of good info:

http://groups.yahoo.com/group/VR-120
http://groups.yahoo.com/group/YAESUVR120
http://groups.yahoo.com/group/YaesuVR-120

Monty, or whatever your name is....

It's been fun playing with you, but now I must take my toys and leave this sandbox.

Your diatribe below speaks volumes about you, and will be left as the final chapter here as far as I'm concerned.

Dan Conti <- real name

It's better to put 2 connectors on the cables and use a nipple to
connect them. More likely to get a better impedance match that way, and
more likely to be stronger mechanically. And, probably easier than
soldering.

Hi, I got my DJ-X3T from Lentini Communications (21 Garfield St. Newington, CT 06111).

This Wide Band Receiver cost me $ 209.95, Of course I sent a money order in U.S. funds of about $ 230.00.

They did give me a problem on delivering to Canada, But I did point out in their ad in Popular Communications Magazine for the month of May 2002, That it don't say not shipping orders to Canada, The owner of Lentini was very nice to me.

But i'm happy with the service,

Thank-You

1264. Wanted antenna+ preamp suggestions

Newsgroup: rec.radio.scanner
Date: 2002-07-31 22:30:59 UTC
From: Barun Gupta <barun@worldnet.att.net>
Message-ID: <DyZ19.13025$pg2.1048237@bgtnsc05-news.ops.worldnet.att.net>
Source record: 45204

I have a Sony SC1 scanner which as you know can be switched to different modes (NFM, WFM, AM) in any band. Since it covers the 225 - 400 MHz band and can be switched to NFM mode, I would like to try and listen to FLTSATCOM satellites.

a) My first question is what would you recommend as an antenna and a preamp (I've heard that you need a preamp to listen to some of these sats)? Price is always a consideration but if you can give me options that work I'm sure I can find the prices for new/used antennas or preamps.

b) My second question is whether there are any other sats that I can listen to. I'm not interested in the WX sats, so anything other than that and using a freq below 1300 MHz.

If the VR-120 has the same amplifier that the 500 does, than the R2 has the
advantage there.
I have both the R2 and VR500. The R2 is MUCH louder...

I'm just the opposite. I will not use eBay, period. But I have bought
quite a few items theu the newsgroups on UseNet, even sold one or two
things. I've only been burned once, out of more than 30 purchases here
- bu a scumbag in Alaska who sold the same stick of SDRAM to several
people and never shipped it to anyone.

> I've also found that buying on eBay is far CHEAPER than purchasing used
> equipment from the OnLine ham shops such as AES, Universal, and others

You "seen one"? And who decided it was in "excellent condition"? The
seller?

> Now, how can you say the you get screwed by shopping and buying on eBay.
> If you get screwed you only did it to yourself.....

Or some shill bidder does it for you. Agreed, you would have to be
able to resist the "I gotta have that!" impulse. But I'd rather deal
direct with the seller, like I can here.

Stuff like this goes on wherever George Fetter rears his ugly personality. I have to agree with those who see his shennanigans.
Disagree with him and he will convert the argument into a personal attack, just as he did to Glenn here. [There was no reason to introduce the subject of Dan Morisseau or Taxes.]. I think it is to scare off others from disagreeing with him.

Glenn posted:
>Your claims about the

>Billy

In the flat state of Florida you certainly do not need a beam to snag comms from an acft 200 miles away. From my perch here on the FL East Coast, every day I snag the NASA T-38s when they are out quite a bit over the Gulf of Mexico. And it is not just that they are using high quality NASA radios because I hear airliners their on approach to TPA as well.
The antenna? A Radio Shack center-loaded whip on one of my Pro-43s.

With you and George hearing all these acft out in the offshore Whiskey Areas, how come I am the only one posting them on flacom@yahoogroups.com, cflg@yahoogroups.com, and BrevardRadio@yahoogroups.com?
Ya gotta feed the cow if you want to milk it.

Here is site and I'm wondering best spot to cut the height down of
this 36 inch antenna on top of my roof to fit in my garage without
taking it apart halfway at allen screwed coil. It can be cut and
screwed on in about 4 spaces if you look. Where is the best spot.

Oh I've feed the cow but you've turned the milk sour.

I post when I get a chance.

But this is a strange post coming from you, the man who claims to be using "ANTENNAS: About three dozen, including NilJon HD WB Omni, two Max Systems Ground Planes (cut to 225MHz), Scantennas, Grove Beams, Discones, Radio Shack 20-042 Omnis (like Scantennas), two Informant mag-mount whips, Larsen PO 150 whip, Commercial grade FM beam, etc, many on my 45-foot Rohn tower; and Radio Shack center-loaded whips and Bearcat AT002 window-mount antennas for handhelds. Also ample use of in-line amplifiers."

But the last time I was in your area all I saw was a vertical and a Scantenna..... What happened to the Scantennas (Pleural), Grove Beams (again pleural), Discones (once again pleural) but all I way was One Scantenna and one vertical.... Where is the rest, out for cleaning?

BTW to others interested in this thread which started off being about outdoor antennas, two days a go I just got a Create Log-Periodic and got it up. Right now I'm doing some comparisons between that and the Scanner Beam. Last week I put up a Scantenna, I will say that blows any discone I've ever had away....no comparison there. If anyone is looking for a very fine omni-directional the Scantenna is great.

At first glance it appears the Log-Perodic has much deeper nulls on the sides and rear than the Scanner Beam has (both mounted at 28' on rotors) and greater frontal gain. However the Scanner Beam has frontal gain which is very near that of the Log-Perodic. On a BC 780 XLT there is never more than 1 bar difference in signal strength between the two antenna aimed at the same target....

I took my Bury Flex and was able to twist it into a rough circle with an 8" diameter without forcing it. It is fairly stiff. I don't know about the LM 400, although with an O.D. of 0.405", it is probably somewhat stiff as well. You could e-mail either Davis RF or the Wireman and ask them.

>
>Work fairly well at 1.5 GHz, or so, like the LM 400?

I haven't used it at UHF frequencies, although I would personally try it. I suggest that you post a question on the rec.radio.amateur.space newsgroup. Someone who uses 2.4 GHz for communications with AO40 will have some opinions rooted in experience.

As Walt states in another response, it's probably better (both electrically and mechanically) to solder connectors to the two pieces of coax. It does create another spot for water to get in and corrosion to occur, so I would try to avoid it if possible, unless I could protect the connection from the weather. You can buy coax seal to wrap around any connections that are exposed.

With the way you blasted George the other week when he posted about
the F15 using a 138 MHZ freq. You blasted his log saying those F15s
didn't have VHF radios.

After doing some reasearch and searching some archives on the MilCom
list it appears this was an arguement on there. It was concluded
that FANGS do have VHF as some of the F15s came from another base
where they were fitted with VHFs. When people tell other people that
they didn't hear what they did hear why bother posting logs? That
one of the reasons I don't post loggings.

Billy

I had a couple of these antennas in the past. Work well for scanning. If you want to reduce the length, simply use your allen wrench and remove one of the coils and the center length of stainless. Connect one of the coils to the bottom part of the antenna and connect the top stinger to it. In other words, remove one coil and you'll still have an effective scanner antenna. Later, if you want it full length again, just put the other coil & center part back on, and it's as good as new without doing any cutting. I know you said you don't want to take it apart, but it's probably your best bet, depending on how much you need to reduce the length by.

It's been a while since I've taken a look at one of these, so I think you have to use the bottom coil as the bottom hole is bigger for the bottom stainless steel part of the antenna. Don't remember exactly though. Just attach the top stinger to the top of that coil. Tighten the allen screws and you're in business.

Yes, the VR-120 receives FM broadcasters, too.

It tunes 0.1 - 1300 MHz with these gaps (MHz):

339 - 340
351 - 352
372 - 373
384 - 385
396 - 397
482 - 483
496 - 497
504 - 505
511 - 512
542 - 549
558 - 572
605 - 615
620 - 630
784 - 798
807 - 820
824 - 849
869 - 894

I agree that the IC-R2's audio puts the VR-500 audio to shame.

Luckily Yaesu improved the VR-120 audio significantly -- much better
than my VR-500's anemic audio.

frequency table id for itself in that range.
I also thought the top most element was for VHF low and in our area

only 2 broadcast on it I care to listen so not a gigantic loss. I will give your thoughts a try. Thanks again. Nick

1294. Regency MR-8A Manual

Newsgroup: rec.radio.scanner
Date: 2002-08-01 23:49:32 UTC
From: kd1my_2000@yahoo.com
Message-ID: <c0f5dcc.0208011549.2e07941f@posting.google.com>
Source record: 45233

Does anyone know where I can get a operations manual for a Regency MR-8A scanner? It is an older model but is in good shape. Has 8 channels with lights and square push buttons above them. I believe it is programmable but have no idea how to do it. I can see no crystal sockets inside it. Any help will be appreciated. Thank you for reading this.

1295. Re: What's wrong with Radio Shack

I do believe this to be true. I was in Bellingham Washington at a R/S and asked them for a key chain remote for my R/S car alarm. The guy took one look at it and said, "did you get this in Canada". I said, "yep". He said, "can't help you we are different companies". Just another piece to this. I was at one of the ham shops today talking to one of the owners and he said that R/S has decided to drop all of the Ham, CB and scanner stuff because of no sales across Canada. They are just selling off the stock in the Warehouses then you will have to order all that stuff from the US with all the blocked frequencies and fixed repeter offsets.

I don't think that antenna is that frequency-specific. However, you'll have
good results with it shortened as you would with it at full length.

Dear All,

First of all, I want to thank the people who sent me ideas,
suggestions, comments or simply words of support.
Thanks to you guys, here is version II of IP1k. You'll see that it is
still very much a work in progress, but some nice features have been
added since last time, so I thought that would deserve an update.

Some of the new things you might enjoy the most :
- Keypad for easy tuning.
- Tuning knob for fun tuning.
- Memory presets to save your important frequencies.
- A different GUI using tabs, so we have more room to play.

You can download the zip file here :
http://w1.316.telia.com/~u31626584/dl/index.html

Many thanks to Patrik in Sweden for letting us use his web page :-)

As always the source code is included, so I encourage you to
experiment and add your own features.
I would appreciate your questions, comments, suggestions...
Let's share our code.

JJ in Tokyo, Japan.

One has to appreciate it as entertainment. About 20 years ago I was in a
Radio Shack store in a mall in western Pennsylvania. A lady wished to buy a
TV antenna. As the location was rather far from the area TV stations, she
needed good separate VHF and UHF TV antennas. She asked which one should be
on top on the antenna mast. The salesperson told her the VHF should be on
top as UHF had shorter wavelength and therefore could not reach as high
above the ground

1303. FRS radio range?

I'm thinking about getting a pair of FRS radios and see them advertised as "up to" 2 mile range. What's a realistic range outdoors, in the mall, house to house in the neighborhood, etc.?

I also see another kind- I forget the initials- that advertise a 5 mile range for not much more money, though you need to get a license. Are they better- do they really reach further, is the test hard to pass?

Hoss

I have no practical experience with FRS, so I'll leave that question to others to answer. The "other kind" you're talking about is "GMRS". More power is permitted in these so you get more range. And yes, you do need a license. There is no test but there is a fee ($75.00 per 5 years?). The two services share some channels. There are some sites devoted to FRS and GMRS. Look for them for more info.

In most conditions, the range is less than a mile. The other type you saw
was GMRS (General Mobile Radio Service). A big advantage to GMRS is the fact
that with GMRS you can use an external antenna so you can get really far
out. The test is easy.......

1307. Scanner Beam and Scantenna question

Newsgroup: rec.radio.scanner
Date: 2002-08-02 13:39:29 UTC

Source record: 45147

I want to get the gain of a beam but also want to hear in all directions. The problem I am having is when I use the scanner beam I hear great where I'm pointed however then I miss calls to the back of the beam. I have my beam pointed at some distant weak stations that I can not receive very well on the Scantenna.

My question is this. Is it possible to hook both the beam and the Scantenna to the same scanner using a T-connector? Will I loose any gain in the beams forward direction? My goal is to still receive the weak distant stations where the beam is pointed but still hear the other stations to the back.

The beam I'm using is a log style antenna I picked up at a hamfast. It has about a 4' boom and the longest element is about 4' and is for 105 to 1300 MHz. It does a great job but seems to have some rejection to the back. Its this rejection that I would like to elimiate by using the T-Connector and Scantenna idea.

Any thoughts?

Roger

1308. A few questions!

Newsgroup: rec.radio.scanner
Date: 2002-08-02 15:01:49 UTC

Message-ID: <829a87fd.0208020701.2456219e@posting.google.com>
Source record: 45148

I found this one channel on 454.300MHz. Day and night I always have an image(my scanner stops), but its just a high pitched whistle. Every 10 seconds or so I hear digital beeping and buzzing and static then back to the whistleeeee.
What is this?

Also, how come sometimes in the fire dispatch channels around 46.00 I hear strange humming which even if I turn squelch to the highest it can go, the humming is still there.

And what are thoes horizontal antennas on fire and EMS building? I see them sometimes on towers too. The radiating little antennas are sticking up and down and the actual poll is supported on its side (u get the picture)

Thanks
Dave

1309. pro-39 scanner keypad

Hello,
Some of my buttons on my scanner are not working. I had stored it for last 5 years in the closet. Anyone who have had success fixing it please reply. Is it better to replace the entire keypad than cleaning it? Thanks in advance.

1310. I need an opinion and/or review of the YUUPITERU MVT-7300

Newsgroup: rec.radio.scanner
Date: 2002-08-02 15:34:55 UTC
From: Trond <trond@false.es>
Message-ID: <zEx29.548760$uo6.5069232@telenews.teleline.es>
Source record: 45150
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,fido.shortwave,rec.radio.scanner,rec.radio.shortwave

Hello,

Is better the YUPITERU MVT-7300 than the YUPITERU MVT-7100?

I know that the audio in the MVT-7300 is worse than in the MVT-7100, and that covers only from 530 KHz (100 KHz nonguaranteed) to 1350 MHz.

Are worse also sensitivity, selectivity and interference rejection, that in the MVT-7100?

I mainly need scanner for HF, and in second place, but without being less important, the aerial band, police, ambulances etc. in VHF. I prefer to sacrifice a bit the VHF in order to have better sensitivity in HF, but not much. I know that it is much to request, but I know that the MVT-7100 has a quite good balance, for that reason it wanted to know if the MVT-7300 is better than the MVT-7100, or at least has inherited the specs of its brother MVT-7100.

Many thanks to all, and sorry for my english, is very bad ;-)

Trond

Amateur Radio Newsline™ Report 1303 August 2nd, 2002

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the website front page.

==========

Amateur Radio Newsline report number 1303 with a release date of Friday, August 2nd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio may be headed to Mars. That’s right. We said the red planet Mars! Find out how on Amateur Radio Newsline report number 1303 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: WE ARE GOING TO MARS

Ham radio could be headed to the Red Planet in a few years. This as the German ham radio space agency announces some ambitious plans for future Amateur Radio operations from outside the Earth’s atmosphere. CQ Magazine Editor Rich Moseson, W2VU has the details:

--

AMSAT-DL the German amateur radio satellite organization has announced plans to build two new amateur spacecraft, including one destined for orbit around Mars! Now, the AMSAT News Service, says that the so-called Phase 5-A satellite could be launched in the 2007 to 2009 timeframe and that it will include subpayloads that would be launched from the main satellite,

either to the planet's surface or into the Martian atmosphere.

These devices would transmit scientific data back to the "mother ship." It would then use a repeater to relay the information back to hams on Earth. AMSAT-DL officials say that the 2000 launch of AMSAT-OSCAR 40 showed that the basic satellite design was capable of a trip to Mars.

The AMSAT-DL board of directors has also given a green light to developing a Phase 3-E earth-orbiting satellite. This would be a more traditional amateur bird, offering two-way communication links on amateur bands between 145 MHz and 10 GHz. In addition, it will serve as a testbed for some of the technology needed for the Mars mission.

AMSAT-DL has been the lead AMSAT group on the past three large amateur satellites placed into orbit. This includes AMSAT-OSCAR-10 which is still operating, AMSAT-OSCAR-13 which is no longer in orbit and AMSAT-OSCAR-40.

For the Amateur Radio Newsline, I’m Rich Moseson, W2VU.

--

No launch timetable has been announced for Phase 3 E, but it is expected to be several years before the anticipated launch of the mission to Mars.

information about both missions can be found at:
http://www.amsat-dl.org/p3e/towards-p3e.pdf and
http://www.amsat-dl.org/p5a/p5a-to-mars.pdf (ANS, CQ)

**

RESCUE RADIO: JULY 4th WATER RESCUE ACCOMPLISHED THROUGH HAM RADIO

Its ham radio to the rescue on Thursday, July 4th. This following a water accident involving a teenage girl on Utah’s Lake Powell. Roy Neal, K6DUE has the details:

--

STEVE WILLIAMS, K0SRW, REPORTS THAT A TEENAGER . WHO SHALL HERE GO UNNAMED BECAUSE OF HER AGE, WAS RIDING A TUBE BEHIND A RENTED SKI BOAT. THEY WERE GOING FAST UNTIL SHE HIT A WAVE AND SUDDENLY…UNEXPECTEDLY…WENT AIRBORNE. THAT’S USUALLY LOTS OF FUN FOR KIDS BUT THIS TIME THE YOUNG GIRL LANDED THE WRONG WAY. HER NECK HURT. SHE COULD HARDLY MOVE HER NECK AND BACK.

WILLIAMS WANTED TO CALL FOR HELP BUT THE ACCIDENT TOOK PLACE ON LAKE POWELL, WHICH IS A HUGE PLACE…186 MILES LONG WITH ALMOST 2 THOUSAND MILES OF SHORELINE. MAJOR CANYONS, 96 OF THEM, SOME 15 TO 20 MILES LONG, RISE UP BEHIND THE SHORE.

A MARINE RADIO CAME WITH THE HOUSEBOAT THAT WILLIAMS RENTED BUT THEY WERE TOO FAR OUT TO MAKE CONTACT. CELLULAR TELEPHONES ARE ALMOST NON EXISTENT IN THE TERRITORY. SO K0SRW TURNED TO HAM RADIO. WILLIAMS HAD A YAESU 900 AND OUTBACKER ANTENNA ALREADY SET UP. ON 20 METERS, HE HEARD W8VRT, LEN KERSCH, IN ANN ARBOR, MICHIGAN, SEVERAL HUNDRED MILES AWAY.

KERSCH WAS TAKING PART IN A NET, ON 14.178 Mhz. WILLIAMS BROKE IN, EXPLAINED THE SITUATION AND GAVE A PHONE NUMBER FOR THE BULLFROG MARINA, AT LAKE POWELL. KERSH CALLED THE MARINA. THEY CONNECTED HIM WITH THE NATIONAL PARK SERVICE. ANOTHER WILLIAMS…KARL WILLIAMS, KD5AW, IN OKLAHOMA CITY BROKE IN TO ASSIST BY RELAYING INFORMATION BETWEEN W8VRT AND K0SRW.

ABOUT 25 MINUTES AFTER THE INITIAL CONTACT, A MEDICAL HELICOPTER AND A NATIONAL PARK SERVICE BOAT ARRIVED. THEY DECIDED TO AIRLIFT THE GIRL BY HELICOPTER TO A HOSPITAL AT GRAND JUNCTION, COLORADO. STRANGE TO RELATE, THE PILOT ALSO WAS A HAM…TOM CALDWELL, KC7BPK, WAS AT THE CONTROLS.

THERE WAS NO ROOM FOR THE PARENTS IN THE HELICOPTER. THEY TOOK OFF TO TRAVEL SOME 4 HOURS BY BOAT AND CAR. AS THEY DROVE AND GOT BACK INTO CELL PHONE RANGE, GOOD NEWS WAS WAITING FOR THE ANXIOUS PARENTS. X-RAYS SHOWED THEIR DAUGHTER WAS NORMAL…NO PERMANENT INJURIES. THIS HAM RADIO RESCUE STORY HAD A HAPPY ENDING.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

Williams says he is grateful to all of the hams who assisted in the rescue. Because of them an injured youngster quickly received medical aid in a rather remote part of the USA. (K0SRW)

**

RESCUE RADIO: HAMS READY FOR WASHINGTON TRAIN DERAILMENT

Ham radio was ready but not really needed at a July 29th train derailment just outside of Washington D-C. An AMTRAK liner was enroute from Chicago to Washington when many of the passenger cars left the track near Kensington, Maryland. About 90 people were taken to area hospitals, three reported in critical condition. One news report said that a ham radio communications team was on its way to supply assistance but with no real communications failure, their services were found to be unnecessary. The news story did not mention anyone by name or call sign. (ARNewsline™ from news reports)

**

RADIO LAW: QCWA FILES IN FAVOR OF NEW HAM BANDS BUT SOME MEMBERS SAY THEY SHOULD HAVE BEEN ASKED

The Quarter Century Wireless Association has filed in favor of the ARRL proposal to create new ham radio bands. While most members of the QCWA appear to agree with the FCC filing, there is one group that is taking the Board of Directors to task over how it was done.

Its not because they disagree with the content. Rather, calling themselves the “vocal minority,” these hams are using the QCWA electronic remailer to complain that the board did not send paper or electronic copies of the proposed filing to all members. Also, they say that the board did not individually poll the members for their opinions before writing the QCWA position and sending the paperwork to the FCC.

But outgoing QCWA President Gary Harrison, K0BC, says that the reason it was done this way is simple. It was a matter of time.

In a posting to the QCWA Reflector, Harrison says that there was a limited amount of time to file comments. He also notes that there are only about 300 QCWA members are on the groups electronic mail list. That would mean preparing a paper mailing, sending it out and waiting for members to write back.

Harrison uses QCWA election figures as an example. He says that it takes about two years to complete an election cycle and the organization receives only about 30% return of the ballot. The cost of mailing material out for this election is about $2,000.

What about the organization's magazine called the QCWA Journal? Harrison says that it takes two months to prepare and mail it from the deadline for submitting articles. And be it a paper ballot or an announcement in the Journal, the QCWA would have to allow several months to permit input from the membership. In this case waiting would mean that the QCWA could not file because the commentary cutoff date had passed. (ARNewsline™)

(5 sec pause here)

**

CHANGING OF THE GUARD: STEVE MANSFIELD, N1MZA – S.K.

Some rather sad news to report – especially for us here at Newsline. It comes in word from the American Radio Relay League that its Legislative and Public Affairs Manager Steve Mansfield, N1MZA, has died of complications to brain cancer at age 55.

Steve Mansfield came to ARRL service in 1991 as an expert in the area of Public Relations. It did not take long for his bosses at League headquarters to realize his enormous potential as a people person. As a result, the hallowed halls of Washington D.C. soon became his beat and he spent the next eleven years as the point man between the ARRL and numerous political leaders.

ARRL President Emeritus George Wilson, W4OYI, had the opportunity to work with Mansfield. He tells Amateur Radio Newsline that he recalls one incident just before a major convention out in California. There were a lot of very controversial issues on which the League had taken considerable heat. Wilson gave Mansfield the job of searching out all issues and prepare a short "position paper" on each for W4OYI. The former ARRL president says that Mansfield did such an outstanding job that he had copies sent to all Directors and Vice Directors. The result was what

President Wilson called tons of favorable comments, and a real tribute to the dedication of N1MZA.

Mansfield was also seen at many hamfests and conventions. In most cases speaking at public relations sessions hosted either by the ARRL or by us here at Newsline. And that's really where we got to know him as a friend, a college and as an expert in the topic of relating to other people.

Steve Mansfield was first diagnosed with brain cancer in 2000 and had surgery to remove the malignancy. He was doing well until recently when he suffered a series of setbacks. He passed away on Monday July 29th. He is survived by his wife Ellyn daughters Ramona and Elizabeth and the friends he made in and out of ham radio, worldwide. (ARRL, W4OYI, ARNewsline™)

**

CHANGING OF THE GUARD: FATHER MIKE MULLEN, WB2GQW – S.K.

The Reverend Michael Mullen, WB2GQW, a past winner of the ARRL International Humanitarian Award, became a Silent Key in June. "Father Mike" was a professor and past chairman of the humanities department at St. John's University in New York. He was best known in amateur radio for his involvement with IMRA, the International Mission Radio Association. IMRA maintaines lines of communication using amateur radio for missionaries. It also inter-connects various humanitarian agencies over the air after disasters.

According to the New York Daily News, in addition to his ARRL International Humanitarian Award, Father Mike received the St. John's University Presidential Medal and was listed in the
international edition of "Who's Who in Education." He was 87 at the time
of
his death. (CQ, NY Daily News)

**

NAMES IN THE NEWS: A NEW BOOK BY N6NHG

Former computer hacker Kevin Mitnick, N6NHG, has turned author. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Kevin Mitnick, N6NHG, Mitnick is the California ham whose license renewal application has been designated for hearing by the FCC. This, based on his conviction for hacking. And now according to news reports, he has written a soon to be released book on computer hacking and -- more important -- how to prevent being hacked.

According to the reports, Mitnick's book -- The Art of Deception -- is a novel that describes more than a dozen scenarios where hackers dupe computer network administrators into divulging passwords, encryption keys and other security details. Mitnick claims that its all fiction with any personal details having been kept out of the book which reportedly uses

fictitious names of hackers, victims and companies.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Earlier this year the FCC designated his application to renew his Amateur licenses for a public hearing. The FCC contends that Mitnick may no longer possess the requisite requirements to remain a Commission licensee. (Published reports)

**

CONVENTIONS: HUNTSVILLE HAMFEST

Two conventions on almost opposite sides of the country are taking place the weekend of the 17th and 18th of August. In Huntsville Alabama, the Huntsville Hamfest takes place at the Von Braun Center's South Hall right across the street from the Huntsville Hilton Hotel. Since the first Huntsville Hamfest in 1981, this event has grown to the point where the Amateur Radio manufacturers and dealers consider it to be one of the seven major hamfests in the country, pulling a gate of between 5000 to 6000 every year.

We at Amateur Radio Newsline have presented our own Young Ham of the Year Award at the Huntsville Hamfest since 1993. 2002 is no exception. So please join us at 2:00 P.M. Central time on Saturday August 17th as we, our corporate underwriters Vertex Standard and CQ Magazine along with the people of Huntsville honor 17 year of Josh Abramowicz, KB3GWY as the 2002 Amateur Radio Newsline Young Ham of the Year. More information about the Huntsville Hamfest is in cyberspace at www.hamfest.org. (Huntsville Hamfest)

**

CONVENTIONS: ARRL SW DIVISION IN SAN DIEGO

And August 16th to the 18th will se the ARRL Southwestern Division show at the California Center of the Arts in Escondido. The scheduled Banquet speaker will be Riley Hollingsworth K4ZDH. Also on hand will be ARRL President Jim Haynie W5JBP, Big Project Coordinator Jerry Hill, along with Division Director Art Goddard W6XD, and Vice Director Tuck Miller NZ6T. More information is on the convention web site at http://sd2002.hamcon.net. (HAM-CON)

**

CONVENTIONS: HUNTINGTON HAMFEST

And a week earlier on August 10th, the Tri State Amateur Radio Association will host the Huntington, West Virginia Hamfest. Its at the Veterans Memorial Field House, 2590 Fifth Avenue in Huntington from 8:30 AM to 2:30 P-M. Talk in on the 146.76 repeater and V-E administered ham radio exams will also be available. For further information contact Phil Beckett by e-mail- to ab8me@hotmail.com (N8TMW)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only September is canceled. There will be a TRW Swap Meet the last Saturday of the month in August and in October, November and December.

The TRW Swap Meet is famous and draws attendance from across the nation. For more information visit http://w6trw.com on the world wide web. (Via e-mail from TRW A.R.C.)

**

SCIENCE PAGE: THE MAGNETIC NORTH POLE IS ON THE MOVE

The Magnetic North Pole could soon abandon Canada, migrate north of Alaska and eventually wind up in Russia. So says one scientist. Amateur Radio Newsline's Bill Pasternak, WA6ITF, reports on the future of the pole.

--

The e-newsletter Science Today tells of Larry Newitt. Newitt is a researcher with the Geological Survey of Canada. And Newitt says that the magnetic pole is on the move.

The researcher says that the pole, which has steadily drifted for decades, has picked up speed in recent years. He says that at its current speed, it could exit Canadian territory as soon as 2004. And, says Newitt, if the pole follows its present course, it will pass north of Alaska and arrive in Siberia in a half century.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, Los Angeles.

--

If you are worried that you may soon have to trade in your old compass for a G-P-S to know where you are, don't. Researcher Newitt cautions that such predictions could be wrong. (Science Today)

**

INTERNATIONAL - BRAZIL: A NEW LF BAND ON ITS WAY

According to Brazilian amateur PY3CRX the Brazilian licensing authority, ANATEL, has agreed that the 135.7 to 137.8kHz band can be allocated to radio amateurs in that nation on a secondary basis. No date was mentioned for the new band's introduction but PY3CRX adds that the band is, or will be, also available in Paraguay and Uruguay as well. (GB2RS)

**

INTERNATIONAL- CANADA: VY2BP NEW RAC AD

Radio Amateurs of Canada reports that Bill Perry, VY2BP, has been appointed as an Assistant Director for the R-A-C Atlantic Region. Perry will complete the unexpired term of Fred Burke, VY2FB, who recently resigned the position because of family commitments. (RAC)

**

INTERNATIONAL EAST TIMOR: NEW CALL SIGN BLOCK ANNOUNCED

The International Telecommunications Union says that the 4WA to 4WZ prefix block will go to the United Nations Territory Administration of East Timor for as long as it exists. United Nations stations within East Timor will be assigned 4U prefixes. The official U N Club station will get 4U1ET. All other amateurs will use the 4W6 prefix. Those residing in East Timor less than one year will sign 4W6 followed by their home call. People staying beyond one year will be assigned a permanent 4W6 call. And yes, CEPT licenses are accepted. (GB2RS, Q-News)

**

DX

In D-X, the UK-lead youngsters' DXpedition to the Maldives should be on the air as 8Q7ZZ until the 11th of August. The expedition is being lead by 18-year old Mark Haynes, M0DXR. Other operators include 15-year old Robert Morgan, M0TTT, as well as young amateurs from Germany and Spain. 8Q7ZZ will be running up to three stations simultaneously, all with beam antennas and up to 400 watts power out. (RSGB)

Meantime, four French operators are in Benin and active as TY7Z, TY9F, TY4DX and TY6FB until the 14th of August. If you make contact with either operation Q-S-L as directed on the air. (QRZ DX)

**

THAT FINAL ITEM: A SPECIAL HAM RADIO PRESENTATION

And finally this week:
--
“Good afternoon to everybody here. We have a lot of Amateur Radio operators and we have a lot of guests aboard the Queen Mary. And we are here for a very short ceremony to commemorate the 23rd anniversary of W6RO.”

--

That was Bob Heil, K9EID, on Saturday, July 27th, talking to a crowd assembled in the Wireless Museum next door to the Queen Mary's radio room. A radio room that for the past 23 years has been the home of Amateur Radio Station W6RO. And to commemorate this milestone, Bob's company, Heil Sound, donated a half dozen custom made Classic series microphones adorned with the W6RO call sign to the station. These retro look microphones are very similar to the RCA studio mic's of the 1930's. Famed rock musician Joe Walsh, WB6ACU, had the honor of making the actual presentation:

--

Joe Walsh: "These Classic microphones are presented to the Queen Mary amateur Radio Station, W6RO, celebrating the 23rd year of continuous operation provided by the Associated Radio Amateurs of Long Beach California, present by Bob Heil, K9EID, and Joe Walsh, WB6ACU, on July 27, 2002. And we wish you continued success with the station and here you go."

Nate Brigtman: "Thank you very much."

--

Accepting the mics was Nate Brightman, K6OSC, who was the man who conceived the idea of a ham station on the Queen Mary. He was accompanied b the current president of the club, Ray Rittenhouse, KF6WZN. Rittenhouse has a surprise for K9EID:

--
Ray Rittenhouse: "We appreciate this very much Bob, and from our club to you is a certificate of our appreciation thanking you for those microphones we are now putting in W6RO"
--

Then it was Nate Brightman's turn. He told the crowd a bit about the operation of W-6-R-O, and what those who sit at the transmitters get as a token of appreciation for taking the time to operate:

--
Brightman here: ""Those amateurs who come by to visit W6RO aboard the Queen Mary, should they operate the station, we will mail to them a special certificate designating that they had the honor of operating W6RO aboard the Queen Mary."
--

And when it was all over Bob Heil ended the presentation with a bit of a poem:

--
Heil: Nate. Thanks for having us today. And Ray, we appreciate all of your efforts for the club. And we will be seeing you a little high, a little low. But we'll find you somewhere from W6RO. (Applause)
--

Attending the ceremony, were numerous local ham radio operators from the Los Angeles area. This included Vertex-Standard's Chip Margelli, K7JA and film maker Dave Bell W6AQ. The ARRL was represented by Los Angeles Section Manager Phineas Icenbice, W6BF. You can hear the complete presentation as

this weeks Newsline Extra. You will find it as an MP3 file on our F-T-P page only a click away at www.arnewsline.org. (ARNewsline™)

> Is better the YUPITERU MVT-7300 than the YUPITERU MVT-7100?

7100 Is better, it should be it is dearer but I would say 3300 has the edge
on VHF and in my opinion capable of taking the knocks better.
>
> I know that the audio in the MVT-7300 is worse than in the MVT-7100, and

Audio is not bad at all on 3300

> that covers only from 530 KHz (100 KHz nonguaranteed) to 1350 MHz.
>
> Are worse also sensitivity, selectivity and interference rejection, that
in
> the MVT-7100?

Sensitivity is definitely not worse in my opinion, but as for the
selectivity and interference then the 7100 comes out tops.
>
> I mainly need scanner for HF, and in second place, but without being less

No question then, the 3300 is out of the race it does not cover HF
> important, the aerial band, police, ambulances etc. in VHF. I prefer to

In my opinion the 3300 is a very good scanner but for what you want go for
the 7100 See my review at www.ukmidlandscanner.co.uk

I being a "electronics tech" have a tale here. I too have a Pro 39. My keypad went south as well. I tried to get the
part(s) and was told they wouldn't sell them to me. I tried to get a repair manual, and was told no dice. I was told that the regional Radio Shack repair center couldn't even repair it. WHY? Due to the 800 MHz capability. The guy who told me, was usually pretty honest with me, so I had no reason to doubt it. He said ALL 800 MHz capable equipment had to shipped to Texas to the main facility to be repaired. SO, good luck on getting your's repaired.

There are "keypad" repair kits out there. Personally, I had no luck with them. So, lot's of luck!

Better yet, why don't YOU do a review and send it to him? I'd be willing to bet that he would publish it. Rich is
always looking for reader input. He's recently married, recently a dad, and doesn't have unlimited money. So,
since you have the antenna and an antenna tester, you are in a perfect position to do the review and send it to
him. I've done several for him and he's always been more than happy to use them on the site.

Low VSWR is hardly a test for an antenna- especially a directional one.
I have a precision 50 Ohm terminatuion here that looks awfully good through 6 GHz.

OK thanks for the remarks. When the aerial arrives here in Poland I will take it over to some amateur radio friends location, go into a field and compare the scanner beam to whatever other aerials we can find. Will be happy to submit a report to this group.

The above is not true. If they have a replacement keypad in stock, RS
will be more than happy to send you as many as you want! As far as
fixing it goes, they will fix it fine too. I guess the servicee manual
thing might be true, but I had no problems getting one after the supposed
ban on selling them for a PRO 43. I have bought about 30 keypads for
pro-43's over the years, I have fixed a ton of them. Just a few 39's
though..

Circuitry, hardware, and software is required for the digital decoding.
Some of the hardware is unique to the type of digital system being
decoded.

I assume they put this on a plug-in card so that they could supply cards
for various types of digital systems.

>

Around the neighborhood, perhaps around 1 mile... in a mall, maybe 1/4 to 1/2 mile... (any malls that big?). In hills, heavy trees, 1/2 mile would be best, probably much less if blocked by hill. If you can SEE the other station, you can probably talk to him, even if he's 75 miles away. I've talked on 440MHz using an HT with 1/10 watt to a repeater that was over 50 miles away. Admittedly, the repeater receiver has a nice high gain antenna on it, but then again, I was using a tenth of a watt.

The first sound could be a digital transmission, like a paging system. The tone would be the carrier, and the buzzing would be data. Also, it could be interference internally generated by the scanner. Someone could probably tell you what it is if you recorded it and posted a URL to the recording.

The humming could either be:
A) interference entering/generated at the audio amplifier
B) internally generated interference entering/generated at the rf stages, with a high enough strength to overcome the squelch.
C) an extremely strong signal or interference from something in the room or car. Try moving the scanner around the room and see if the sound changes.

Its probably A or B, but it could be C. Again, it might help if you posted a sound clip.

Oh, also what model of scanner do you have?

What is I'm to put up? I'm open about the equipment I have, I"m open about what I hear, I don't have anything to hide here. And I have several online businesses. How do you think I can afford to be at home monitoring during the day???

I don't understand why you would call me a crack pot, I never said the Scantenna wasn't a good omni-directional antenna. Or are you refering to my post regarding the Scanner beam receiving as well as a discone off its sides and back? Well I never said the Scanner Beam was an omni-directional antenna. In fact it was one of YOUR friends who wrote me telling me he thought the scanner beam received very well in all directions, it was after that email I decided to compaire a discone's preformance against the Scanner Beam.....

Have a nice day

As I understand it the card is only needed if you want to receive
digital comms. If you don't have any digital comms in your are that
you want to receive then I wouldn't think its needed. You can buy the
scanner without the card, in fact that's how its being advertised.

Thats the way I understand too. Some departments are trunked but not digital, however a few are going to be switching to digital in the coming years as is our metro area so if you want to be ready for the future then go with the 785 and buy the digital card when you need it sometime later. Perhaps you'll never need it. The digital system as I understand is quite pricey for smaller comunities plus they really don't have the need for such an elaborate communications system so depending where you are you may never need the digital capability and the BC780 will serve you well for a long long time.

1334. FS-Protek portable DSO

Newsgroup: rec.radio.scanner
Date: 2002-08-03 16:22:34 UTC
From: ka4993gg@aol.com
Message-ID: <20020803122234.02086.00001443@mb-fe.aol.com>
Source record: 45173

Portable digital storage oscilloscope, in EXCELLENT condition. Operated by "AA" batteries or AC adaptor included. Can also be hooked up to your PC with included computer interface. Comes with manual, 2 probes, batteries, zippered carrying case. Probes and scope are as new, unit was very seldom used.

Brand new price was $1200, but will sacrifice for $350, plus actual shipping charges from 94612. Pictures avail upon request.

The specifications for this scope is very similar to the current model P-3850, at Protek's website below. Its also identical in appearance to the P-3850 which sells for $1350.

Can't comment on the 7300, but for what it's worth, recently acquired a 7100
from the UK and cannot believe what a fine receiver this radio is.

Truly a gem in a crowded field of wide banded, "do it all" portbale
receivers, many of which are deaf as Kelsey's Nuts...

It was you who failed to provide any help by not answering the question
asked about the MVT-7300. I can not help him because I do not know about
it either, it's why I said "I would also like to know about it." Is that
too difficult for you to understand? Do you have to be rude and
ignorant? I will be charitable and assume you just had a bad day!

Bob,

An amazing difference in price between the initial 120 and "D" version, for really not much of an improvement at all.

At $109.00, (for the original 120) it's a steal IMHO.

Ask Motorola - they seem to think they deserve a royalty for providing Uniden the protocol and circuitry.

What nerve!

And Uniden actually thinks that they should earn a PROFIT from the sale of these cards - HAH!

Don't they know we scanner nuts not only want BIGGER and BADDER but also CHEAPER and FREE?

I mean really - the nerve of these companies actually wanting to make money - it makes me ill just to think of it. Who cares if they go bankrupt - the CONSUMER should be king...

Consider your options - you can pay Uniden $600 for the radio or you can pay Motorola $3000+ for an astro which requires $pecial hardware and $pecial $oftware to program (hmm. More money) Or you can buy..... oh wait - there isn't anything else out there is there? Bummer... I think Relm makes an APCO transceiver that doesn't trunk for about $800... there's a wise investment. LOL...

Of course you can buy nothing and complain about it all you want - that doesn't cost a dime! (And you do it so well too...)

Who's whining? Just wanted to know what the card was for and why it cost extra. Simple question and simply answered by every other poster who replied.

Too much time on your hands? Feel better now?

Motorola didn't come up with the protocol that make up the card. A company
called DVSI came up with the vocoder for IMBE which is part of the APCO25
Standard. Uniden and Motorola are required to pay a license fee to DVSI
to allow the IMBE vocoder into their products.

It is a uninformed buffoon's uniform. Happy now?

At least I spelled buffoon correctly.

1354. tk120 v0.5 software for Yaesu VR-120 available

Newsgroup: rec.radio.scanner
Date: 2002-08-04 01:30:11 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d4c83ad$0$3574$272ea4a1@news.execpc.com>
Source record: 45194
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk120 version 0.5 is now ready for free download.

tk120 is an open source programming utility for the
Yaesu VR-120 portable receiver.

It runs on Linux, Windows, and (perhaps) MacOS X.

Improvements in version 0.5 include:

(1) Dozens of new controls to configure the radio.
(2) The ability to link memory banks for scanning.
(3) VFO Settings are now in a separate window.
(4) Experimental controls permit access to a hidden "USER P"
menu.
(5) User will be warned and prevented from reading and writing
to the radio during the same session.
(6) New balloon help messages.
(7) New installation procedure is the same for Microsoft Windows XP
and older Windows versions.

You can learn about and download a beta test version of tk120
from my home page:

http://parnass.com

Thanks to Russell Hall, Gary Kinsman, and Torsten Grochowski for
testing tk120. Jim Vincent, KC7RYD, and others helped by
sending me image files from their VR-120s.

I don't warrant the software, though it will cost you nothing.

I think the word on the 5mile is G.M.R.S. FRS is UHF. It goes through
concrete well, but with limited range. Go with ham of something FRS is good
when close. Also pine trees love UHF RF.

I don't know that you really reflected the point of the original poster (surgema) - he says you didn't - but your remarks perfectly captured the attitude of so very many in our me first - me right now - me and only me forever society: "I want what I want, I want it NOW and I want someone else to pay for it !!!"

This rather silly selfishness posing as some bizarre kind of "consumer activism" bullstuff is reflected in the rather infantile populism inherent in so many newsgroup rants against manufacturers, retailers and even cottage industry software developers; to wit: "Send me the code/crack/whatever. I deserve to use the other guy's work for FREE !!"

Time for some of the neopopulist crybabies to grow up and pay their own way!

I just moved to Kansas City, Missouri from Atlanta, GA about two
years ago. Before departing, I bought a Uniden 148 mobile CB for my
P/U truck plus my Kenwood TH-742A Tri-Band (w/220MHz) went in
my P/U truck. And all the way they were both running as hard as my truck
was. I had a bit of a problem with my Uniden 148 recently so I took it into
R.S. to
get a repair, and while there I looked around and discovered a really nice
CB
rig with an attachment to tell me what direction I was going. That's really
nifty
because I rarely know what direction I'm going! Anyway, for a few $bucks
a bit over $100 I brought it home with me while waiting on my full-size
Uniden 48, SSB. I purchased the Uniden at a truck stop somewhere in
Arizona while I was riding around the country with my cousin in his rig.
It was a real gas to me. I can see why truckers all have radios in their
rigs. two main reasons I can see is to get local directions and keep
awake while driving their 14-plus hours a day.

Anyway, business if business. And if this is what R.S. has decided, it is
going to be an exceptional royal pain in everyone's electronics butt! And
you're most certainly right that when R.S. goes south on these items,
everyone may just as well give up most hobbies concerning radios or
electronics. You won't even be able to buy a resister or capacitor.

A great list John. Must say you have a wide variety of freqs. Must
say though, the Holy Cross Cemetary frequency (151.07 Mhz) seems kinda
dead :-)

Will add to your info the OPP and Fish and Game out of Brighton
Ontario. (Not that I ever shoot more ducks than allowed or
anything.....)

bill,

who the fuck are you talking to .. you piece of shit?

but to answer your question .. i want the company
to crash because it's another company without assets,
that goes public, whose stock is bought and sold by the
same companies that place them in investments for
the middle class (ira's, etc.), THEN those same companies
take their share out in REAL companies with REAL
assets, (IBM, GM, GE etc.) then when everybody figures it out, the
asset-less company (like enron, global crossing etc.) is worth jack
shit because there was nothing there in the first place but
every bodies used shit. now take that to the bank ... because
it's doomed. did you know that 98% of all enron stocks were
sold to the retirement funds of municipal workers, teachers,
police unions during the last nine months of its existence??
do you think that the major hitters on wall street didn't see
it coming? bullshit ... they tipped each other off (including the vp
of the usa). now they have our money and we have their
bankrupt investment accounts.

eat shit and die you simple fuck

monty

Hi David Monroe in Canada,I have the most special of all 2006's awaiting to grace your mailbox.

Features:Case with no Plastic (totally redone with x-ray proof whimsidookle for shipping of highly explosive parts)

LCD Display has been modified for direct injection of Hydrochloric acid directly to your face.(Only activated if you tell a lie)

Power Modification has been all done,you can attach it directly to your balls for the most intense scanning you have ever seen.

Ah yes and the most of the most of mods.....The DELAY. Delay has been totally redone.I'm so excited ,the delay has been arranged so that when you sit for x amounts of minutes in front of this glorious rig,scanning,ripping people off,sending bogus newsgroup ripoff messages,it senses your tenseness and automatically redirects your computer to the nearest frapping site on the internet...

And for you David what does this all cost,for you I think it should be free,yes even with all these fantastic mods that have been included,you pay nothing....kinda goes along with what you are - don't ya think??

I endeavoured to guide you to the correct path, it seems that you resent
your mistake and need to blame someone else for it.

>I spend hours helping people new to scanning yet you have to pick
>fault, I thought I answered the questions ok

How can you still think that you answered the question "OK" when your
mistake has been pointed out to you, are you unable to accept that you
are not perfect.

>but maybe you are just plain too thick to understand, so I apologise
>for shouting at a dumb animal.

Taking refuge in insults dose not support your argument.

>Do us a favour if you do not know how to help then...shut up!

As stated I am seeking the same information, I merely pointed out your
incorrect reply to help you to answer the question asked. It's an easy
mistake to make, why not accept that you made it and post a corrected
reply instead of being so defensive in insisting that you are right.

>If you require further assistance as you do not understand ask
>politely, I come across dickheads like you now and again, you will not
>get far in the world Goodbye!--

Why don't you answer the question asked, or are you going to blame the
original poster for asking the wrong question.

There you have it.

So typical of people like "the original poster" to question the asking price of a product because they think it's too much. No consideration given to what the damn thing actually costs to make...or how many fingers are in the pie. Someone else reminded me of DVSI's little IMBE vocoder technology that the 785 has in it.. thanks I forgot about THAT little item. Knowing DVSI, we are lucky that card is only $299 - I bet $200 of it is their "cut".

The price is not only driven by that but also by the novelty of the thing. It's the first one out there! Does anyone remember what the first VCRs cost to buy - $1000 and UP! And people jumped at the chance. Now you can get them for less than $50 on sale. Pretty soon, they'll have to give them away (a passing fad called DVD came out...) No reason why a digital scanner will be any different when *that* idea is 20 years old...

But Dan, you are right - and there is no bigger collection of Ebeneezer Scrooges then there are in the scanner hobby. Gimme gimme gimme for nada, nuthin, zip.

Just saw a post on a.r.s. binaries that sums it up perfectly. Some jerkwater lowlife wanting WinScan780 and ScanPro780 for free cause he doesn't even have the brains or cajones to steal it himself (that's what he wants someone ELSE to do for him). Totally disgusting behavior. Probably one of the same retards that downloads freeware for the scanner and then demands it work perfectly and comes in here whining and crying when it doesn't. I used to write that stuff - now I write applications for people who will actually PAY me for my time, because scanner hobbyists don't want to pay for a damn thing...

With attitudes like the ones prevalent in scanning these days, the hobby is dying a slow painful death. No wonder RS Canada is getting out of the biz.

Won't be long before the US stores drop them too. And we all have ourselves to thank.

-me

> Ihear great where I'm pointed however then I miss calls to the back of the beam<

That's the whole idea of a beam antenna. What you need is a dual antenna switch box (will also need 2 coax cables) so you can switch from omni to beam. This way you can monitor with the omni and when you hear something you want to listen to or pull out of the mud you can hone in on it with your directional beam.

>http://www.MilAirComms.com

I recently went to a ham fest, and a dealer was trying to sell BC780's. I asked him if/when they would come down in price (new) and he said he felt they would probably pull the -780 altogether and not sell them alongside the -785. He also had some interesting info about the demo units being sent to some dealers in a 780 case but containing 785 electronics with the digital card. He reported that the digital worked perfectly on the systems he had tried it on. Only problem was, there were only 3 systems within easy driving distance. So, looks like you can get the 785 now, and the card later if you need it, which may be a while in some areas.

1375. BC80XLT ... a common unit full of mystery.

Newsgroup: rec.radio.scanner
Date: 2002-08-04 17:49:36 UTC
From: at_the_helms@yahoo.com
Message-ID: <621d1b6e.0208040949.756933d2@posting.google.com>
Source record: 45066

I was messing around with keypad code tricks when I put
the unit down to answer the phone.

I came back a minute later to discover it scanning
frequencies these things aren't supposed to receive.

It had reached 3.90ï¿½MHz by the time realized that it
could only have started its search at 0.0!

That's right ... just like any scanner with FULL,
no-gap coverage. The lowest frequency this thing can go
is 29.0 MHz in the 10 Meter Band -- or so I thought.

I made the error of touching the keypad when I picked
it up and it reset to normal memory scan operation.

Yes, I've tried to duplicate my actions since to no
avail, but who knows, maybe a dust particle sitting in
the right place inside is what made it possible?

Very interesting indeed, but then, Unidens can be.

I did answer it you are obviously too dense to understand, explain just what do you not understand? First question: What is better the 7100 or 3300 I answered the 7100. What is so hard about that? OK as you are thick I will break it down so you can understand. 7100 being better than the 3300 means, that the 3300 is not as good as the 7100 are you with me now?
Next question was: Something about the audio not being as good as the 7100 I replied that the audio was not bad at all on the 3300. OK I will try and explain to your brain a bit more slowly. This means that the audio (that is the noise coming out of the speaker) is not bad.. God how else can I explain this???????? Next was something about the sensitivity selectivity and interference rejection and I replied: Sensitivity is definitely not worse in my opinion, but as for the
selectivity and interference then the 7100 comes out tops.
Now whats so hard with that? OK sorry I forgot you were a Twat! OK lets break it down for your brain to digest. This means that..Oh I realise what threw you now it was my slang word Tops excuse me for using 21st Century terminology. Tops basically means the best, so if we say that the 7100 is the tops then that means it is the best or better. With me now? No? Oh well don't worry we will cover that again on another day.

Next question was: I mainly need scanner for HF, I replied :
No question then, the 3300 is out of the race it does not cover HF. The chap wanted a scanner that covers HF the 3300 does not so it is out of the equation SIMPLE! Isn't it? Then I offered further help by reading a review on my website and you ask am I a politician? Where the hell did that come from? I hope that the person that reads this out to you does it with the same venom as when I typed it. Hey! you could even get them to explain it. Oh yeah just to prove you are a dummy I got my 12 yr old daughter to read my replies to the original message and she understood it fine I rest my case DUMMY!

1377. New Nasdsau Police Freqs?

Newsgroup: rec.radio.scanner
Date: 2002-08-04 17:52:40 UTC
From: scosgt@worldnet.att.net
Message-ID: <3d4d69bd.2343665@news-server.optonline.net>
Source record: 45065

Anyone know what they are going to be? 800 or digital?
see article below:
NASSAU COUNTY/

New Police Frequencies

Nassau County police officials moved one step closer to upgrading its 20-year-old communication system last week, when the Federal Communications Commission approved the department's request to reassign 47 radio frequencies from private broadcasting to public safety.

Though the licenses have not been issued yet, police officials were optimistic that they will soon have the much-needed frequencies to rebuild the department's present communication infrastructure and reduce the problem of "dead spots" - areas where radio signals are cut off from the main system because of geographical obstacles.

Chief of Support Services Paul Tully said that the increased frequencies also would make it possible to add functions to the radio system and craft a seamless communication network on which a number of public agencies could communicate with each other in the event of a large-scale disaster or emergency.

Police from different agencies could communicate with each other as well as with fire department command posts and other public agencies on frequencies specifically reserved for that purpose, Tully said.

"I think the need was recognized way before 9/11, but I think 9/11 is a vivid example of why you need to have an inter-operable radio system in place," he said. The application was submitted in February 2001.

Police officials have wrestled with the issue of "dead spots" over the past few years, but their options were restricted because of the limited radio spectrum available. Officials considered increasing the signals' power. But the department shares some channels with other public safety agencies in northern New Jersey and cranking up the output would have interfered with their reception, Tully said. More transmitter sites could have been built, but additional frequencies would still have been necessary, he said.

Officials also hope to add other features to the system that could cut down time spent on certain tasks. In one example, a revamped system would allow police officers to transmit information from an accident scene directly to the department's computer server.

Guys,

Take a break. The original question referred the the 7300, not the 3300.
See the subject.

One person misread it and replied with the wrong comparison.

Another is also looking for a 7100/7300 comparison.

How about helping each other, rather than beating each other up?

Enjoy your radios,

Craig

Please, I want peace. Whenever I put a post must have discussions. Instead of wasting the time in discussing, help more to newbies like I ;-), all we are friends and we are here for helping us . At the end, everything to turn out to be a badly understood, doesn't pass anything. I wanted a comparison between the MVT-7100 and the MVT-7300, not the MVT-3300, but in any case I thanks to you for the notes about this model.

For the interested people in the MVT-7300, I have found a small revision or rather, impressions, about the MVT-7300 at the URL: http://www.qsl.net/bmarc/ragchew-August-2001.pdf <===== at the end of this document. Also I have read that in WRTH 2001 edition, analyzes the MVT-7300 and the MVT-9000. If anyboy have the WRTH 2001 edition and can to scan the MVT-7300 review and comuncate it to me, I will be been very thankful to him.

Greetings,

Trond

I thought that "He asked about the MVT-7300" (more specifically "Is
better the YUPITERU MVT-7300 than the YUPITERU MVT-7100?") was pointing
it out, perhaps I was being foolish in this assumption. Oh, and I
accused you of being a politician because they tend to ignore the
question asked and talk about something else, I apologise for using such
a disgusting and depraved insult against you.

Your best bet for information is probably at www.strongsignals.net

Based on what I found there around 12/2000, I ended up buying the MVT-7100. Of all the wideband radios that were small enough
for me to consider, it seemed to get the strongest reviews for HF performance.

The audio quality is quite nice for program listening, but it's selectivity filter is wide, so if the signal you want is within
10-15khz of a much stronger one, you may not get it.

Hi Dave,

Odd that you should ask! On alt.radio.scanner there is a thread
currently going on about MDTs.
"http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&group=alt.radio.scann
er"
I highly reccomend that you read the thread.
The thread is called Mobile Data Terminals. To sum it up: One person
claims that NO ONE is decoding them. I claim to receive and decode them
in Sacramento, Ca on 867.1875 and 866.4625 MHZ and another man in
Glendale, Az says he decodes them on 856.2125 MHZ. Not knowing the
specific frequencies for my area I would search from 850 MHZ to 868 MHZ.

I hope you have a discriminator tap in your radio.

> can most MDT signals be decoded
I don't know. I can only tell you about what I've successfully decoded.

Any more question just send an email to me at mark1smi@hotpop.com

Mark

The 7100 is an excellent scanner but not for the new person to scanning.
The learning curve is a bit long. You also need to make sure the police and
fire in your area are not trunked or digital since the 7100 will handle
neither of those. I wold look to someting a little more basic like Uniden
or Radio Shack to start with, even something like the Yaesu VR 500 would be
a little easier to use.
Head over to http://www.strongsignals.net the best scanning site on the Web.

Yeah, there you go! If I guy expects to be paid for his own work or sees nothing wrong with the next guy being paid for his, he must be some kind of robber baron. That contributes one hell of a lot to the discussion. For those brain dead net-monkeys who think that making money - I would have to guess that one level of the government or another just supplies you with yours, Billy-Boy - is some kind of anti-social behavior, save your breath. That dog don't hunt with the productive, contributing members of society.

This sucks big time...they need to be monitored!

Any idea what the frequencies are...in case a digital scanner becomes a reality?

Well Said, Dan!!!

Reminds me of some lyrics from the song "I'd Love To Change The World" by
the Sixties rock group "Ten Years After":

"Tax the rich,
Feed the poor,
"Til there are no
rich no more."

The ability of many to do nothing outweighs the capability of the rest of us
to support both them and us.

Mark

"I believe a self-righteous liberal Democrat with a cause is more dangerous
than a Hell's Angel with an attitude." -- Ted Nugent

1401. Repair for Bearcat 210?

Newsgroup: rec.radio.scanner
Date: 2002-08-05 06:14:01 UTC
From: none@this.com
Message-ID: <3d4e143d.102423643@news.ev1.net>
Source record: 45091

Hello,

My grandfather had a Bearcat 210. When he passed, it was boxed up by my grandmother. When she passed, I acquired the box.

The display is blank, but the squelch and volume do adjust.
Hard to know if any of the scanning functions work without the display.
The back of the unit has badly corroded battery compartment. The battery type is a 393 Rayovac, and the socket looks to be corroded beyond cleaning. What would be a suitable replacement for the socket?

Also, is there any practical use for a scanner this old? Is it worth repairing? There was no user's manual in the package, so I haven't any information on what its ranges are/were.

I tried to subscibe to an antique radio newsgroup listed elsewhere here, but apparently I can't actually join until I can verify my e-mail address with Yahoo, and Yahoo is taking its time sending my confirmation thru.

Any further information direction would be greatly appreciated.
Take care all.

1406. BC780XLT Indoor antenna tip

Newsgroup: rec.radio.scanner
Date: 2002-08-05 13:28:48 UTC
From: Terry <nepvetm@gt.rr.com>
Message-ID: <k4v39.39785$Yd.1926174@twister.austin.rr.com>
Source record: 45096

If you are using the 780 with an antenna connected to the back of the scanner and get poor or not as good reception as you'd want, consider the following:

Get a piece of coax with a BNC female to female coupler and put the antenna on the end of the wire with the wire connected to the back of the scanner. Move the wire around the room in various locations. There can be a tremendous difference from where the scanner is, to say *exactly* 3 inches down from the ceiling and 2 1/2 feet from the wall.

Use the S-Meter to find the best place to put the antenna. It is very precision guessing. Moving the antenna 2 inches off a spot can drop it from a full signal to none.

This is because the signal from a particular station reaches your house via
multiple paths. You will get part of the signal direct from the transmitter.
In addition, you will receive multiple reflections from buildings, water towers, etc.

The spot where the signals arrive IN PHASE will provide the best
reception.

Unfortunately, this will only be the best spot for that particular
station.

I'm going from memory, but there are some freqs around there (454.750???)
that are used for telephone calls from airplanes (usually corporate jets).
When not in use you hear a continuous whistle. It might not be an "image."

> And what are thoes horizontal antennas on fire and EMS building? I see

Sounds like a UHF yagi antenna (vertically polarized). Could be used for
repeater links or to activate a remote fire siren.

I tried something today on my 780 that made a tremendous difference.......Got the smaller rad shack base antenna,I had already made a stand for it, (the stand is simply a piece of stainless 6"x12" with a 1 - 1/2" stainless pipe tacked on for mounting the antenna),put the antenna on and sat it on a small metal file cabinet I have in my room.Also grounded THE SCANNER to the center lug of my electrical socket.This did away with tons of ground noise and my reception went from mediocre reception to a couple of more counties each way, WOW!! BIG DIFFERENCE!!! I live in an apartment building where outside antennas aren't allowed so I thought I'd try this and I am some inpressed,,,,,what a difference......maybe I'll start making these stands and selling them on eBay,or on here......anybody think they might be inetrested e-mail me and I'll send ya a pic of my setup......

I was just looking at Bob's software for the VR-120, and the site says "The free Tcl/Tk interpreter software must be installed on your computer prior to using tk120. " However it doesn't say where to get this interpreter. Where do I find it?

Odd... I never had any trouble with it (but I rarely use that feature..)

Try this: go to the talkgroup tab first and select the row you want to start
the import at. THEN do the import. That's how I do it, and it worked for me.

Let us know if it works for you.

Amateur Radio Newsline™ Report 1304 August 9th, 2002

Amateur Radio Newsline report number 1304 with a release date of Friday, August 9th 2002 to follow in 5-4-3-2-1.

The following is a QST. U.K. hams take to 5 MHz in a big experiment. Find out the details on Amateur Radio Newsline report number 1304 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: BIG UK 5MHZ EXPERIMENT

If you tune around 5 MHz and hear what sounds like ham radio QSO's, your ears are not playing tricks. A major study of 5 MHz propagation has begun in Great Britain and some hams are already on the air. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--

The 5 Mhz experiment has begun. The Radio Society of Great Britain has announced that permission has been granted by the Ministry of Defence and the Radiocommunications Agency for the allocation of five spot frequencies in the range of 5250 to 5450kHz. The frequencies will be made avbailable in the form of a 3 kilohertz bandwidth channel by way of a Notice of Variation to the UK Amateur License. Because it is a controlled experiment applicants are required to report their findings and results to the RSGB.

The purpose of the experiment is to carry out propagation and antenna investigations aimed at improving the understanding of Near Zenithal Radiation or NVIS - Near Vertical-Incidence Skywave - communications via the ionosphere. The frequencies assigned are 5260, 5280, 5290, 5400 and 5405kHz. It's expected that this experiment will run for about 4 years.

Jeramy Boot, G4NJH.

--

Here in the United States, Charles Harpole, K4VUD, one of the permitted operators of the American WA2XSY 5 MHz-band test stations invites U-K hams to contact him to set up a sked. The 5 point 260 MHz channel would be the best frequency for him. He is available for all times and days until the 20th of August and his e-mail is k4vud@hotmail.com (GB2RS)

**

ENFORCEMENT: FIVE LICENSES CANCELED BY FCC

Five hams who participated in a September 2001 testing session in Yucaipa California and who declined to be retested have lost their ham radio licenses. The FCC's Riley Hollingsworth says that in this case it was the VEC who brought the matter to his agency:

--
Hollingsworth: "Now the W5YI-VEC really did its homework on this one. They picked up some comments and complaints on an Internet News Group about the examination session; did a little homework and further research and found some very good reasons to refer the matter to us."
--

On April 30, the FCC wrote all five requiring them to re-take their Amateur Examinations before June 30th. All five failed to appear. Again the FCC's Riley Hollingsworth:

--
Hollingsworth: "Those licensees were Eddie Bartolome - Extra Class N6YAG of Los Angeles; Camito Lopez KG6GJC a Technician of Los Angeles; Marcial Rivas - General Class KG6HCP of Salem Oregon; Manuel M. Vega, KG6GSP - General class of Anaheim California and Marcelino Llanes, KG6HBR of Oxnard California."
--

Hollingsworth adds that the FCC is continuing its investigation of other examinations given by the Volunteer Examination team involved in the September 1st 2001 session in Yucaipa. Also that his office really appreciates the vigilance of the W5YI-VEC. (FCC, RAIN)

**

ENFORCEMENT: FCC MAY RETURN FORMER KV4FZ TO THE AIRWAVES

An ex-ham from the US Virgin Islands who was forced off the air a year and a half ago by the FCC may soon be back on, courtesy of the FCC. This as the agency indicates that it may act to reinstate the amateur license of Herbert L. Schoenbohm, the former KV4FZ. Amateur Radio Newsline's David Black, KB4KCH, has been following this story and has the latest:

--
Herbert L. Schoenbohm's name shows up a lot in FCC records. He's the former ham who used to hold the callsign KV4FZ. That was before he lost his license.

In December, 1992, Schoenbohm was convicted of fraudulently using a counterfeit access device to obtain long distance telephone service. He was sentenced to two months of house arrest, two years probation and fined $5000. That left the FCC feeling that a felony conviction disqualified Schoenbohm from continuing as a Commission Licensee.

Two years later, Schoenbohm filed with the Commission to renew his amateur radio license. The Commission answered -- but not with what he wanted to hear; instead, the FCC designated his application for a hearing. Two encounters took place--one in 1995, the other in '97. At that point, the Commission told Schoenbohm he should no longer be allowed to have an FCC license.

He was allowed to operate until he exhausted all avenues of appeal. That happened in October of 2000. In January, 2001, Schoenbohm ceased on-air operations.

Before leaving the airwaves, 'though, Schoenbohm vowed that he would one day return to the airwaves as a licensed radio amateur. That day may be soon--based on findings presented at an FCC Administrative Law hearing earlier this year.

The hearing was held to determine if Schoenbohm now meets the requirements to once again become a Commission license holder in the Amateur Radio Service. The finding is complex and covers nearly two dozen pages. But it appears that the government may be ready to give Schoenbohm a second chance as a licensed ham.

The Commission says in part there is sufficient evidence in the record to support a finding that Schoenbohm has rehabilitated himself. The Commission notes that -- based on the evidence --it appears unlikely he would engage in any future misconduct. The Commission's Enforcement Bureau Investigations and Hearings Division endorses Schoenbohm's return to the amateur radio airwaves.

Schoenbohm took and passed a new exam in March, 2001. But the Commission again threw in a delay, designating his application for a hearing on the basis of character issues. This is the application that an Administrative Law Judge has been reviewing. Now that the recommendations are in, the Administrative law judge could issue a final opinion and recommendation within the next few months. That means Herbert Schoenbohm could possible be on the air again sometime this year.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

In the end, it is going to be up to the Commission to make a final resolution as to whether or not the former KV4FZ returns to ham radio. Nobody can predict what that decision will be. And if he is permitted to return, will it be with his old KV4FZ call sign? (ARNewsline™ from FCC Publiic Files)

RESCUE RADIO: COMMUNICATIONS TECHNOLOGY HELPS SAVE KIDNAPPED GIRLS

Two kidnapped California teenagers are alive thanks in part to a newly developed law enforcement communications technology. Mert Garlick, N6AWE, has the details:

--
It happened on Thursday August 1st when two teenage girls from the Quartz Hill

area of Southern California were abducted at gunpoint. Using the newly established AMBER child abduction alert system, the names of the teens and a description of the car they were in was immediately distributed to law enforcement agencies and broadcast outlets statewide. Shortly thereafter the California Transportation Authority was displaying information on it’s 316 electronic signs on freeways.

Sheriff's deputies in Kern County soon received several calls from people who saw the white Ford S-U-V. A sheriff's helicopter crew used the information to direct a ground unit that made the felony arrest stop. When he resisted and brandished a weapon, deputies shot and killed Roy Dean Ratliff and freed the girls.

The rescue took place only six days after Governor Gray Davis directed the installation of the AMBER system. AMBER uses a combination of two-way radio, fax, e-mail and other communications technology to quickly spread word when a child is abducted. It is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996.

In this latest case it took less than 4 hours to get the AMBER alert on the two missing girls circulated to the road signs. California’s Governor Davis says that his states AMBER system will now be refined to make it react more swiftly.

For the Amateur Radio Newsline, Mert Garlick, N6AWE.
--

Today, there are forty-one AMBER Alert programs across the country. The system is credited with safely recovering at least seventeen children since 1997. (Published news reports)

**

ENFORCEMENT: PLEASE FIX THE INTERFERENCE

A pair of utility companies have received letters from the FCC regarding unresolved interference complaints from area amateurs. According to the W5YI Report Lakeland Electric Company in Florida and Commonwealth Edison in Illinois both were sent notes reminding them of their responsibilities to prevent interference to radio stations including radio amateurs. The letters gave the electric companies 90 days to either resolve the problems or contact the FCC with a specific timetable for making the fix. (FCC from W5YI Report)

**

HAM RADIO POLITICS: NEW DIRECTORS FOR THE NFCC

Turning to the ham radio political arena, word that Ken Chilton, KA1TIH; Alex Harvilchuck, N3NMN and Vincent Bardsley, KB3OM have been elected to the Board of Directors of the National Frequency Coordination Council. They replace outgoing Directors Dick Isely, W9GIG, Owen Wormser, K6LEW, and Dave Baughn, KX4I, who helped form the NFCC at a meeting in St. Charles Missouri back in 1995.

Chilton, Havilchuck and Bardsley also join Nels Harvey, WA9JOB and Clay Freinwald, K7CR as the duly constituted National Frequency Coordinators' Board. This for the twelve month period starting on September 1st. (ARNewsline™)

**

HAM RADIO POLITICS: NEW SACRAMENTO SM IS OLD SACRAMENTO SM

California’s former Sacramento Valley ARRL Section Manager has become the new Sacramento Valley Section Manager following the resignation of the current Sacramento Valley Section Manager. Confused? Well, here’s what happened.

According to an ARRL Bulletin, Jettie Hill, W6RFF, of Roseville, California, has been appointed to succeed Jerry Boyd, K6BZ, as the Sacramento Valley Section Manager. This is because Boyd is moving out of the section.

Boyd was appointed in 2000 to replace Hill. Hill continued to serve the section as the regions Affiliated Club Coordinator and as an Official Relay Station. W6RFF previously served as Santa Clara Valley Section Communications Manager from 1978 until 1982 and as ARRL Pacific Division Vice Director in 1982 and 1983. The appointment of Hill, who had previously served for more than 10 years as Sacramento Valley S-M became effective on August 1st. Got that? (ARRL)

**

FUTURE TECHNOLOGY: HIGH TECH WORKERS NEEDED

Still in California, word that lack of qualified workers is costing Silicon Valley billions of dollars annually. The management consulting firm A.T. Kearney says that this is threatening the regions position as a global high technology center. The region's shortage of high-tech workers means that one in three jobs requires special recruitment efforts, or goes unfilled, leading to a loss of over $3 billion a year. (ProPeople.com)

**

RADIO REGULATIONS: PERMANENT CELL NUMBERS ON HOLD

Mobile phone users who want to keep their numbers after switching wireless companies will have to wait until late next year for that option. This after the Federal Communications Commission gives cellular phone companies until November of 2003 to offer customers the choice.

The new date, one year later than the previous deadline to implement the service. It is the third extension granted by the FCC. Most wireless companies oppose the idea, arguing it would cost billions of dollars and drain resources needed to improve and lower the cost of wireless services. (FCC)

**

WITH THE HANDI-HAMS: EXTRA CLASS MANUAL IN AUDIO

The Handi-Hams have announced that the latest ARRL Extra Class License Manual is now available to it’s blind members in adapted audio format. At the present time Handi Hams only digital media available but the audio is being

re-mastered onto tape. When the cassette version is available Handi Hams will let us know so that we can let you know. Meantime keep an eye at Book and Tape Catalog area at www.handiham.org for updates. (Handi Hams)

**

THE SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

Its time for a report from the Amateur Radio Newsline Support Fund. Here's our Administrator -- Andy Jarema, N6TCQ:

--
There are two items to cover this week. I'll start with our poll regarding credit cards. Three weeks ago we asked those interested in supporting Amateur radio Newsline using a credit card to write the single word YES in the subject line of an e-mail and send it to us. We have tallied the results and there were only 17 who said yes. And of the 17, all but one said that only a Pay Pal account was acceptable to them.

Well, statistically speaking, you don't have to know how to do linear regression to know that 17 people out of the 10's of thousands who listen in each week is not a very good response. What it says is that 17 people have Pay Pal access and would use it to help support Amateur Radio Newsline. Even so, we looked into creating a Pay Pal service for those who wanted to use it. Without wasting a lot of time, suffice it to say that the costs involved versus the return would not warrant the expenditure. So at present the credit card issue is dead. For now at least, the Support Fund will remain as it always has. Just the P.O. Box where donations can be sent. Get a pencil and paper ready. I'll give it in a few moments.

The other item I want to touch on briefly is the current state of the checking account. Thanks to your generosity, we made it through June and July. What that means is the bills from May were paid in early June and those from June went out on schedule in July. Now it's early August. The July bills have come due, unfortunately at the same time that our folks are off to Huntsville, Alabama to present the 2002 Young Ham of the Year Award. So that you get a better understanding of the costs involved, I've done a rough breakdown.

First of all, our corporate underwriters Vertex Standard and C-Q Magazine cover almost all the costs of the young person selected for the award. They pay their airfare. They pay their lodging. Vertex-Standard provides an additional gift of Yaesu brand ham radio gear. C-Q treats the winner to a week at Spacecamp. When you add that up, it's probably a gift package with a retail price tag of close to $5000.

Obviously, they do their part and we have to do ours. It costs about $300 a year for a round trip ticket to get one of our people from Los Angeles to Huntsville. Actually, we have our people fly to Birmingham and drive up to Huntsville because this saves quite a bit of money. Yes, it takes them out of their way and adds a few hours of travel time. But the savings in airfare make this added time worthwhile.

The wonderful folks at the Huntsville Hamfest provide us with a free room. We do have to pay our people's expenses like food, hotel, telephone service and a rental car when necessary. We also pay for the plaque presented to the winner and for the mini-banquet we hold for him or her on the Friday night prior to the actual Saturday presentation. The total this year will be somewhere between $1000 to $1100. So we need to raise that in addition to our normal $800 to $1000 it costs monthly to keep the Amateur Radio Newsline newscasts coming your way. And that's where you come in.

Amateur Radio Newsline is a federal 501 (C) (3) not for profit corporation. Donations to it are tax deductible. The address – you've heard it before - is Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

OK. 'Nuf said. But I'll be back next week with the latest thank-you list. For now, from Arcadia, in sunny Southern California's San Gabriel Valley, I'm Andy Jarema, N6TCQ.
--

If you missed the address given by Andy it will repeated at the end of this weeks newscast. (Newsline Support Fund)

**

HAM RADIO IN SPACE: KD5MDT REPLACES KC5FVF ON ISS EXPEDITION 6 CREW

Astronaut Don Pettit, KD5MDT, has been named to replace Don Thomas, KC5FVF, as a member of the Expedition 6 International Space Station crew. According to the ARRL Letter, Pettit had been training as backup flight engineer for the increment six team and was ready to step in.

NASA said the reassignment resulted from a medical issue that affects Thomas' long-duration space flight qualifications. According to Astronaut Office Chief Charlie Precourt, KB5YSQ, the demanding nature of long-term space flight requires a conservative approach to crew health issues, especially this early in the program. Pettit will join Expedition 6 Commander Kenneth Bowersox, KD5JBP, and Russian cosmonaut Nikolai Budarin, RV3DB. (ARRL Letter)

**

HAM RADIO IN SPACE: THE METEORS ARE COMING

Weak Signal operators -- listen up. The Perseid meteors are on their way.

Lee Wical, KH6BZF, says over the QCWA remailer that from midnight to dawn, on Monday August 12th and Tuesday August 13th about 60 to 70 meteors per hour will enter Earth's atmosphere. This particular meteor shower is created by the Earth passing through the debris field left from the Swift-Tuttle comet. The grain-like particles enter Earth's atmosphere, burn up and create what most

people call shooting stars.

The Perseid Meteor shower is not expected to be as spectacular as the Leonid Meteor shower that occurs each November. But, if viewing is good, people will not be disappointed. And if the ionized tails are good, ham radio meteor scatter D-Xers and WSJT users will be happy as well. (KH6BZF)

**

INTERNATIONAL - UK: LONG WAVE GOODBYE

As predicted by Media Network, the loss-making sports station TEAMtalk 252, which broadcast to the UK on 252 kHz Long Wave from a transmitter in Ireland, has closed down. This, after less than 6 months on the air. The station ceased broadcasting at 1300 UTC on July 31st. (Media Network)

**

INTERNATIONAL-CANADA: NEW RAC QUEBEC SM

Claude Paquet, VE2OCP has been elected as Radio Amateurs of Canada Section Manager for Quebec. This, for a two year term that will begin on November 1st. Paquet ran unopposed, eliminating the need for a balloted election. He has also agreed to complete the term of Richard Desaulniers, VE2DX who resigned for personal and professional reasons on August 1st. (RAC)

**

DX

In D-X, G0TQJ he has now gone QRT from Afghanistan where he operate slash YA. During his say in Kabul Chris made 1950 QSOs on SSB and another 850 on RTTY. He is getting his QSL cards printed. He has also sent his documentation to the ARRL DXCC desk for approval. (GB2RS)

And the FISTS newsletter reports on the apparent pirating of callsign ZD7CW. The pirate is using CW and not very active. In fact, he was last heard in November of 2001. But the real ZD7CW has been inactive for several years. (Q-News)

**

THAT FINAL ITEM: A TRUE CAPTIVE AUDIENCE!

And finally this week the story of an interesting call sign operating from a rather unusual place in Ireland. Here’s Q-News Graham Kemp, VK4BB;

--
From our files, the story of a captive audience. A permanent amateur Radio Station with the call sign EI0CRM -- you heard right -- C-R-M -- “crim” -- EI0CRM is being set up in of all places the radio museum of the Cork City jail.

Cork City jail opened for business in 1824 and was used as a prison until 1923. When Radio Erin was expanding in the mid 1920’s, it was located in this jail. Its call sign was 6CK.

The broadcasting studio is now fully restored and a fine display of radio artifacts are on permanent display. Have a listen out for EI0CRM
--

Talk about a QSL card that you may want to keep under lock and key. (Q-News)

**

What's that disease that causes people to speak in strings of
swearing? Tourette's Syndrome? Have you two considered joining the
Tourette's Syndrome Group? You could save the strain of having to
utilize non-swear words like SCANNER, SCANNING & ANTENNA. Just trying
to help.

The Yupi without question! Yaesu dropped the ball when they made the VR-500, and the VR-5000 for that matter. They look great, have lots of desirable features, but they don't perform well.

Better unload your un-blocked scanners soon, before they become useless,
and obsolete.

Bill Crocker

NEW YORK, New York (AP) -- The Federal Communications Commission on
Thursday said that in five years it will stop requiring cellular
companies to provide non-digital wireless service for 20 million people
who still use "analog" mobile phones.

http://www.cnn.com/2002/TECH/ptech/08/09/analog.cellular.ap/index.html

1447. Macomb County Michigan going Digital...

Newsgroup: rec.radio.scanner
Date: 2002-08-10 22:32:14 UTC
From: Bill Crocker <billcrocker@ameritech.net>
Message-ID: <20020810183221420-0400@news.det.sbcglobal.net>
Source record: 45136

After finding out that Shelby Twp, Michigan joined onto the Michigan State Police digital radio system, I was getting concerned. Soon after, I read that the Macomb County Sheriff's Department is also considering making the move to digital. I contacted the Macomb County Sheriff's department, and confirmed a couple things. Currently, Macomb is researching their digital options. They claim they do not plan to join the same digital system that the Michigan State Police are using. Also, Shelby Twp did not buy into it, they're only leasing it from the State Of Michigan. What ever Macomb County decides on, is what Shelby Twp., will then move to as well. I was also told that the City Of Warren, Michigan (Macomb County), would be joining the same system that Macomb County settles on.

When I asked if they would enable encryption, should the FCC ever approve the new Uniden Digital scanners, he said no. It is not their intention to block the public from monitoring their daily communications, and to do so would generate a lot of negative feelings toward the department, from it's citizens.

I wouldn't toss them just yet - those freqs will be used by something....
maybe monitorable, and maybe not - besides, 5 years is a long time in the
scanner world...

In 5 years APCO 25 scanners will be sold at RS for $99 and come with a free
set of steak knives... think about it..

Of course, an unblocked VR120, for example, doesn't have all those "missing" bands scattered throughout the UHF range. Seems like a reasonable reason to have an unblocked scanner. Check some of the recent posts re the VR120 and VR500.

Hello

I possess a new Yaesu Vr-500.
I bought it especially for the air band, but I can't find anything else than air band, police and tv stations...
I hoped to be able to scan private talkie-walkies, or security guards, fireworks or even taxi's and CB (trucks on the roads...)
but I can't get them. But I can hear very clearly the police and the air band as well as tv stations...

What should I do? Change my way of using the scanner? Am I doing something wrong??

Please let me know!!

Thanks a lot,

Bruno

1455. DJ-X2000 disappointments

Newsgroup: rec.radio.scanner
Date: 2002-08-11 02:50:01 UTC
From: Zen Tao <zhentao@worldnet.att.net>
Message-ID: <thk59.6631$Ke2.560939@bgtnsc04-news.ops.worldnet.att.net>
Source record: 45144

First, I must say that I am a newbie so you have to consider that in my statements. I bought a 780XLT a month ago and have had a blast with it. I wanted to buy a handheld and I also wanted some other equipment as well. I wanted a Frequency Counter and I liked the idea of Reaction Tuning. I found the Alinco DJ-X2000. It had many features that seemed desireable. I liked many, if not all, of the features that were listed on their color handout but here are the disappointments.

"Flash Tune" (reaction tuning) - I took this radio into a fast food restaurant and it did not pick up their wireless mikes. Perhaps it was operator error.

"Frequency Counter" - This was not a FC, per se, that I could see. It did have an RF detector that couldn't pick up my microwave oven until it was only 12" away. It seems like it should be more sensitive than that. It didn't pick up my garage door opener until it was only 1" away. Is this normal?

"Inversion descrambler" - Although I would probably never have a need for this, this is clearly listed as a feature. Then when you get it home and read the manual, it says that this feature is disabled in the U.S.

Additionly, even though I have only the 780 for comparison, I thought the audio was poor. Perhaps I just haven't heard other handhelds. It was punchy and I suppose good for speech intelligibility but it was no fun to listen.

Also, I didn't like that many operations required two hands. It requires first pressing a function button, followed by another button. Perhaps this is common (I don't know) but it is a real pain to use the volume or squelch.

It did have some very nice features though. It was broadband 100KHz to 2.15GHz, many receive bands, 2000 channels, computer programmable, alphanumeric display, channel scope and MORE! I liked many things about it but wound up taking it back. Am I being too picky or what?

For $350, I was thrilled with my 780, for $500 I was disappointed with the X2000.

Are my perceptions accurate or not? Is there a handheld that you think I might feel is money well spent?

Thanks,
Nick W.

You're sixty miles from no where is the most likely cause. On a more serious note Radio Shack on the beach (Nags Head) has provided a local frequency sheet for some time. I may have a copy and will look for it and can scan it for you if you think that will help. But it is pre-800 mhz days. Also you might scan 138-144 mhz for the numerous military ops in the area just out of curiosity.

If you bought it new, and still have your receipt, why not return it for
a refund?

So the tens of thousands of law enforcement MDTs using CDPD will need
to be converted to some other data link? (CDPD is on the analog cell
network).

I wasn't aware MDTs were analog! Considering their moving quickly to convert their voice coms to digital, maybe MDTs , in five years, isn't out of the question. I think 9-11 has put a big demand on new communications equipment...justified, or not.

Just a couple things...

I bet your microwave oven operates on 2450..your radio just goes to
2150 right?
Alinco really has no choice about the inversion scrambling. In the US
it is not legal to provide that feature:(

Not to say you aren't right about the radio though.

Chuck the antenna and get a Maxon WTA-1 CB whip antenna (from Scanners
Unlimited 19.95).
I use one on mine and it is the best I've seen. Expands to 42", I believe,
and works well thruout the range of the 500. No, I have no ties to S.U.
Just VERY satisfied with mine...

1463. Re: VR-500 V Yupi 7100

Newsgroup: rec.radio.scanner
Date: 2002-08-11 04:09:35 UTC
From: Bill Becker <the.bill@cox.net>
Message-ID: <3D55E37B.8050602@cox.net>
Source record: 45002

I cannot speak for the 7100 but I had the Yupi MVT9000 M3 and did a side-by-side comparison with the VR500 on HF only. The Yaesu was more sensitive on SSB amateur and SW broadcast than the Yupi using the exact BNC antenna arrangement.. I didn't compare them on VHF/UHF because my primary interest is HF with occasional monitoring of the local VHF/UHF frequencies. The Yaesu is excellent (for the size and price) on SSB and the other night I had a (very weak) reception of *something* on 8842.8 USB mentioning about San Francisco (utility station?) here in my Phoenix location with the VR-500 and the Sony AN-61 passive longwire antenna.

Consequently, I have since sold the Yupi receiver, but it did have many more features than the Yaesu, just not where it really mattered to me.

Good luck with your decision.

Bill Becker

I too am pleased with the HF/SSB capabilities of my 500. It also works very
well for scanning my local P.D. and Mil frequencies. I DO NOT use the stock
antenna as it is virtually worthless for anything other than UHF. I use a
Maxon WT-1 CB base loaded antenna which is ideal for my uses.

Hello fellow hobbyists!!

For a real review on the new all in one UHF CB and Scanner, head over to Newcastle Scan
http://newcastlescan.tripod.com There's other info and freqs NO pop ups just a real
EZINE style website...

We must thank Peter From Newcastle Pro Sound
(http://www.newcastleprosound.com.au and I guess new web site coming soon)
for opportunity to review this little beauty
and uniden for expanding their vision (about time for an 2 in 1).

If you want to sell an old radio or scanner send an email and we put it on
our classifieds page

any amateurs who have written a basic introduction to amateur radio we
really need it for our site, of course including freqs with Newcastle in
mind:) (well we got the HMAS Nottingham!!!)

Cheers and best wishes
Mike and Garry

Gad, sounds like cb radio...And I have to get a license for that???
Geez!!!! But really , isn't it ok for people to let off steam once in
a while instead of being old sticks in the mud? You have to admit. It
is great third rate entertainment, and all you have to do is roll over
and turn it on, and turn it off....Good day.

1469. What will be heard on old broadcast freqs when reassigned?

Newsgroup: rec.radio.scanner
Date: 2002-08-11 06:54:43 UTC
From: jonkg4gfu@wmconnect.com
Message-ID: <5d7f388e.0208102254.7b62fb8@posting.google.com>
Source record: 45008

Since the FCC wants to auction off the freqs now used by TV broadcasters; what is likely to be on those freqs and will TVs be able to receive those freqs once reassigned? I have heard that those freqs will probably go to cellular companies. I don't listen to blocked cell phones now, and don't see myself doing that in the future, but I wonder what might be heard? Jon.

1470. Re: What will be heard on old broadcast freqs when reassigned?

Newsgroup: rec.radio.scanner

Source record: 45009

Well, if they do go to cell phones, they would have to be analog to listen to them... If you have an older TV (not just a couple years old, I mean old; back when they went up to channel 83) with a dial for fine-tuning, you can turn the TV to channel 81 and pick up analog cell phone calls. The tuning knob will be extremely touchy, but it is possible....

Not to mention that being in the 476-477 MHz range, the local operators of TV Channels 14&15 in the smaller areas where it is not used for P/S biz use as the 'S' Band will scream and holler and wave their arms and that is not a pretty sight.

great review guys, but no pop ups???? You must have your pop up killer
on when you visit your own site. :)

I have 2 Pro-93's for sale. Almost in brand new condition. $200.00 each or buy both for $375 and I'll throw in the programming cable and a RS power supply. There radio's are both 1.0 Firmware and do not have the rechargeable battery pack (just the standard pack). Free delivery in Metro Atlanta area, elsewhere $10.00 shipping flat fee.

How about changing the menu/links at the top from that beige to another
colour....very hard to read from my normal postion
and no matter what you say if you have a web page with Tripod you will
always get popups

1478. Re: Dare County , NC Freqs: Trunked? Digital?

Newsgroup: rec.radio.scanner
Date: 2002-08-11 15:03:00 UTC
From: jamulter@aol.com
Message-ID: <20020811110300.03037.00003950@mb-mu.aol.com>
Source record: 45017

>I'm in Salvo NC (Just above Hatteras on the Outer Banks) with my Pro-92 and
>can't hear squat.

T. Dub,

As another poster mentioned, being on Hatteras Island isolates you from alot of the VHF / UHF communications at the north end of Dare County, and on the main land.

If you are using the rubber duckie, that will also limit your reception.

No - the trunked system licensed to Dare County is not in use, although the state and Kitty Hawk PD are using two of the frequencies for the mobile laptop / CJIN information network.

Since you have a Pro 92, here's some frequencies and tones to program in. The county repeater channels should be easily heard, since they are co-located on a cell tower site in Waves:

460.350 / 203.5 R ... Dare Co Sheriffs on Hatteras Island

460.250 / 203.5 ... can be used for sheriffs tac on Hatteras Island; main S-O channel north of Whale Bone Junction

164.725 / 103.5 R ... National Park Service rangers at Cape Hatteras Nat Seashore

163.150 / 186.2 R ... US Fish and Wildlife at Pea Island and Alligator River Nat Wildlife Refuge

155.265 / 107.2 ... Hatteras Rescue tac channel

155.280 / 107.2 ... County EMS and Med Helo dispatch

155.340 / 107.2 ... contact with med facilities on Hatteras Island

155.400 / 107.2 ... EMS / rescue tac

EMS station 3 ... Buxton
EMS station 6 ... Rodanthe

155.775 / 107.2 R ... County Fire "south" dispatch

154.010 / 107.2 ... fireground channel

154.070 / 107.2 ... fireground channel

Fire Station 40 ... Hatteras
Fire station 42 ... Frisco
Fire Station 44 ... Buxton

Fire Station 46 ... Avon
Fire Station 48 ... Salvo
Fire Station 50 ... Chicamacomico

Keep in mind that the volunteer fire departments on the island also serve as first responders on medical calls, so you may hear activity on both fire and EMS channels during a call.

If the call involves a water rescue, the Park Service and / or the Coast Guard may also respond. There are several marine channels that fire - EMS - NPS and USCG have predesignated for water rescues off Hatteras Island, but I don't have information on the current channels. Each agency has access to the other agencies' channels on a limited basis.

NCHP uses both channel 1 and channel 17 in the county. Last time I heard, units on Hatteras Island were still on channel 1 ... 42.62 / 173.8 dispatch and 42.78 / 173.8 mobile ... because they could not hit the channel 17 remote site from the south end of the county. "Williamston" is the dispatch, and cars I-D with "A-9xx," where xx are numbers. They can also use the high band repeater (on good days) in Columbia on 154.680 / 131.8 Hz.

Resident troopers ... those that live on the Island year-round ... will have UHF radios for direct contact with sheriffs and county dispatch. Some will also have laptops in their vehicles for using the Criminal Justice Information Network, as well as messaging to / from other NCHP units and dispatch.

If you ride the ferry, listen to 42.26 / 107.2 for operations at the dock, along with the marine channels.

With regards to commercial trunked systems on Hatteras Island, I believe the only site is in Buxton, and is licensed to Commercial Radio Services out of the Tidewater, Va. area. They also have a site in Kitty Hawk.

I'm not a ham, but you might want to listen to the amateur radio repeaters in the area. There are sites in Manteo, Kitty Hawk, Buxton and Columbia. The Buxton and Manteo sites may now be linkable. Amateur radio equipment was recently installed in all the county fire departments, as back-up to normal communications, in a severe weather situation. Firefighters are being encouraged to take the no-code test and obtain an amateur license.

Here's some amateur info I have for the area, although frequencies or tones may have changed:

145.110 / 131.8 ... Kitty Hawk
145.150 / 131.8 ... Buxton
146.625 / 131.8 ... Buxton
146.835 / 131.8 ... Columbia
146.940 / ? ... Manteo

I hope the above helps. I used to spend alot of time in Buxton and Rodanthe. Even with 5 scanners in the truck, the radios would be pretty quiet at times.

You might get some coastal enhancement during inversion conditions. Henburn's tropo prediction maps for the next three days don't look very encouraging for

regional conditions, though.

In place of VHF / UHF, check out A.M. radio DXing. You may be surprised on how many stations from the northeast portion of the U.S. you can hear during the day ... if you can escape the power line noise.

Any questions ... feel free to e-mail me directly. Enjoy.

Does anyone know if a normal shake roof would attenuate a 1.5-2ghz signal significantly. I'd like to put up a dish for GOES reception and the perfect placement would be a fixed mount in the attic. Outside mounts are exposed to a lot of wind (not to mention the comments about the esthetics).

Thanks for any information.

Don't count on it. Mr. "Herbie's" return to the air is predicated on his
(as he put it) "learning the
hard way", and that "being off the air was the supreme punishment". When
he gets back on the
air, he'd better behave himself. The Amateur community begged for years for
strict enforcement and the weeding out of those who would make another
lawless "CB" band out of ham radio. Mr
Shoenbaum (sic?) was a a product of the days when FCC didn't really care
about ham and CB.
I would be willing to bet that, if those who were part of that "old" gang
are waiting with bated breath for the "old" days, they are going to be in
for a surprise. Not only Mr. Hollingsworth won't
tolerate such shenanagins again, but the Amateur community as a whole won't
have it either. Things
are changing, and clowns are going to be painting on sad faces in the coming
months.

Hi Trond, I don't know bander.com but ordered recently the Lowe HF350 (=Palstar R30) very cheap from thiecom.de, service and delivery conditions/methods were excellent, emails with questions were answered quickly, paiment: COD= cash on delivery: perfect, it took two weeks before i received the package but that was because they had to wait for the antenna-delivery from rfsystems, which i ordered at the same time. I was so satisfied that i ordered yesterday (on their website)a portable rx for the bedroom. I think you can order safely with them.

I bought my MVT-7100 from Bandercom, and they were prompt - perhaps 4 days for delivery to the USA with payment by credit card.

If Javiation had them in stock at the time, I probably would have ordered from them though, as they sell a leather case for the
radio that's much nicer than the plastic one Yupiteru makes.

1498. Live Video feeds from PD helo - anyone successfully monitored them?

Newsgroup: rec.radio.scanner
Date: 2002-08-11 23:17:22 UTC
From: Me <Me@none.com>
Message-ID: <6gC59.16110$eb.1471482@news2.west.cox.net>
Source record: 45037

The city I live in is preparing to install a new digital TRS system within the next year or so with an interesting capability - they intend to have the helo shooting video and sending it back to dispatchers and officers on the ground to help coordinate operations.

I'm guessing that they plan to use standard mpeg video compressed down and encoded using RD/LAP 19.2k encoding which is then streamed over a specific analog talkgroup on the system or thru a dedicated data frequency (not the greatest picture in the world but it would suffice). I doubt if they would encode it using P25 encoding since that is only 4800 baud which would provide even worse video quality.

Theoretically, all one would need is the 785D or 250D (because this system, which is already in the testing phase, is using the new motorola control channel format), a discriminator tap installed, and an RD/LAP radio modem such as a VR500 or MXCOM Ev9000 board, and something to play back the captured video file such as Media Player or RealPlayer.... it can't be THAT easy, can it??? Well it might because they also plan to use windows based Forte workstations instead of the MDT9100 terminals they are using now - another reason to suspect they will use some form of windows based media viewer/encoding...but I could be wrong.

Anyhow, just curious if it had been done - no sense in reinventing the wheel. I love a good challenge and what a great reward for the effort - live video as well as audio of chases, fires, etc... too cool..

They will scramble with a device called MacroVision. One piece on each end of the system. Not as pricy as some but not something you will be able to decode.

Wooden shingles for the most part are pretty dry and reasonably transparent at that frequency. But, when it rains, expect the old shingles to absorb some water and attenuate significantly. All will depend upon the age and water absorption of the shakes. One thought would be to spray a water seal product on the shakes just over the antenna, perhaps it would shed a little water?

you might get a data stream,which would be fairly useless without something
to decode and display the video image with.
If you have access to a wireless video device why not grab a frequency
counter and find out what freq it transmits on.
I'd say offhand that it would be more economical and sensible to just get the
proper receiving device in the first place.

Just ordered an Icom IC-R2. Should do the trick.
It is illegal to listen to the cops in the UK but lots of journalist ambulance chaser types do it. Never heard of anyone being charged but I don't doubt that they would if you did something that caused them inconvenience. As for TV detector vans its assumed that every house will have a TV. I think they just go round the ones that don't have a licence and peer through the window. The detector vans are just to cause paranoia. They really ought to do away with TV licencing it but those civil servants just love collecting information.
Regards
Steve

I need to change the batteries in my Icom R-100 scanner. Can anyone who has done this procedure tell me the part number for each battery, or the battery number itself. There are two: one for the CPU and one for the clock. If you have the technical manual can you scan that page and email to me. Any help would be greatly appreciated. Pat, K4AVO (All Icom)

Well that stinks...

I don't know if this city will do it that way or not. The sheriffs department here is run by a neo-fascist who is ultra paranoid about the radio system so he encrypted it. Problem is, the system drops transmissions in the clear let alone encrypted. Rumor has it he had to take out the encryption so that the department could use its' 90 million dollar radio system anywhere else except the middle of town. It's so bad the deputies all carry cell phones because the radios only work maybe 60% of the time - WITHOUT encryption...

Is that what is used in your area? Just curious how you know that....

Or get from Radio Shack their telescoping antenna w/BNC connector. I can get Radio New Zealand, aircraft over the Pacific, and other stations on SW. I'm still learning my '500 but it travels with me. I also have a solar battery charger and keep 4 fresh AA's ready when needed. Saves on a LOT of cash, and I always have batteries available. But it's great to know I can take it anywhere and listen to anything I want. Also, there is a program on the web for adding Narrow AM to it. I'll find the website and pass it on. Good Luck and Good DX, Eric KA6USJ

They have a very good exhibit on Radio Communications at this museum. Have a "working" bridge with a spark gap transmitter, and crystal radio. Various VHF receivers, one with a direction finder attached. Displays of early transmitters and receivers. Sounds of various broadcasts, and reminisces, a complete Ham radio station using a Liberty Ships original equipment, and probably a few things I missed. Admission is free, though they do ask for a donation. Give what you think it's worth. The rest of the museum is worth looking at as well. One thing though, the place is not handicap friendly. The ham station is on the second floor and the bridge is on the third and NO elevator. Other than that, if in 'Frisco, check it out!!!! Eric KA6USJ

1542. tk120 v0.6 software for Yaesu VR-120 available

Newsgroup: rec.radio.scanner
Date: 2002-08-13 15:53:00 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d592b6a$0$1420$272ea4a1@news.execpc.com>
Source record: 44981
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

The Yaesu VR-120 portable receiver is a currently
a steal at the closeout price of $109.
You can get one from Ham Radio Outlet, The Ham Station,
Amateur Electronics Supply, etc.

tk120 is an open source programming utility for the
Yaesu VR-120 and VR-120D portable receivers.

It runs on Linux, Windows, and (perhaps) MacOS X.

Improvements in version 0.6 include:

-Fixed bug in the Flex Step logic.

-Users can now change the band edge frequencies.

-Added new Smart Search single/continue, attenuator,
VFO frequency, VFO mode, and keypad lock controls.

-Added another Dual Watch bank (A--, b--) and another
Limit Search bank (L--)

-Memory channel import from a .csv file now tolerates
lines with missing trailing fields (i.e., too few commas).

-Added control over several flags in the Experimental Tweaks applet.
You can change them (at your own risk) and observe the effect on
radio behavior.

You can learn about and download a beta test version of tk120
from my home page:

http://parnass.com

Thanks to Russell Hall, Gary Kinsman, and Torsten Grochowski for
testing tk120. Jim Vincent, KC7RYD, and others helped by
sending me image files from their VR-120s.

I don't warrant the software, though it will cost you nothing.

1543. BC-200 XLT mod question?

Newsgroup: rec.radio.scanner
Date: 2002-08-13 16:29:35 UTC
From: Steve Painter <stevepaint@clearwater.net>
Message-ID: <Zwa69.16390$QV2.2278@news.webusenet.com>
Source record: 44982

I have a Uniden BC-200xlt that I'm trying to mod for cell phone reception. The problem is trying to identify the correct resistor that needs to be cut.

www.mods.dk says to: Locate the (64 pin quad flatpack) microprocessor IC labelled "UNIDEN UC-1147" and the 10k ohm (brown-black-orange) leadless resistor positioned above the letters "DEN" on the IC.
Using miniature wire cutters, cut the resistor body in two without disturbing anything else near it. If the left solder pad comes loose, it may be peeled from the board. Brush or blow away any residue. This completes the restoration.

The problem is, that there is no brown-black-orange resistor above the words "DEN" on the IC. There is however what I think to be the resistor in that it's a small 1/8" all black, flat component, with the number 103 in white letters on top. Is this the correct resistor? Any help would be appreciated as the diagram given in the above website leaves much to the imagination.
Thanks in advance!

This is an Anttron vertical base scanner antenna. It covers
30-1200MHz. The antenna consists of 4' fiberglass whip, with a 46"
aluminum radial.

Can purchased with "Buy it Now" before bidding.

I'm not entirely sure this is the correct resistor, but brown-black-orange =
103. Sounds like instead of a minerature resistor in older models, they
used a surface mount resistor.

Is there no help for the widows son?

Does any one know how to make a change in the BC-560XLT to retain memory?

My scanner loses it's memory after I turn the power off in my vehicle.

Is there a remedy to this?

Hi, Im looking to tweak my antenna and was looking to get a SWR Meter to monitor signal strengh. I see Radio Shack sells SWR Meters but they go from
3 - 30 MHZ. Since just about everything I listen to is above this range, will the meter still work?

Do they make a meter just for scanners, or can I use this CB type???

Sincerely,
Rich

"Steve Painter" <stevepaint@clearwater.net> wrote in message
news:Zwa69.16390$QV2.2278@news.webusenet.com...
I have a Uniden BC-200xlt that I'm trying to mod for cell phone reception. The problem is trying to identify the correct resistor that needs to be cut.

www.mods.dk says to: Locate the (64 pin quad flatpack) microprocessor IC labelled "UNIDEN UC-1147" and the 10k ohm (brown-black-orange) leadless resistor positioned above the letters "DEN" on the IC.
Using miniature wire cutters, cut the resistor body in two without disturbing anything else near it. If the left solder pad comes loose, it may be peeled from the board. Brush or blow away any residue. This completes the restoration.

The problem is, that there is no brown-black-orange resistor above the words "DEN" on the IC. There is however what I think to be the resistor in that it's a small 1/8" all black, flat component, with the number 103 in white letters on top. Is this the correct resistor? Any help would be appreciated as the diagram given in the above website leaves much to the imagination.
Thanks in advance!

You need to read up on what a SWR meter does. It is for matching the transmitters to a load, not for receiving.

A reciever will work sort of backwards. If it were possiable to use a swr meter to match a receiver you would have to put it at the antenna and then tune the input of a scanner to the best match.. Over a wide range of frequencies that a scanner will have it is not possiable (at a reasonable cost) to match the receiver to 50 ohms.

Unless something is very wrong the swr of a receiving antenna does not make very much differance.

Presumably because cell phone images could be received when tuned to
those frequencies.

you have to transmit to use an SWR meter.... I'm sure that would be in violation of the FCC rules.... what you need is a noise bridge and tune for max noise.... However if your antenna has a mismatch you won't be able to tell it unless its REAL bad like open or shorted.... its really not worth the trouble

No, these SWR meters will not work for tuning a receiver. They are designed to work with a transmitter, and their meter indications are derived from the transmitted power. And, of course, they do not work over the frequency range of a scanner, typicaly 30MHz to 900MHz.

There are self-contained SWR meters which will work without a transmitter, but they are usually limited to frequencies below the 145MHz ham band. And, they are relatively expensive ($200+).

There are also some gadgets which use a noise source and the receiver to match an antenna to the receiver.

Check the MFJ Enterprises site

http://www.mfjenterprises.com/index.php

Scanners marketed in the USA must
reject cellular phone signals by at
least 38 dB -- so says the FCC.
Yaesu probably couldn't meet the FCC's
minimum requirement in those frequency
ranges and blocked them.

I sent you FCC RM-9002 by email.

1580. APCO 25 Digital Standard

Newsgroup: rec.radio.scanner
Date: 2002-08-14 17:43:14 UTC
From: studio@ll.net
Message-ID: <3d5a929d.5394326@news.ll.net>
Source record: 44867

Police departments in the metropolitan Twin Cities area are converting their entire police and EMS operations to the new APCO 25 digital standard.

This digital standard means that communications between police and dispatchers will no longer be audible on available scanner radios. The police have been given the right to decide who can own such equipment, and who cannot. In fact, even news agencies will be allowed to own the receivers, but the police will have the right to restrict the radios to certain channels,and are not required to open the entire spectrum of their communications to outsiders. The radios themselves will sell in the $3,000.00 range, putting them out of reach for most hobbyists.

Starting very soon, scanner hobbyists will no longer be able to listen to the Minneapolis or St. Paul Police, county sheriff, ambulances and the like.

This is a trend which is sweeping the country. Along with being touted as a "better" technology, the change to digital is being explained as part of our nation's War on Terrorism.

Aside from being a disappointment to scanner enthusiasts, the introduction of this new digital technology brings forward a question of basic rights of the citizenry to supervise their public employees.

This is quite serious; unlike analog 800 MHz trunking, narrow-bandwidth VHF/UHF FM communications and the like, citizens will no longer be able to monitor their local police. This might not be to threatening to many, but remember that the abuses of the LAPD vs. Rodney King came to light, because a scanner hobbyist was monitoring police radio and MDT traffic.

As citizens of the United States and of our home States, we have the right to supervise those who are charged with serving and protecting us. This is not an issue of a small group of hobbyists being denied entertainment or amusement. This goes much, much further. I fear that police departments when left unsupervised become secret police. Ask anyone who lived under Communism in East Germany, who survived the abuses of the Iranian Savak, the KGB, or Central American death squads if you can always trust the police to do what's right and legal.

I urge you to get to your local City Hall and scream about this. Write letters. Demand the right of oversight.

Bloomington is not converting they have their own edacs system. The burbs are slow in embracing the digital as it cost $$$. I'm not sure when or even if MPLS is converting, I've heard that they are but.....We'll see how many have actually converted their departments over in a year or two. No big deal, just get the new digital trunker from Uniden.

1585. Re: DJ-X2000 disappointments

Newsgroup: rec.radio.scanner
Date: 2002-08-14 19:33:17 UTC
From: keith <mke65@attbi.com>
Message-ID: <e3bllus7eao79v6tc3200rcpfc64efck6d@4ax.com>
Source record: 44872

Having owned among others the aor 8000, 8200, yupiteru 9000, Radio Shack pro37, 92, rs2006, I can say this is the best radio up till now.

Flash Tune I have received many many frequencies in the area I live in. I take it to the game and it picks up all mic activity by security, vendors, line coach etc..., I walk down the street in seattle and it picks up security, police, transportation, etc (but does not pick up pagers like some other frequency counters I have owned scout,

Inversion scrambler works... and yes people do still use inversion in the Coast Guard and Maritime.

Audio Rocks big time. Send yours back because it might be faulty. I have heard of instances where the radio needed work on the speaker because it was broken or not wired correctly. If it isn't shouting then it is not working correctly. Audio is not a weakness of this radio

Scan Speed on the Radio now that's another story. you are forced to keep frequencies in the same range on the same bank if you don't want to suffer the slowdowns this radio experiences when moving from one frequency range to another. but that is fixable by keeping the 150's in one bank and the 400's in another bank etc.... But set up like this the radio can still only hit about 15 channels per second.

Two hand operations. Well the radio cost 500 bucks. Do you really want to input functions with only one hand.

No radio is perfect but find a radio that has ctss, flash tune, voice inversion, 2.5 minute audio recorder, computer control, 2000 channels in 50 banks, and gets great reception from 0 to 1000 mhz. I have tried the options and I have not found one yet. This is the closest thing.

It doesn't matter that laws restricting interception of the former cellular frequencies exist. With PCS and other digital modes, interception of cellular is impossible in many areas.

It's just like the old hobby of interception of one's neighbors' cordless phone calls. As 49 MHz phones disappear, who cares?

The ECPA has become a useless, "fake" law. Er, well..that is until the frequencies are reassigned to military and police agencies.

SWR meters are pretty useless without a transmitter. You need to be
able to send enough power up the antenna to be able to measure the
reflected energy. If you are looking at pico watts coming down, the
meter is worthless (and it really is pico watts)...

To be honest, SWR tends to have little impact on receives unless it is
really and truly out to lunch. That's why antenna inputs are often
simply labeled as Low Z, and Hi-Z. anything from about 30-100 ohms is
low Z. Anything above that is considered High Z.

it is an issue for transmitters because it wastes power and can heat
the transmission line, in fact if it is really bad, the transmission
line can actually catch fire (like transmitting on the 40 meter band
using an 80 meter half wave dipole....

As others will no doubt point out, Uniden is about to have it's new APCO 25 digital scanners FCC approved, and should have them on the market this fall. Price is expected to be around $700.00 (with the digital option card).

To the best of my knowledge, no police departments, or local governments, have been given the right to decide who can, or can't, own such equipment. What is the source of your information?

HORSE-pucky!

ANYone can buy a Motorola Astro radio, and have it programmed
for digital systems, you DO NOT need permission from anyone for that.

>In fact, even news agencies will be
>allowed to own the receivers, but the police will have the right to
>restrict the radios to certain channels,and are not required to open
>the entire spectrum of their communications to outsiders.

Again, they don't have to GIVE you the talkgroups, but they CAN'T
stop you from reprogramming the radio for anything you want to listen to.

>The radios themselves will sell in the $3,000.00 range, putting them
> out of reach for most hobbyists.

Under $2000, but close enough, until the digital TrunkTracker
comes out in 2-3 months.

> the change to digital is being
>explained as part of our nation's War on Terrorism.

Nope, that's NOT what they're saying, unless 'they' are idiots.

Yes, absolutely. Did the 12 volt power supply come with the receiver? That's strange. I would call the company about that. Anyway, in general you should always use an adaptor with proper voltage. General recommendations are that you should NEVER exceed +15% or -5% of the recommended voltage. In your case, that's between 11.4 and 13.8 Volts. 16.8 Volts will damage your radio sooner or later.

You think so huh? Go to your Motorola dealer and tell them you want an Astro programmed for whatever it is you want to "listen" too. They do NOT have to sell it you and in most cases, as a friend who works for a traffic reporting company found out, they will not sell it to just anyone.
The PD's in this country are switching to digital for a reason. If we the listening public can listen so can criminals and terrorists. I agree that we should and do have the right to listen. But it doesn't give us the right to go buy a radio in order to do it.If your not a licensed user you have no need to have a radio.
Uniden is doing a good job keeping up with the technology so stick to the scanners.
If you really want to listen that bad, you'll find a way.
If its out there, we'll find a way to listen.....
Not worth getting all upset over.

My BC-55XLT will lose memory IF I turn off the car leaving the external power cord attached. It has a 12V power socket that is switched on and off by the igniion switch.

John,

Is that measured without beeing attached to the radio?

Open circuit voltage is higher then when under a load. (except regulated supplies)

Have you measured the voltage with the scanner attached?

This is the power adapter that came with the unit?

Odds are the power supply is an unregulated one, and you're measuring the no load voltage.

The radio must have an internal regulator, as the adapter is used to charge four AA nicad batteries, and even 12v is much more
than you need for that.

I wouldn't worry about it.

Regards,

Mark

1599. Info Req'd on Icom set

Hi

Recently acquired two Icom P4CT transceivers, I believe them to be UHF FM <?> but have no idea where they were purchased from or what they are able to pick up. One has a complete scale from 00.01 to 1600.00 <?> the other seems locked in a smaller frequency range, and I can not change its settings.

Anybody have any idea what they are , what they do, what they are worth and how would I go about disposing of them? I appreciate any information.

TIA

C

Are you getting an "L" on the display when you turn the scanner on? Have you noticed it takes longer and longer for the scanner to power up?

If so, you may have a capacitor failing (or already failed) on the microprocessor board.

The microprocessor board stands vertically just behind the control panel. The front panel can be easily loosened by removing two screws on either side of the scanner. Go ahead and (gently!!!) remove the two plugs on the cables that connect between the main circuit board and the uP board. The failing capacitor, C209, is located at the notched corner on the circuit board.

The original cap is an aluminum electrolytic, .47 uF. I suggest you change that cap to a .47uF tantalum.

Good luck! Hope this takes care of the problem for you.

The reason for digital is bandwidth. Digital takes up less frequency
and they can also communicate with different agencies and departments
almost seamlessly. Not every place is going to digital. It's
expensive and they will have to sell the project to the taxpayers. I
don't think they really have a priority of which is people listning in.
Some communities will connect to the digital system but within the city
they will stay with their own network.
The new Uniden scanner is not yet out and it's unknown how the digital
plugin module will work or not work with a particular system. So, I am
going to wait and see.

1602. ScanStar Tech Support Problem

Newsgroup: rec.radio.scanner
Date: 2002-08-14 23:49:06 UTC
From: Rich Wood <richwood@nyc.rr.com>
Message-ID: <n0qllugogmunljhm2qd39lq8ngag9buprg@4ax.com>
Source record: 44892

I purchased an upgrade to ScanStar Spectrum Explorer from Scanners Unlimited for use with a Realistic Pro-92. I realize the radio can't be controlled by the software but all the info I have on the software says I can program it.

I installed it and configured it for the radio (which appears on the list of supported receivers). Whenever I access the configuration screen the radio shows up as installed. When I activate the program and try to select the radio it isn't there.

ScanStar, I found out, only offers email support. I sent email and waited. four days later, after getting no response I called the company and was told by a very nice lady that the tech was not available but he'd be happy to call me as soon as he could. No call.

I received an email telling me email was the only option and a sarcastic "what's your problem?" response to my inquiry. I responded with an email commenting on the terrible tech support and, again, explained the problem. I'm still waiting for a response.

Has anyone used this combination with any success? Or, have I been screwed? It would seem to me that a radio that's listed in a configuration module would be supported. I have this feeling I'm going to be told I have to buy something else (I already have the cable) to make it work. There's no paper manual and the online help is spotty, at best, making no helpful mention of my radio. Any help would be appreciated.

Or, is there some other software I should look at that might be less of a hassle?

Rich

well the state of Pa is switching to APCO 25, they've had over 100
800freq.,s for over 15yrs and are currently trying to aquire more from the
counties that already have them in trade for equipment and usage, so its
already in the works.
but your right DJ, digital is much more efficient than analog and that's why
all the cell phone companies and NEXTEL use digital.
the current CDMA technology allows up to 12 digital channels on one analog
channel, so it has great advantages over analog other than just privacy
but we'll all find out soon enough

Not so. Uniden has two models of digital-capable scanners due out
within the next few months, if they can stick to their current schedule.
The "police" have no control over who buys or listens to these radios.

>
> This is a trend which is sweeping the country. Along with being

I gotta agree with you on that as a general principle... a lot of
constitutionally-questionable stuff is being shoved down our throats
under the battle-cry of "homeland security" since 9/11.

> Aside from being a disappointment to scanner enthusiasts, the
> introduction of this new digital technology brings forward a question

> threatening to many, but remember that the abuses of the LAPD vs.
> Rodney King came to light, because a scanner hobbyist was monitoring
> police radio and MDT traffic.

Not so. The person who filmed the Rodney King beating, George Holliday,
heard the sirens and commotion and went out with his new video camera
and filmed it. After a phone call to the local LAPD division station
got him nowhere, ("The policeman on the phone gave me the run-around" he
told a reporter) he took the video to a TV station, who in turn took it
to LAPD, who began an investigation. By that evening they were
interviewing Holliday and other witnesses. LAPD Internal Affairs
detectives obtained the radio and MDT recordings, found the offensive
stuff, and it was eventually made public.

>
> As citizens of the United States and of our home States, we have the
> right to supervise those who are charged with serving and protecting
> us.

If we think we're somehow "policing the police" or tracking our taxes by listening to them on the radio we're only fooling ourselves. In big-city police departments, only a relatively small percentage of the employees are out on the radio. And what do we generally hear on the radio? Where they're being sent and what the calling-party told the operator was going on. Not much else. Unless it's a real crime, then we hear what they looked like and which way they went. The officers may be out an hour or two, but the radio gives us absolutely no clue whatsoever as to what they're doing. Are they goofing off? Taking a bribe? Meeting a girl/boy friend for hanky-panky? We'll never know from listening to a scanner. Comforting a distraught victim or widow? Helping reunite a separated child and parent? Making a death notification? Following up on a robbery investigation? The radio doesn't tell us any of that stuff. Occasionally an aberration like the Rodney King debacle will generate some incriminating radio messages, but that's about it.

And that's just the patrol people. There are a lot more employees behind the scenes who seldom if ever say a word on the radio... detectives, support services, SID technicians, office pogues and paper-pushers, personnel, records, tactical planning...well, you get the idea. They "spend" a lot more of our dollars than the patrol coppers do. What goes on over the radio is really a pretty insignificant clue as to how "our employees" are spending the money we entrust them with. It can be the exciting part, of course, and better than most anything on TV or in the movies.

It's only my opinion - and you'll not find a bigger scanner fan than me anywhere - but I think we sometimes come up with highfalutin, even disingenuous reasons why we simply MUST be allowed to listen in. At the very bottom of it, I think most of us just LIKE to listen. After all, it is the best show in town.

>
> I urge you to get to your local City Hall and scream about this.
> Write letters. Demand the right of oversight.

>
> N0YPS

I doubt that our bought, paid for, and elected representatives down at
city hall want to share that job with the rest of us, any more than they
absolutely have to.

Wire the scanner directly to the battery, a wire under the dashboard that stays hot when the ignition switch is off, or a fuse panel connector that remains hot when the ignition switch is off. This places the burden of turning off the radio to prevent battery drain on you, but your memories will be retained.

>programmed for whatever it is you want to "listen" too. They do NOT have to
>sell it you and in most cases, as a friend who works for a traffic reporting
>company found out, they will not sell it to just anyone.

A) I never said go to Motorola, did I??

And

B) I've never heard of Motorola or a Motorola dealer refusing to sell a radio to anyone.

There are dozens of Astro radios listed on ebay.

> But it doesn't give us the right to go buy a radio in order to do it.
> If your not a licensed user you have no need to have a radio.

There is NO SUCH THING as a 'licensed user', OR any license needed to have a
radio capable of monitoring Police traffic, EVEN if it's digital.

There ARE some areas where you need a permit to have a mobile scanner,
but that's a TOTALLY different thing than what you're saying.

Would you like to see a picture of my Astro radio??

I'm curious as to what the appeal is to listen to cell phones. With today's digital cell phones, I can't imagine there's much to listen to anyway... all you'd be able to recieve is analog phones and I doubt there's many of those still in use.

Once when I had temporarily installed a ham-band ground mounted vertical antenna for testing I left the RG-8 coax cable laying in the grass. The cable
got damaged somehow (kids and pets running around the yard.)

This damage wasn't immediately apparent since I was able to receive rather well on all the frequencies I tuned to. But no one seemed to be answering my calls even though the transmitter seemed to load into the antenna.

An SWR meter (used with the transmitter) showed a 5:1 vswr. Some-one had tripped on the cable and pulled the connector shield slightly apart at the antenna end of the cable. This only showed up on transmit ... I continued to receive OK until I could fix the coax cable.

Just about any external antenna will work wonders for your reception. Lots of scanner listeners use discones, since they cover a wide range of frequencies. I'm sure you'll get a lot of different answers as to what antenna is the "best." Basically it depends on your situation.

Whatever antenna you use, be sure to use good quality coaxial cable.

If you are looking to monitor the local police laptops, they use cellular packet data to communicate. This is generally thought to be encrypted because it carries NCIC data. The CSP uses its own system utilizing 19.2 RD-LAP. There is not a program that has hit the internet yet to decode it but I had seen postings that one was rumored to be coming. This traffic would likely be encrypted also.

No but they could encrypt the entire system or just channels of a "sensitive nature".

Of course we can shout about it all we want but just look at general public opinion. I see it in every "man on the street" VOSOT I watch on the news: We've gone from a nation of freedom lovers to a nation of big fat spoiled babies who'd give it all up tomorrow in the name of "safety". Problem is, those spoiled babies VOTED to allow this to happen and will continue to vote this way with each and every perceived risk that is brought to their attention. Smoking bans on public sidewalks and car battery warning labels are just some of the assinine laws we've passed because of the perceived risk to public safety. So ask yourself what's next?

Hmm. Scanners Bad. Government Good. I feel so safe with that camera on my sidewalk.... and so on.

Australia is looking better and better each day...

Uh huh. Sure he would have.

Cheek was king of radio hacking but even he had his limitations. Cheek didn't have the money to get the necessary documents to figure it all out and even if he did, do you really think he'd be stupid enough to take on the feds and motorola's legal department AGAIN?

Building a 4 level FSK is one thing. Building and adding an APCO25 decoder circuit and IMBE vocoder card from scratch is another. And doing it cheaply/simply enough for the average hobbyist? Oh that's a good one, ROTFLMAO.

Cheek was no dummy. If he were still alive he'd be monitoring SDPD on his Astro Saber and laughing at you while tipping back some brews with Bud.

Read the Bill of Rights,

The government is never given rights. The *people* may grant the
government certain rights, but much more commonly, the government
usurps rights.

This of course is the way things were set up originally, and still the
law. But everyone is so busy watching sports, playing the lottery,
whining about saving the whales, downloading pornography and wrapped
up in all kinds of causes to care about our country being yanked out
from under us.

You might look into the Yaesu VR-500. Runs on two AA's. Has a thousand channels. Fits in the palm of your hand. Tunes 100Khz to 1300Mhz with the usual gaps. Has AM, NFM, WFM, LSB, USB, and going to Parnass's website, you can also add N-AM. Has a bandscope. It is also computer programmable with the proper software and cable. I have one and take it everywhere. Does not do trunking though. My 2 cents worth Eric KA6USJ

The radio itself will regulate the input power to 12volts, Mine is exactly
the same 16.8volts. if it were 12 volts only, there would not be enough amps
to run the radio without the batteries in.
this is how they are made

Source record: 44929
Cross-posted to: rec.radio.scanner,rec.radio.amateur.homebrew

Ok, first of all the disclaimer:

*** I AM NOT IN THE USA AND YOUR CORDLESS/CELL PHONE LAWS DO NOT APPLY HERE. ***

Now, on to my question.

I would like to know if anyone has the exact frequencies used by a Sanyo DSS 2.4ghz cordless phone, model CLT-2410 (or similar 40 channel Sanyo phones).

I would like to adapt the plans for a 2.4ghz wireless network colinear antenna I built for my wireless network to my phone and at those high frequencies, a few mhz and a few milimetres does make a big difference.

This BTW is to be used at my fishing shack which is really in the middle of nowhere (lake with 2 houses on it), so interference to others is really not an issue. I am on one side of a lake with no phone or electricity (or roads) and I want to use a cordless base which will be at my sisters across the lake (she has power and phone service). I am already sharing her internet access with a 2.4ghz wireless network we put up and it works perfectly (though sharing a 56 K conection that barely connects at 28.8 at the best of times is a little tedious!).

As it is the cordless phone baaaarely works on the front porch, a decent colinear like we use for the wireless network would be perfect (btw we did try a yagi for the wireless network, worked fine, but with the colinear signal is just as nice AND I can be sitting in my canoe anywhere on the lake and "working" on my laptop while fishing (keeps the boss happy)

I) It can be unblocked.
2) At what it can do, not too many radios can do it better.
Sensitivity and Selectivity are excellent.

I still have one, and I also have the BC-780XLT. They both go for the
same price used. If I had to chose one, I'd definitely keep the 780.
It's much more radio for the price.

ya. I have seen both of them too. Only good thing is. CDPD is on a dedicated analog 800 cell frequency. I think here from talking to someone. and from my knowledge. there is only about 3 frequencies that I have that handle all their terminals.

are you sure the coax did not get wet inside ? One of the main things you learn when you get your ham licence is. Keep the coax inside the black casing dry. Once wet. it will slowly work its way to your connector at the radio and corrode it. Thus = to loss of reception or crappy reception. Maybe there is a short inside the coax now. center pin split inside the coax will do it too. Did you Fix that connector that you said the shield slowly moved away from. 1 small wire from the sheilded braid will cause problems too, even though it is hair thick. if in doubt. why not run a new line.

I always considered the hyperscan a wonderful feature and the
cell-phone conversations a pain in various portions of the anatomy.

I like listening to my scanner as a hobby. If I wanted to eavesdrop
on "private" conversations, I'd get a job as a Fed.

As some have stated here before, the power supply will have an output of
16.8 V when it is not under load, but provide the correct voltage when used
with your receiver. I stand corrected. May our friend Ohm forgive me ;-)

greetings,
Manuel

Well Bob, lots of people in here list cell monitoring, but that's really just the tip of the iceberg.

Bill Cheek was a big fan of the 2006 - he was one of the first to successfully mate the thing to a computer and came up with lots of other neat tricks for it too.

For instance - the average scanner has 500 to 1000 channels in it. Well back in the 2006's heyday 400 was about as many as you could get off the shelf. Cheek came up with a relatively cheap and easy mod that increased the total possible # of channels to 64000 - now THAT is a scanner! 64000 channels all waiting to be effortlessly programmed by even the most rudimentary of computers. This was back in the days when uniden didn't even think about the TrunkTracker - that was just a big pipe dream for the hobby back then.

Tons more mods have been done to this radio - too many to list them all here. Just do a google search on "PRO2006 modifications" and you'll see what I mean.

I don't remember if the 560 uses a battery of if it has a capicitor to
retain the memory.... check for a battery first. if you don't find one
then the cap will be a short electrolitic...

If you want a small scanner you can actually hear, there is the Yaesu VR-120 which is going for about $109 these days. It isn't as sophisticated as the VR-500 though. No SSB, 640 memories but can still be programmed via computer. The 120 also has more gaps than the 500... I personally own a VR-500 but despise it's anemic amplifier (Bob Parnass's words)

I liked and respected Bill and Cindy, and regret his passing.

Seems to me, a 64000 channel scanner is merely a receiver with a VFO.

My current FM stereo has 100 'channels', i.e. it steps every 200 kcs
from 88 to 108 megacycles.

My old stereo had a continuously variable tuning dial, analog of
course. It theoretically had an infinite number of 'channels'.

has anyone built a 4lvl fsk and got it to work. What I am wondering. Since the 4 lvl uses a quad op amp. Why can't we build 3 2 lvl fsk's. Bridge the demodulator input. and used each 2lvl op amps for the 3 pins needed beside ground ? I know one op would have to receive negatively too. I never got a 4 lvl to work yet. I know it is probably due to the Power supply. I have made a few 2lvls for myself to decode our ax.25 and such. Since I have always got the non 741 chips to work well. Why can't I use 3 ops to =1 4lvlfsk ? Has anyone tried this or got it to work.

The four level circuit is sensitive to pulse amplitude while two level circuits are not. It doesn't matter how many two level circuits you connect together or how you wire them, they will not function as a four level detector.

Likewise, the BC-560XLT will lose memories if connected to a power supply that loses power or is turned off. The power supply cord disconnects the internal backup battery (a really bad design, but there were several radios that came out during that period like that).

Again, the only choice is to either wire the radio directly to the battery (either through a wire to the battery or a wire under the dashboard that is not disconnected when the ignition switch is turned off) or unplug the power connector from the scanner before turning off the car's ignition switch. Since disconnecting the power connector is not reliable (far too easy to forget), the best solution is to wire to the car battery.

You can pretty much assume it is in the 2400-2483 MHz band, perhaps toward the lower portion of that frequency range, although the different channels may have some of them in the higher part of the band. For that matter, the Spread Spectrum is probably taking up a large part of the band at the best of times.

At least, according to how they are meant to be in the USA....

This, by the way, is most likely the identical frequency range your 2.4 GHz wireless network is in.

Oh yes, the upper part of this range is overlapped by signals escaping from microwave ovens. They are more or less around 2490 but the frequency control for a microwave oven is crude and they are often down in the band used by wireless telephones and wireless networks.

Check out Ebay for old Minitor 1 pagers (they were those big clunky
red or black brick of a pagers most volunteer firefighters and EMS
people would carry around before the newer and much smaller Minitor
II, III, and IV came out).

They are crystal controlled and you should be able to buy one for a
song (and then just have it recrystaled to the frequency you want).

On the radios I have seen, the resistor is a surface mount or "chip"
resistor. It will usually be little black rectangular part with solder
connections to the PC board pads at each end and be marked "103"
(for 10 K ohm).

All you have to do is remove it and make sure you don't have any
solder bridges.

It may be a bit "over the top", but the AOR AR8200 has a nice spectrum
analyzer that will graphically display which channels are in use.

As usual John Mackey can't resist an opportunity to post to a thread where a message bears Bill Cheeks name.

Let me ask you something John. All of us are very aware of the contributions made to this hobby by Bill. Bill was the defacto pioneer of computer controlled scanning and digital signal decoding. Without his contributions it is entirely possible that the 780xlt I'm listening to right now would not exist. That's pretty damn signifigant isn't it? I don't even come close to what he's done for this hobby. None of us do.

Now tell us: What have YOU done for the hobby, other than post a bunch of off topic noise in this newsgroup? What contributions have you made that helped make the modern scanner what it is today? Nothing. Nada. Zilch. Zip. None. Absolutely Nil.

And all because of some ridiculous Fidonet nonsense from so many years ago that only YOU seem to remember it.

The man is dead John. Get over it.

1679. Yaesu VR120 programming cable help

Newsgroup: rec.radio.scanner
Date: 2002-08-16 17:08:27 UTC
From: Tom Sedlack <cts050@email.mot.com>
Message-ID: <ajja82hip1@localhost.localdomain>
Source record: 44820

Does anyone have information on the programming cable for the vr-120 radio? From what I've gathered so far, the cable goes between the PC RS-232 to the earphone jack with some 5V level shifting in between. The connections are made using a 1/8" mini-stereo plug using the 2 ring connections (the tip is not used). I'm guessing the TX and RX go to the two ring connections but how does the radio get the ground for reference?

Also, any command syntax information would also be appreciated. I was looking to write something to load freqs since there is no direct entry.

Thanks,

Tom

No, this beast he created (you can see it in the 3rd modification book he produced) could actually store 64000 memory channels. Unreal.

If I remember it right (it's been a while since I perused the book) It basically had a 16 position rotary switch that turned each "superbank" of 4000 channels on and off, and a series of toggles that activated up to 10 400 channel "banks". I mean this thing was just sick....

Imagine 160 2006's all lined up in a row. That's technically how many channels you could stuff in Bill's "turbo whopper" as he called it.... and then he rolled the CE-232 and stuffed that in there so the computer did all the work. Beautiful...

Both have a history of spamming this group with off topic noise and nonsense, both have made unbelieveable and ridiculous claims in this newsgroup, and now they are trying to stir things up with their own petty little peeing contest...

Could it be that they are infact ONE and THE SAME?

Has Mackey finally gone off the deep end? Has the medication finally taken it's toll? Maybe they did more to him in the Navy then he's letting on....

So John (or is it Emilio now)? Any comments?

I'm sure you'll have lots to say on this.

Enjoy talking to yourself.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm using (after many failed tries at building them) ....
the Texas 2-Way http://www.texas2way.com/ddmp.html
4 level slicers and they work extremely well. They have level controls
, built in , but I have never had to mess with the levels worth
mentioning as THAT model seems fairly flexible about it's
input level.
I " HAVE " found , however , that not all scanners are equal ,
even of the same type. I have a " LOT " of pro-2005s and 2006s
(12 in all) and a number of them (4 , about 1 /3 rd) do not
perform well with the 4 level slicer. ALL of the RS pro-2006
government contract models I have (6 of them ... as sold by
Hammerheadtech.com
....http://www.hammerheadtech.com/Merchant2/merchant.mv?
Screen=PROD&Store_Code=HT&Product_Code=RealPro2006 ,
.... identifiable by their absence of the RS name on the front
and the commercial " factory " mods inside) .... work excellent
with the 4 level slicer ..getting nearly 100% performance on all
slicer related programs I run on them . (especially Banapia,
Pdw-v102 and Mobitex ..for example)
Maybe you have had better success with your slicer building than
you realize and your scanner either isn't a good match to it or
it's I.F. bandwidth of I.F. signal fidelity isn't adequate for a 4
level slicer. Worth considering , anyway.

Krackula ....

when you consider your time , trouble and parts cost ..not to mention
factory support and return / repair resources ... buying a 4 level
slicer (especially proven performance types like the DDM-4-P)
is a good value and choice.

There is a program at http://parnass.com/tk120/

Cable schematics that might work with the VR120 are at
http://www.icongrp.com/~sllewd/pcware.htm

One place to purchase the cable for the VX-1R/VX-5R is Bill's 2 Way
408-782-0064. It's a MAHA mic cable MHS-PLG-Y . Costs is $6.00 (this is
just the 4 conductor plug with cable).
http://www.garlic.com/bills2way/equip/maha_speaker_mics.html

I have not personally tried any of these items and the information is
offered to give you a place to start in finding something that will work.
Good luck.

most of these models are canadian and they work fairly well decoding a variety of signals. but. I forgot about texas and will look there again. I have a electronic wholesaler so it was starting to get cheaper. but only a bit. I know it was probably the power supply on mine. but. I may have screwed it up somewhere too. hslicer is a good prog to use as a test. but. hmm. Could be my comport too. a few parallel hardware don't work. on the other machine they do. I guess my board isn't pushing as much voltage lately as it used to. cause lots ran before but not now. lol. Time to get another board too.

thanks krack. I will go there again and see if they send to canada.

x-noarchive:yes

Anyone have experience using this $40 "Spider" Base antenna??
A buddy reccomended it, & says that all the upward elements are
"active", & the Downwards are ground radials & it works good for the
price. It will fit nicely in my attic.
It can be seen here in this online catalog:
Advanced Specialties
Catalog

Hello fellow hobbyists and Companies that give Alpine stereo gear away for nothing!!!!!

You gotta love a company that gives stuff away. Someone might like to suggest to Peter at Newcastle Pro Sound, that when a company advertises Alpine items for $0 AUD inc. GST, that it might not be a good idea for making money.

Sorry, I looked at both the web pages that you mentioned below. Have Uniden improved their receive problems with this little radio?

Cheers
Dick

Rich,
I have Spectrum Explorer ver 8.44 (latest version) and it seems to work fine with my PRO-92 & 2067. Try these steps:

1. Click on the "Configuration" button (looks like a radio with a serial cable under it)
2. Click the "Radio Settings" button - you should see a list of installed radios, if you have any installed.
3. If the PRO-92/PRO-2067 isn't in the list, click on "Add Radio"
4. Select PRO-92/PRO-2067 from the list of radios and click on "OK"
5. Then click on "Done" to close the configuration window.
6. Next, click on the "New Group File" button (looks like a dish antenna) or select "File-New-Group" from the menu
7. You should get a list of installed radios - select the PRO-92/PRO-2067
8. Click "OK"
9. Now you should get a programming window for the PRO-92 from which you can enter data and send it to your radio or extract what you already have programmed in your radio and edit it, etc.

Hope this helps. Good luck. Take care

John

I have not posted a message bearing the name of the person you mention.
Your statement is either a lie or not accurate.

You state "all of us are very aware", please provide me the list of people
you
represent that have approved you to speak for them, so I may specifically
know you are representing. You say "all of us", but I have not seen any
resolution
from members of this newsgroup for you to speak for others, and you
certainly
don't speak for myself or anyone I know.

Regarding your statement of "That's pretty damn signifigant isn't it?", my
answer is
NO, NOT REALLY.

You ask what I have done for the hobby. As a person with multiple
FCC licenses which require technical ability to obtain AND is
employed in the radio communications field as an engineer, I have
contributed much to the hobby. For instance, I have answered questions
about repeaters, antennas, RF transmission lines, etc.

What Fidonet issues are you referring to? I do not remember anything
regarding Fidonet. Wasn't that an old BBS system?

Finally, I state that the only time you post to this newsgroup is
to harass. What have YOU done for the hobby? Please be specific.

I was wondering. Is there anyway to decode MDC-1200. Our EMS units have extended the protocol and added alphanumeric to it. it used to be for just to show that there was a call. But now they are using it more. Very few voice transmissions.

:(

1703. ARC780 software for (U)BC780XLT updated !

Newsgroup: rec.radio.scanner
Date: 2002-08-17 12:37:40 UTC
From: BuTel <nospam@spam.blok>
Message-ID: <ajlge0$t5p$1@news.hccnet.nl>
Source record: 44843
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,aus.radio.scanner,de.alt.radio-scanner,rec.radio.scanner

We have now released version 1.0492 of our popular software for programming and controlling the (U)BC780 XLT.

Minor bugs were fixed and new options were added.

ARC780 is now the only software that enables the 'auto backlight option' of the 780. Backlight will switch on/off when squelch opens/closes while running under Virtual Control.

Virtual control will show the right cellular frequencies for BC780 that are cellular modified.

Other new options:

- info box can be disabled
- extra decrease of cpu load
- program FIPS codes
- ARC780 auto detects 780 model for AFU
- support ctcss/dcs lockout
- virtual control has minimize button that shows small quick view status panel
- virtual control has auto backlight option: switches backlight on/off when squelch open/closed
- virtual control supports service search
- settings for find window are stored
- virtual control correctly displays cellular freq's for 780's that are modified
- fill down / fill series now have ctrl shortcut
- virtual control has button in toolbar
- ARC780 can start with virtual control
- full backup and restore option
- set and upload active scan/search banks, setting is stored in mem file
- software can save virtual control window position

demo / info / screenshots / order at http://www.butelsoftware.com

Regards,

Gommert

If you need one for VHF Hi-band, e-mail me. I have at least one (on 154.430 I think) with charger around here someplace that I'll sell cheap.

Source record: 44751

I have for sale a radio shack pro 34 scanner in excellent electronic condition.

Emphasis is on electronic because the battery door is broken (flops around) and there are marks on the side of the unit.

This scanner picks up real good, has good audio, squelch kicks in a Around 20 - 25% and of course, naturally no gaps!!!!

Items included: one (1) pro 34 scanner
one (1) repaired ac adapter
one (1) standard rubber duck antenna

I will pay the ground shipping charges!!!!!!

First offer over $55 gets it !!!!!!!!!!!!

Sorry only payments via paypal accepted for this one time offer.

You may check my ebay feed back by using the user id jammtc on ebay.

Please make paypal payment as well as inquiries to jammtc2000@yahoo.com.

I will reply to all email within fourty-eight (48) hours.

Thanks,

jodia

Well since you put it that way hehe This so called Moron would Not recommend the purchase of this antenna. You can get the same at rs or maybe anywhere else. Try a discone. they are much superior to what you were looking at.btw Next time supply the actual link to the Actual page that this antenn is on . Not the home page. Furthermore this Moron Lives in Canada where we can listen to our hearts content up here.A La Prochaine(thats French to you for see you Next time)

Probe is the most user driven software I've ever seen. Pretty much
every feature in it came from user requests. The author supports it
tirelessly. Probe will also run quite well on a $50 laptop. <G>

I was just wondering if police scanners will become obsolete in the near future, if, say, police departments go to digital broadcast and are able to scramble the signal, or if they rely totally on computer communication?

This issue comes around again and again like a boomerang - check out the archives for an exhaustive answer, which is short is yes our scanners will become obsolete, but not before your new car is due for the scrap heap from old age !

ya. but we cannot get a canadian model cause we get it manufacturered from the states. but it is weird. our other radios are made in the states if not canada and they are usually unblocked. I am glad we don't have stupid laws like that.

Yes.. They are becoming obselete..
Police are on to activities where ppl use scanners and are dispatched via computer / other methods. Yesterday the police showed up to one of these events unannounced even though there were scanners present.. They also started dispatching via 2 way (FRS) radio (Heard it on mine)

On 8/17/02 5:38 PM, in article 70fae150.0208171338.7d9aa15a@posting.google.com, "CGott" <curtgottler@yahoo.com> wrote:

It has already happened up in Vancouver BC encrypted digital for all except the RCMP highway patrol and one or two fire departments. One trip to the pawn-shops will show you. Two and 3 hundred dolor trunk tracker scanners for $20 to $50 Canadian. I have been advising people that ask me about buying a scanner not to unless they have something other then police and fire to listen to i.e. a taxi driver that wants to listen to calls before shift or a wannabe ham to scan the repeaters.

Hasn't that happened in your part of the Lower Mainland yet Dev? I tried to pawn my base scanner a few weeks ago just to see what I could get for it and most of them wouldn't even conceder it even on Hastings Street. Quote, "we don't want that junk we can't sell it". Then they show you how many radios they have and it is like scanner heaven mostly R/S hand helds but the odd bearcat trunk tracker bases and all well under $100.00. I guess that if they would have made them a bit heaver and supplied a rope then they would make good boat anchors.

Hello, Where can I find a bandplan for Europe, that covers at least
frequencies between 0 and 1650 MHz?
I found a bandplan in www.strongsignals.net, but this is mainly for US, and
I need one for Europe, some segments of bandplan are been worth for Europe,
but others no.

Many thanks

Best regards,

John

1743. RS Patrolman 2026 Key Pad Beep Removal?

I know unit can be modded for cellular, but I'll check for the keypad beep.
It can be removed from most units either by key sequences, or in the case of
that vintage unit, it's usually done by clipping a trace or component lead.

If anyone has an answer to this one, please reply here if possible, as I
also would like to 'de-beep' mine.

Regards,
Pat, VE3PMK

If you get the opportunity, compare the ICOM IC-R2's audio side
by side with another model.

The IC-R2's audio is better than most of the
other portable scanners I've tested in the last 7
years. The Relm HS-200 and Racing Electronics RE2000 Alpha
models have excellent audio, as well.

I agree the R-2 has good audio, especially for its size. But, the
Pro-92 has the best audio of any HH scanner or HT I have/had.

Wow. I never knew that every single evemt involving a US military or NASA vehicle was the result of those pesky Russians. Not only that, but every "natural" phenomenon such as earthquake, flood etc too. Me, I'd love to know how a country that cannot even afford to pay it's military personnel can afford the electricity.

You missed out some other "proven" attacks of Russian EM weapons - what about the storms, hurricanes and bad winter snows - obviously EM weapons in "climate-change" mode.

I am also quite prepeared to believe that the election of "Dubbya" was the result of some kind of foreign interference, maybe EM directed brainwashing or mind-control.

By the way, if it's all these pesky Ruskies doing this EM stuff, then what is that great big array in Alaska irradiating the atmosphere for? Peaceful climnate study, I think not!

Source record: 44790

I've recently programmed a 42-50 Mhz Motorola Maxtrac to the 6M amateur band. I used the modification on the "Batlabs" page, adding some solder to get it to transmit beyond 50 Mhz. It helped, but only to the point where I can get full output to about 51.6 mhz. Beyond that, the power folds back to about 20W. Does anyone know of any modifications that can be done to extend the coverage by another 1 Meg or so? How about any other web sites that discuss the issue? Please, if you can help, drop me an E mail at njscan@lycos.com Mt ISP is having issues with USENET so I can't always access it. Thanks

What you want is an ITU Region 1 bandplan.

It'll only be any good up to about 140 MHz, as after that,
apart from a few allocations, it's pretty much up to
individual administrations what they do with their
VHF+ spectrum.

I have a ASCII textfile somewhere with all this
info. If you request it via the group (preferred) or by
EMail, I'll try to find it. But see the next post down
from Alex Wood.

Here in Oklahoma, most traffic is still VHF-high, A few of the larger cities have UHF, and there are only about a half-dozen trunking systems in the entire state.

Pawnshops NEVER offer much for electronic equipment, that's a given. However, a decent scanner will sell fast at most pawnshops around here, and bring a pretty good profit for the shop.

If anyone knows of a mod (unless of course mine has been faulty from
purchase XX years ago !) for the same scanner to enable the thing to hold
the memories for more than a day or so when disconnected from power source,
I'd be obliged if they could share it please.
Good Listening,
Dave.

I'll say it again, If Bill Cheek didn't do it with PC's and the 2006 it will be sometime if it ever happens. All the fools think it is cakewalk and politics will stop it dead.

Also see
http://www.lansley.com/radio/radiospectrum.asp
which is a good interpretation of the 'official' UK frequency allocations.
Below 30MHz this is valid for Europe in general, and a good guide to
international use at higher freqs.

1780. NewBee Icom R3 question

Newsgroup: rec.radio.scanner
Date: 2002-08-19 00:24:44 UTC
From: JayVee1954 <zjlv16@worldnet.att.net>
Message-ID: <gVW79.18780$Ke2.1534813@bgtnsc04-news.ops.worldnet.att.net>
Source record: 44720

We have just purchased a Icom R3 replacing a Uniden Bearcat SC150. We were excited about getting a better quality scanner with more capabilities than the sc150 but were very dissapointed to get very very poor reception in the 900 band and nothing at all in the 2400 band. The sc150 was rx'ng many stations in the 900 band very clearly and the Icom R3 didn't even pick them up. Since we got nothing in the 2400 band we tried scanning that region with our 2.4ghz phone in the same room and still nothing at all.(yes the wifey was talking on it, hehe) We were using the telescopic ant that came with the R3 and also tried the telescopic we use on the SC 150 with the same results. Anybody have any ideas on this, or did we just throw a few hundred dollars away on a piece of crap? tia --- JayVee

While WBCQ was transmitting RNI with
John P Lightning at 9:55PM They went off the
air due to Transmitter problems. Now there's
a guy with a falsetto spanish voice, and female
and someone on SSB transmitting in place
of WBCQ (..sounds like some
AM'ers I hear on 75 Meters....Hmmmmmm...)

I would suspect that your 2.4 GHz phone is spread spectrum or frequency hopping. In either case is unlikely you will stumble acrosss the signal while searching with your R3. If you do you will not be able to understand or decipher it as it will be a digital signal.
The 2.4 reception in the R3 will require a very strong signal or that you be very close to a signal to receive it.

I have a feeling that it will be quite some time before that happens. My neck of Michigan is just now beginning to test their APCO 25 system. In essence, it's a complete flop around here. The terrain is very hilly, fairly thickly blanketed with trees, the ground is full of iron ore, etc. They are having major problems with reception of both the control center in the vehicles, as well as the vehicles in the control center. One of the towers a few weeks back completely failed all together.

I have a feeling it will be a LONG time before they even come close to rely completely on the digital system in this area... Thus, I have no fear that my scanner, and any I purchase in the future, will serve me for a long time to come...

Absolutely! If you're at all into DXing or just listening, when a station uncharacteristically disappears it is pretty usual to want to stick around to see when they come back, if they report what happened etc. In this case, they did come back at a lower level (here in CT. as well). I didn't keep listening just to the two voices that assumed the frequency while 'BCQ was off, but I kept cooing back until I found them back on the air.

The best time to listen for curious SWL activity
is *exactly when* a high-profile radio program
like RNI goes off the air unexpectedly. Such
times often reward the casual listener with a
rare or unique catch, and sometimes even a QSL
collectable if it's a genuine pirate station
who gives out a p.o. box for the same. As you
learn more about the hobby of shortwave listening
Kent, you will grow to appreciate such rare events
as this.

I want to sell my Radio Shack PRO-2042. It's a European model converted for U.S. voltage. It has an Opto OS-535 and PROgrammit interface built in. All of the work was professionally done.

It receives all of the freqs you'd expect, including the ones that it's not supposed to receive (using either the scanner or the "liberated" OS-535.

Fully computer-controlled, with Probe 6 (also included). The PROgrammit allows you to upload from Probe, CVS and other databases directly into the scanner (you can program 1000 channels within seconds).

It's in mint condition. I've had it a 2-3 years but hardly used it. Lost interest. Need some dough for my next new hobby. Will throw in cables, software, freq books and whatever else I have lying around.

If someone can tell me what a reasonable asking price is, for seller and buyer, I would appreciate it. I'd like to stick it on eBay after that (assuming they don't bug me about the 800 Mhz capability). Thanks.

Yes please post that list as I am interested in a Handheld that has CTCSS,
but I don't really want to pay $400. I was looking at the Uniden SC200.

Hi,

I am looking to replace my current handheld scanner, and I was hoping I could get your opinions on the Icom IC-R3, I like the idea of receiving video as well as audio. But I don't see a numeric keypad so was wondering how you enter frequencies, also what is the searching like, can you specifify a start and an end range to search?

Thanks

Hi Fred

My email address is not very neat. Then again, I don't attack Mr Bush - I just dare to question the direction in which he is leading us. Unfortunately it is "us", since Mr Blair just does as he's told, as do most of the other NATO leaders. Wonder why. Is that a small globe of white light I see above 10 Downing St.....

Alec

PS For those Americans with a similar knowledge of other countries to their president, I'd better explain that 10 Downing Street is the residence of the British Prime Minister, who is called Tony Blair - short for "Anthony" by the way.

Indeed they probably do exist. I think what people have a problem with is the idea that every "natural" disaster and every event involving loss of US military personnel is down to Russia, which is now basically a third world country. If these weapons do exist and are in use, it is most likely that they would be in the hands of the worlds richest country, not one of the poorest.

That said, I don't believe that the US have yet perfected such a weapon, if they had we would all know about it. America's "national security requirements" would have required its use on all of us by now for daring to question "Dubbya".

That's easy. First they apply to Washington for 'Favored Nation
Status' then they apply for a massive loan and poor Joe Public, right
across America, ends up footing the bill.

Same as usual.

I have been considering this scanner as well. But, I have done some
research, and not all of it possitive. Most say the video portion is crap.
It eats batteries like nothing else, I guess with the large color LCD
running, one can expect approx 1.5 hours of use, then approx 15 hrs to
recharge. They also state the supplied charger doesn't supply enough amps
to run the Color LCD while charging. It can use AA batteries as well, but
they get even less time.

Most reviews I have read state that one most be within a very close range
to view wireless cameras and such.

As far as the programming, I read it is rather difficult as well, without
the aid of a computer. Strong signals has a very indepth review on their
site.

But, even with all the bad reviews I've seen, I'm very much interested in
hearing what anyone here has to say about the scanner.
I hope all who have can post some type of answer to this query.

If you don't require CTCSS, another choice
is the Yaesu VR-120.

It is being closed out for $109 at several
dealers because Yaesu is replacing the VR-120
with a VR-120D model.

I own both a VR-120 and IC-R2 and like them both,
though I find the VR-120 easier to use because
it has "real" volume and squelch knobs, alpha labels, and a larger
display.

Check out my free tk120 cloning software at http://parnass.com

Also, check http://www.dejanews.com for recent postings
about the VR-120 vs. IC-R2.

That did it! Snipping the "beep" line on the middle header of the CPU board indeed stops the beep, and then I put a resistor network in there using a 470K and a 100K inside the unit. This lowered the beep to a much more acceptable tone.

Special thanks to Squeeze for posting the answer!

what is a good 6 meter antenna design. I wanted to build a 6 meter antenna. I don't like the j-pole. it didn't work well for me. I would like to build one that is low profile. I did see a dipole that looked nice. not that bad looking. I just would have to find a cheap source for the fiberglass whips on that design. If someone made a good 6 meter antenna that has half decent gain. It doesn't have to be totally low profile. But. not a eyesore either.

Thanks

If your running FM, the Cushcraft AR-6 is the way to go.
I've been running one for about 6 yrs and does a great job.
I believe its rated at around 3db, I used to use a VX5 with the AR6 and
worked into Canada and Tx, so if you need a veritcal its the way to go, and
its cheap.

Anyone who went to this site should check their system. My anti-virus
software gave me a warning as soon as I opened the link.

Maybe just a coincidence.

I plan on buying a new scanner in the next few months.
It will be replacing my BC3000XLT. I prefer a handheld and one that I can
hook up to my pc. And under $400.00
Please post your suggestions
Thanks

Well it appears to be a simple ground plane vertical antenna with some extra elements attached to the vertical element to make it somewhat biconical. I'm not sure if the antenna would be particularly more wideband than a regular vertical. It would be interesting to build an antenna like this to experiment with, but you'd probably get better bandwidth with a bicone or discone.

You wouldn't make a profit out of that though would you. Anyway, don't get the idea that there was any kind of moral portion to the US decision to enter the war. America has and only ever will act when it's own national (read financial) interests are at stake.

1825. Trunk Tracking Anomaly?

Newsgroup: rec.radio.scanner
Date: 2002-08-19 22:23:34 UTC
From: Mountain Bob <rtiberiNOSPAM@csusb.edu>
Message-ID: <3d616e73.14863223@news.calstate.edu>
Source record: 44664

I use a RS PRO-93 with text tags to monitor the many local agencies that have all banded together. This unit was upgraded by RS to fix the "text tag" bug.

When I actually sit down and watch the display, I find many frequencies showing up despite the fact that they were not programmed. If I press "manual" the regular control freq is displayed as I would expect.

Has anyone else encounted this? Is anyone willing to explain why this happens?

That was the feeling around here that it would never happen. Then one day nothing on the police channels. A year later nothing on the Fire frequencies and a year after that nothing local on the Provincial Ambulance. One of the ways that the police out here did it was to use all of the existing cell-phone sites. I don't know if you realize what the West Coast Mountains are like but picture Seattle on steroids and you have Vancouver BC now all emergency services police, fire and ambulance are encrypted digital. I was talking to a cop friend and he said that they got a guarantee from the company that installed the system, (I think it was Erickson but don't quote me on that) that it is un-scanable. It is an expensive system go get running but once they do then adding more users lessens the cost. I had a good laugh the first time I heard the story on the news, (the news media was pissed and tried to block the move saying the had the rite to listen) but within a year of the story the police were gone. All of the cops I talk to just love the system and say that they have had no dead spots and wouldn't go back to the old analog system again. That is all that your cops have to do is use the existing cell systems and put encryption on it and their off to the races. I guess that what I am saying is that a long time maybe only a year or two.

I know that a friend of mine has a scanner that he got to listen to the fire department and chase fire trucks from a pawn shop for $25.00 just before our fire dept. went digital and now no pawn shop will touch it so I do think that he is giving it away. It isn't what your looking for, (only 10 ch R/S) but the price is most likely right.

I would probably do some vertical work. I like a challenge of contacts :)
local 2 and 70 repeaters have almost nil activity here. We just got a few
more repeaters up. But no activity there either. I think I have heard maybe
10 qso's in 3 months. This is of 190 000 people in this community. about 300
or so hams. very strange. They have 3 irlp nodes locally. Quiet too. so
till I get my code. I can hope to do a bit of dx'ing when there is
propagation. lol. Only time will tell. The dx windows doesn't happen often
in this part of British Columbia. When it does. It is nice. Thank you for
your reply.

lol. that is what they can thank telus for. but telus still sux. Gee when their terminals go down in their car. They got to call a telus rep to get their username reset. Sorta a pain if it happens all night. I heard here. They finally installed the GPS systems so they can track the cars. Watch where they are driving. sorta like the states have in those new cars. I forget the name.

It's "top of the heap", as far as little scanners go, but it has it's faults:

Scan speed not all that fast.
Has the Icom (ALL ICOMS DO THIS) scan one bank of channels or ALL channels scan arrangement.
"Icomspeak" instruction manual, once you figure it out, it's not that hard to use, but it takes a while. Icom calls everything "scanning", not search, scan, etc, and it's odd and confusing at first.

The Yaesu VR120 is being closed out right now, it has it own set of faults, I didn't get one due to intermod here at my home, the R2 doesn't do it. Check out www.strongsignals.net lots of great info there..

Source record: 44671

An 800 or 900 MHz Motorola trunking system can operate with up to 28 frequencies. Up to 4 of these can be Control frequencies. In the PRO-93, with a MOT 800/900 MHz system, you only need to program the Control frequencies, the radio will automatically figure out which of the up to 24 remaining frequencies to tune to, when a transmission occurs on one of those frequencies. The BC780 also has this capability.

The radios cannot do this on EDACS systems and MOT systems at other frequencies.

1832. Icom r-7000 vs. Bearcat BC785D

Newsgroup: rec.radio.scanner
Date: 2002-08-20 01:13:36 UTC
From: Zippo <Zippo@nope.com>
Message-ID: <pd53mucar05po3kti8v88jhiocr494vohd@4ax.com>
Source record: 44672

Hey guys, which do you think is the better deal? The R-7000's sell for between $500 - $600 range. I know they need a special RS-232 interface for a computer connection. Any other downfalls for the radio? The specs are impressive.

The Bearcat is (will have/be)"Trunkable" with a built in RS-232 port and digital capable. The price range, from what I've seen, will be in the upper $300. range.

Anyone out there than an R-7000 and a BC780? I believe the BC780 is very similar to the proposed BC785.

Mucho Thanks!

I just purchased this scanner from grove enterprises last week. It was to replace a Uniden sc150. The reception on the R3 is very poor at BEST, and I mean that. Specifically the 900 band on up does not rx anything, while the sc150 is rx'ng very clearly in the 900 band. I can find a freq. on the sc150 that is coming in very strong and manually go to that freq with the R3 and I get nothing but hiss. I obviously turn off the sc150 before I try the R3 as to not cause interference. I have tried the antenna that came with the R3 as well as the ratshack one I use on the sc150 and also the discone from ratshack I have on my roof. Still no rx 900 on up. I e-mailed Icom tech support about the problem and their reply was that to recieve frequencies in the microwave region I will need a good microwave antenna. They did not even address the fact this thig won't get anything above 900. BTW the TV tuner does work on the network stations, I haven't had a chance to try other video sources yet, but if the reception I'm getting is any indication of the quality of this unit that will probably be for shit too. Frequencies in the 40.mhz band and down are poor compared to the sc150.

Its a great little radio... I suggest getting the software and data cable
so that you can program it from your PC or Laptop. It makes it much easier
to program!

>
>

Basically, the 785 is a 780 with a digital decoder card in it, other than that, it's the same. The 785 will be probably at least $500+ (with the decoder card, without it, probably exactly the same as the 780 is now.

The 7000 scans really slowly, but will ~probably~ receive slightly better than a 780, if the 7000 is aligned properly. You have to remember that some of the 7000's out there are over 15 years old, and they may have age related problems (capacitors failing, display issues, etc) parts MIGHT not be available.

The 7000 is not much of a scanner, even with PC control, the 7100 is a little better, but still no rocket. The trunking abilty of the 780/785, along with it's huge speed advantage, make it probably the better choice.

I myself think it is up to the person if they like it. Some say the R2 sux. I loved the R2. Others said the icom pcr-100 sucked. I thought it was ok. With the discrim tap, it was great. I have owned other radio's. I loved my ft-800r, with mod. The one that isn't listed properly. Other say the pro 2045 is a nice radio. I think it is ok. but after so long, you gotta take the stupid metal sheild off the RF part due to internal harmonincs. works well for ctcss and discrim. RS 242 mobile is a great radio, after the mod. better. people said the htx-202 was a durable radio. I found that it is a good radio. But, the solder connection to the center pin on the BNC connector was a defect in all radio's. it comes off the board. Instead of me babbling. I think it is up to the person if they like it or not. Even if I see soso reviews. I still if I had the cash on hand. I will still by the R-3 unless there is another radio out there. A rx ham video circuit looks my way too. If we all stuck to reviews. Not many would buy radio's I don't buy Uniden or RS cause they are US made. Sorry. I don't mean US, US made. I mean witht he blocks and such. I like radios that have the full spectrum. Cell can be blocked cause I don't care. I feel that since I am canadian that I should be able to have our bandplan.

73. everyone to their own opinion.

I thought they passed some stupid law recently that bars you from receiving
DTV programming?
I guess this would not actually bar you from the frequencies however as the
canadian birds are on the same freqs?

The R-7000 doesn't trunktrack, is MUCH larger, doesn't work well for mobile applications, doesn't have an alpha display, and many other points.

It's a good radio for playing with, but it's not for serious listening to PSB channels.

That's not fair old son. I may have fun tweaking their tails a
little, but I like Americans and always enjoy my visits. They're a
generous people.

Don't judge them all by the odd loud-mouthed politician, we have just
as many of those over here.

>America has and only ever will act when it's own national
>(read financial) interests are at stake.

There's nothing wrong with that. When you get down to it,
national/financial interests, are usually the cause of wars.
We do - and have done - exactly the same over here.

Nick.

I have my Uniden BC780XLT for sale. I am going on a trip and need to sell it ASAP. Paypal preferred. my ebay feedback can vouch for my reputation (over 250) The unit is in 9/10 cosmetic shape, some very small paint drops on it from remodel (they will be gone upon shipping) 10/10 electronic condition. I will include manual, serial cable, power supply, 2 antennas and original box. I leave wednesday late, so today is the last day available. I will sacrifice for $300 shipped conus (lower 48). Photos upon request.

Wait until November with the BC 250D comes out. 1000 channels, covers
MilAir and everthing else. If you don't want the digital card it will
less than $350.00 and you can always buy the digital card at a later
date when and if you needed.

They want to stop us from decoding the signals from "Grey market"
American DTV sattelites (ie: buying the US sat. receivers) as they
violate the thought polices "canadian content" rules for television
here, but we are fully in our right to receive the frequencies (they
do not give a rat's ass about the fact that most US DTV receivers here
use pirated cards and are defrauding the US DTV companies) .

Of course living near the US border and getting all the over the air
US broadcast TV stations is ok with them... go figure. You know
something is wrong when the Canadian DTV providers are of such bad
quality that they need to pass protectionist laws to prevent us from
getting American DTV receivers.

Hi Douglas Brown:

While not silver; perhaps saw the plastic Tiger Scan TSA.
It's VHF only, but somewhat pocket sized. (See on Ebay).
We still have them in almond also, with the usual accessories.

Have not had a huge demand for these in recent months;
possibly due to no marketing. Nevertheless, if you have
further questions, please feel free to contact me.

Sincerely,

I'm not sure if this is what you are talking about, but I know that all the new GM brand of cars (since 1999) have little "Black Boxes" (EDR's; Event Data Recorders) in them that record numerous things about the car (5-seconds before the actual accident/crash happened) like the speed of the vehicle, whether the brakes were applied, throttle position, etc. More advanced units are being tested in police vehicles. These units actually relay the data back to the 911 dispatch center (over cell frequencies I assume) in an event of a crash/accident.

This is not only in public service vehicles, but also in cars that are sold to the public. GM has been putting them in cars since the 1996 model year...

There is an interesting story about it here:

I just got a new Yupiteru 7300.
But I got a newer version of the radio and an older type of manual, because
a key function is missing in the manual.

Can someone who have an 7300 tell me how to use the function on the . button
labeled DUP?

I picked up a referb from Uniden store for $300 a week ago. It works
and looks like new.... having said that I wouldent sell it for $300
either.
